There are few articles of farm produce which are so easily affected as eggs by a damp, foul atmosphere, and the extremes of heat and cold. The shell of an egg is exceedingly porous, and when the place of storage is too warm and dry the albumen evaporates, and when too cold and damp the egg seems to lose its vitality and rapidly becomes stale. The porous shell also admits of absorption, and a single rotten egg will contaminate whole dozens of eggs in the same package. The almost universal custom now is to ship eggs in cases expressly prepared for the purpose. This system of egg carriage, which was designed simply to prevent breakage, has done a great deal to improve the market quality of eggs. They do not come in contact with each other, and after they are once packed no amount of knocking about will addle them.

The system of inspection is called "candling" and the method may be described as follows: A dark room is provided, or a corner is curtained off from the store, in which no ray of sunlight is allowed to intrude. Within the enclosure a single candle, oil lamp or gas jet is provided so that the "candler" may face it conveniently and have the light on a level with his face. If the lot of eggs which he is to inspect is known to be a good one, that is, having come only a short distance, and from a person who has a good reputation, the operator grasps three eggs in each hand from a case at his side and quickly passes each egg between the light and his eye. Those which are good have a clear transparent shell and a vividly rosy light shows through them. An egg which is perfectly fresh seems to carry its freshness with it and appeals to the favor of the sight at once.

A rotten or addled egg is perfectly opaque, black in color and is detected at once. Not so with those which are a "little old" or, having remained on one side for a considerable length of time, begin to show signs of decay. In these cases a small, sometimes a very faint black spot is seen and to the quick glance of the inspector this is enough to condemn it and consign it to a lot which is to be eaten at once, probably by the customers of cheap restaurants and boarding houses. In no case where the least sign of decay or age is visible, is the egg placed in the receptacle set apart for those of the first quality and known as "fresh." Should the consignment be found to "run bad," or come from a long distance, the inspector goes about his work in a much more deliberate fashion, for experience has taught him to be conscientious, and his work is much more difficult. In this case he only handles two eggs at a time, one in each hand, and the process is necessarily slower, more careful scrutiny being necessary.

With the best packing and the utmost care some eggs in every case or package are sure to crack. These the candler places on one side, generally with those that are slightly damaged or old, and all are sold together. In making his returns for the consignment the rule is for the dealer to allow one-half price for these, and this rule is found to work quite satisfactorily. In Chicago and some other markets "egg candling" is followed as a regular business by men who have become experts at the trade, for trade it really is. These men charge a regular price of ten cents per case of thirty-six dozen, and when they are at work are enabled to earn as much as \$3 per day, or even more. In Boston the inspection is done by some one in the employ of the seller or by the seller himself, and no charge is made for the work. It may be safely said that our dealers as a rule are conscientious and furnish their customers with only fresh or first-class eggs. There are some, however, who do not pretend to be honest and only seem to care for the immediate profit. These men are soon well known and should be avoided, not only by the consumer, but also by the shipper. A shipper's reputation is quickly known by all the dealers in the market. They exchange notes and compare, one with the other, their observations on the quality, style of package and general qualities of merit or demerit of the different shippers, and will take nothing which comes from a man who is not considered by them first-class.—*Cultivator*.

Pure Bred Fowls.

The editor of the *Poultry Monthly* says:

Our experience compels us to say there is no stock as productive as our thoroughbred, because they have been bred in accordance with a system, and with the object in view of producing qualities of great excellence. It matters not what branch of the poultry trade you breed, the fancy varieties for sale or exhibition, the heavier kinds for the food market, or the medium size for their eggs alone.

Under the very best management, our pure bred invariably give better satisfaction and prove more remunerative than fowls not bred to any degree of excellence. But it is with this as with all kinds of stock, or engaging in any enterprise or occupation, the interest and pleasure that is awakened by the first step in the right direction goes a great way to gain in much shorter time the experience necessary to success, which only could be gained through years of arduous labor and attention, if the wrong course were pursued in the beginning.

Poultry keeping can be made an auxiliary to other pursuits without infringing on the time of the keeper, and will bring in a quick and handsome return for the food and care given them. It costs no more to feed and keep a flock of improved fowls than it does the commonsorts. It is a waste of time and money to breed from poor stock, and it is the poorest economy to buy poor trash, though represented to be as good as the best. Those who have turned their attention to breeding and keeping up the character and excellence of their fowl stock, have satisfied themselves of the importance of keeping good birds, and know that the higher the quality the better the results, and that they never will be, in our generation at least, a drug in the poultry market.—*Live Stock Journal*.

The brown Leghorns I find to be the best layers; and of all varieties there are none at the present day receiving more attention than the brown Leghorn. I find them to be far superior to the white Leghorns. In color they have a decided advantage over their white brothers, who always look as though they were afraid of soiling their white coats, and look pale and sickly. The brown Leghorns have a dark, rich colored plumage, which makes them very attractive and perfect beauties. I would never exchange mine for the white.—*Journal of Agriculture*.

THE GUN.

The Pike County Coon-Hunters.

"I tell you I miss Uncle Billy C. Jagger of Delaware township," said the Sheriff. "Poor Uncle Billy! He's a good way now from Pike county—and especially from Delaware township."

"Yes," assented the County Clerk, "You're right, Sheriff, for if Billy C. ain't in heaven I wouldn't give much for the chances of some other folks I know."

Uncle Billy C. Jagger was a Pike county character—an honest, sharp-featured little man; one of the numerous and easy going family that lived down "back o' Dingman's." Uncle Billy had a shrill piping voice and a most comical way when he talked of emphasising and punctuating his words and sentences. Added to this, he preluded and interluded his remarks in a high falsetto hum which seemed to come clear from the top of his head. He had a good wife whom he called mother, and a runaway horse named Betsy Baker. He was known from one end of the county to the other, for he had followed his side-splitting little red nose into every corner of it. He had been either a witness, a jurymen, or a litigant at every term of Pike county court for forty years, and when he died a few months ago, one of the old landmarks went down.

"I can see him the way he used to come in here court weeks," continued the Sheriff, "and I can hear him now. No tuning fork that ever gave the pitch in a singing school could get within four inches of the key Uncle Billy humed on. 'Hum, hum, hum, h-u-u-m, hum,' he'd sing, and 'Whell, gen-til-men,' he'd say, 'Whell-yum C. Jagger, of Dellywar township, is ketchin' on the jokey. Hum, hum, h-u-u-m hum. He's ketchin' on the jokey, gen-til-men, he'll try a little Boorg'n. Hum, hum, hum, h-u-u-m, hum. A little Boorg'n an' the best you have, sir. Hum, hum, hum, h-u-u-m, hum."

Uncle Billy used to say, 'some folks is partial to rye, but give me the good ole Boorg'n.'

"If anybody has a lively recollection of Uncle Billy," said the ex-District Attorney, "You know why, for I guess you'll all heard how he and I captured the coon down by the Hyman Westbrook place, a few years ago. You know I was on my way to Stroudsburg to meet the judge and some of the biggest lawyers there were in the district, on some law business, and I was togged out in the best suit of clothes that three years in the District Attorney's office could produce, including a new high hat. I had got down just this side of Hyman Westbrook's, where a big chestnut tree stands in a field near the road, and I saw Uncle Billy C. standing in under the tree and looking up among the branches. Betsy Baker and the lumber box wagon stood in the road. Now it was a peculiarity of Betsy Baker's that at one time you might fire a cannon off in under her and she'd never move, while at another time if a rooster should crow a hundred yards away she'd string things from Dan to Beersheba.

"Well, I stopped my horse opposite Uncle Billy. He never took his eyes from the trees, and I could hear him humming. 'Hallo! Uncle Billy!' said I. 'What is it? What's up the tree?'

"'Hum, hum, hum; h-u-u-m, hum,' said Uncle Billy, without looking around. 'Whell,' said he, 'it may be a catty-mount. Hum, hum, hum, h-u-u-m, hum, and maybe it's a bear. Hum, hum, hum, h-u-u-m, hum. But my belief, is sir, that it's a coon, sir. A great fine coon. Hum, hum, hum, h-u-u-m, hum.'

"Well, Uncle Billy," said I, on my taps in a minute, for you know if there is any one thing I do like it's hunting a coon; 'if there's a coon in the tree,' said I, 'we must try to get it out.' So I jumped from my carriage and stood by the old man's side, and peered up into the tree. Sure enough, half way up the tree, in plain sight on a branch, lay a big coon, looking as fat and sassy as a nigger baby playing with the griddle greaser. I had a small revolver, and I whipped it out in a minute. Uncle Billy had never lowered his eyes once, nor moved his head a half inch. As I took aim he piped:

"'W-h-o-o-a, Betsy Baker! Hum, hum, hum, h-u-u-m, hum.'

"I fired. Betsy Baker never moved, and Uncle Billy never turned round to see whether she did or did not. The coon climbed higher up the tree. I fired again, and the coon got up still higher.

"Hum, hum, hum, h-u-u-m, hum, hum," sang Uncle Billy. "Whell," said he. 'It is my impressing, sir, that your battery does not carry guns enough, sir, to bring down the coon. Hum, hum, hum, h-u-u-m, hum. I have heard, that coons can be shook out of trees climbing the tree, sir, and kicking on the limb. Hum, hum, hum, h-u-u-m, hum. Kicking hard, on, the limb.'

"I was full of the excitement of the chase by this time, and Uncle Billy's hint was no sooner made than I was shining up that chestnut tree like a bear after a bee's nest. I forgot all about the Stroudsburg judge and lawyers, my good clothes and my new high hat. I was reminded of the hat as I drew myself up on the bottom limb of the tree, for it was caught plumb on the top by a branch above me, as I rose to my feet, and shoved down over my eyes in less time than a steak of lightning could skin a catfish. I pulled it off. It looked as if a yoke of oxen had rolled over it, and I dropped it to the ground. It was a hard job to crawl up through the branches, and when I got within reach of the coon I was sweating like the bottom slapjack on the platter, and I felt as if I had been toyed with by a mad bull all over a ten-acre lot. I fired the rest of my cartridges at the coon, but it just laid there on the limb and grinned at me. That made me mad, so I crawled out, and, at the risk of dropping fifty feet to the ground, I gave the coon a kick longside the jaw that lifted it clear off the limb. It lifted me clear, too, and we both left the branch together. I flung one arm around the limb as I went down, and saved myself. I hung suspended in the air. As the coon went down he made a grab at me, and set his teeth deep enough in the calf of my leg to save himself. And there we hung. I on the tree and the coon on my leg. As I kicked and wriggled I could see Uncle Billy C. standing below, just as immovable, cool and deliberate as ever. You should have heard him give directions.

"Hum, hum, hum; h-u-u-m, hum," said he, 'Whell, sir, you, have him, now! If I was, you, sir, I'd raise my other foot, and lift him a good 'un, on, the snoot. Hum, hum, hum, h-u-u-m, hum. A stiff 'un, on, the snoot, sir.'

"And I did give him a stiff un on the snoot. The coon had to drop, but he took a mouthful of my leg with him. The fall broke his neck and killed him. As I struggled to draw myself on the limb Uncle Billy picked up the coon.

"Hum, hum, hum; h-u-u-m, hum," he sang. "Whell, sir, he is a fine one. Hum, hum, hum; h-u-u-m, hum. As five a one, sir, as I ever see. He will weigh not less than sixteen pounds, sir. Hum, hum, hum; h-u-u-m, hum. Not an ounce less, sir."

"And Uncle Billy deliberately carried the coon out to his

wagon, chucked it in, climbed up to his sheepskin seat, and drove off without another word, leaving me sweating, bleeding and tattered in the top of the chestnut tree. When he had gone about a hundred yards I saw him hold the coon up by the tail, as if satisfying himself as to its heft once more. Then I shouted:

"Uncle B-i-l-l-e-e!"

"Just then Betsy Baker took it into her head to run away, and down the road she went, lieky-ty-hindle, and I saw Uncle Billy no more. Well, there was hardly clothes enough left on me to wipe out a shotgun with, and I believe a tin-peddler refused to give my wife a 3-cent tin cup for the whole suit some time afterward. I had to drive back home thirteen miles and put on other clothes before I could go on.

"About a week afterward Uncle Billy came into my office, deliberate and very angry.

"Whell, sir," said he. 'Hum, hum, hum; h-u-u-m, hum. By shonting at Betsy Baker from the chestnut tree, sir, you caused her to run away. Hum, hum, hum, h-u-u-m, hum. She broke a thill, sir, to my best wagon, and now, sir, you must pay me \$1 63, sir, or I will lay you on the shelf, sir, in the next election in Dellywar township!'

"I settled with Uncle Billy for three Boorg'ns, and that's the way he and I captured the coon."—*Cor. New York Sun.*

A GOOD EXAMPLE.—We are glad to note the fact that the supervisors of Yolo county are taking an interest in the preservation of game. Like many counties Yolo has been overrun by a lot of men who make a practice of slaughtering deer in and out of season without regard to the laws of man or nature. The supervisors of the above mentioned county have passed more stringent laws and now offer rewards, for information and the conviction of the lawbreakers; thus, working in conjunction with the Sportsman's Association, the deer hunters will find the soil of Yolo county too hot for them to follow their unlawful pursuit. What is the next county to be heard from.

On Thursday and Friday of last week Mr. C. W. Kellogg, and Mr. Wm. Anderson were at Teal station preserve and had very good shooting. In the two days shooting 116 birds were killed of which 34 were "cans," the rest mostly sprig and teal, and all the birds were in the very best condition. Mr. Kellogg had the good luck to bring down three large swans at two shots, hitting one with the left hand barrel and two as they came in line with the right. He used only No. 6 shot; these are the first swans killed though many have been shot at this year on this preserve.

Last Sunday Mr. Ramon Wilson and Mr. Crittenden Robinson were at Sherman Island and between them bagged 50 ducks, a great many of which were canvasbacks. During the day Mr. Wilson getting ready to get out of his boat did not select a very good place to alight without soiling his boots. The place he selected was in the middle of the pond in quite deep water. It is just as well to say that he alit without premeditation and got slightly moistened by coming in contact with the aqueous fluid. Folks will not know then that he got a "ducking."

There is fine bag shooting on the edge of the Suisun marshes. When a good position is secured early in the morning and the decoys anchored out, one can have all the shooting desired. A great many "cans" have been killed in this way.

Quite a large party were at Warm Springs last Sunday. The whole party bagged about 90 quail. The best bags were made by Messrs. Putzman, 23, Rondeau, 23, and Staekpool, 17. Quail are very scarce in this vicinity.

There is a rumor afloat to the effect that several parties are about to lease a tract of 700 or 800 acres of the marsh land at Alvarado. It is expected that this will be made into another game preserve.

Hunters at Sherman Island had rather poor luck on Sunday last. The same may be said of the Teal station preserve; several were up but indifferent success they met with.

Mr. Chas Kaeding was over at Point Reyes this week shooting quail and snipe and had very good luck; he reports hunting in that vicinity generally good.

C. T. Precht was at Baden station last Sunday shooting on private grounds and brought home 24 as fine English snipe as have been shot this year.

Thanksgiving Day many members of the Teal Shooting Club were at their preserve. We have not heard what success they met with.

The shooting up the rivers generally speaking is poor. The last small showers seem to have battered ducks over the hills again.

Last Sunday Frank and Fred Walton found pretty good shooting on the Suisun marshes; they bagged 48 snipe and 36 ducks.

Messrs Brooks and O'Farrel were recently hunting on the San Joaquin River and returned with 28 ducks.

Fred Maskey says that quail shooting on Walnut Creek is about played out.

In a strong article in favor of the system of ensilage, the *National Live Stock Journal* says: "Green fodder corn, in its best condition, is very similar in chemical composition and food value, per ton, to turnips; and the meadow grasses, in their sneeulect condition, have a value nearly twice that of turnips, per weight. If, then, green corn and green grasses may be preserved, in all their sneeulect, for use when green feed fails, these may fully take the place of turnips and other roots in the growing as well as fattening ration. These grasses, thus preserved, must have even greater significance in our future system of feeding than turnips in that of England. The grasses, preserved in their green and succulent condition, are far superior to turnips, in the fact that they furnish a complete ration, and cattle may be properly fed on these without the use of grain. Grain or concentrated food, however, in moderate quantity, may often be properly fed upon good pasture, when the most rapid progress is desired, the animal being able to digest some concentrated food in addition to all the grass its stomach can utilize."

Several of the cattle of a herd exhibited at the Jackson and the Grand Rapids, Mich., fairs last month have since died. A competent veterinarian has since been ordered by the United States Treasury Cattle Commission to investigate the matter.

Anderson & Findlay, Lake Forest, Ill., have sent to Scotland to get twenty or twenty-five of the best Angus cattle money will buy from the highest-bred herds there. They have now one of the best herds in America.

THE RIFLE.

National Rifle Association.

The regular meeting of the Board of Directors of the National Rifle Association, was held on Tuesday, Nov. 14, General Molineux in the chair.

Colonel Bodine, from the Committee on International Military Match, reported that the committee was in a fair way to obtain a good and satisfactory gun, but that ammunition was, as yet, imperfect. They were still experimenting on shells and bullets. The Colonel then asked that the board empower the special committee to purchase a sufficient number of guns from the Messrs. Remington & Sons, stating that even if the order was given at this time, it would be close upon three months before the rifles would be ready for delivery, and that when the season opened the association ought to be ready to put a perfect gun in the hands of the selected team. Colonel Litchfield, from same committee, reported that there were several private parties at work perfecting new rifles, one of which would prove an excellent weapon. He said the committee were not yet through with the gun-makers, and he thought that more than one company would yet come to the front. Colonel Bodine at once denied that he specially favored any particular gun, the committee desired a good one, and that his great anxiety was to place a rifle in the hands of the men at the earliest possible day, so that sufficient practice could be had. The matter of the purchase of the rifles was finally laid over until the next meeting of the board. Colonel Story, from the Range Committee, reported progress on the erection of buildings at the firing points, to enable the men to practice during the winter.

Some discussion was had on the manner in which the team of 1883 would be selected, Secretary Seabury denying the statement that the Board intended to select the team of 1883 without regard to competitions. Colonel Bodine stated that the old methods were, in this case, not available, as there would not be sufficient time for necessary competitions for places as last year. The team, however, would be selected from men who had made satisfactory scores. He suggested that commandants of organizations in the National Guard be authorized to detail members of their command to compete for places, that the records made in such competitions be attested and the men selected be provided with the necessary certificate from the Adjutant-Generals of their States, and then that competitions be held at Creedmoor in May next. General Molineux stated that the Board was anxiously awaiting a report from the committee, with all the necessary recommendations for the selection and government of the team, and trusted that such a report would be ready at an early day.

The last defeat of the American team, humiliating though it was, for the Americans always have been at the head of all that has been undertaken, has had the effect of stirring up those at the head of rifle matches, and, at the match in 1883, it is to be hoped that those who have the affairs in hand will put ammunition, guns, and men into the field who will be at least the equals of those that are made across the water. Judging from the manner in which the association is going to work there is every chance that the next contest will be nearer equal. Col. Bodine's idea of selecting those men of the different organizations of the National Guard who have made the best scores is a good one as all those who aspire for rifle shooting honors will have a chance to decorate their brows with the laurels. We have as good sharpshooters on this side of the Rockies as can be found anywhere and it is to be hoped that the Pacific coast will send representatives to the next great contest.

Rifle at Reno.

Last Sunday the Reno Guard held their shooting for the Regimental Medal. With the medal quite a number of company prizes were given. The following are the scores made:

A. B. Smith.....	4	4	5	5	4	5	3	5	4	5-44
C. H. Stoddard.....	4	4	4	4	4	3	4	4	4	5-40
G. Teasland.....	5	4	3	4	3	3	4	4	4	4-38
F. Teasland.....	4	3	4	3	4	4	4	4	4	4-37
C. Williams.....	4	4	3	3	4	4	5	4	3	4-37
P. Mathews.....	5	3	4	3	3	4	5	4	3	3-37
S. Meyers.....	3	3	4	4	5	2	4	3	4	4-36
L. Davis.....	3	3	3	4	2	4	3	5	3	3-35
L. Loomis.....	4	5	3	4	4	4	3	3	3	3-35
W. Henley.....	4	2	4	3	3	4	3	3	3	3-32
S. Francis.....	4	4	4	3	3	3	3	2	3	3-32
D. Churich.....	3	3	3	4	4	4	4	3	3	0-32
L. Leonard.....	3	4	3	3	3	2	4	3	3	2-30
G. W. Conkling.....	2	3	3	3	0	4	4	3	3	4-27
A. Moger.....	4	3	4	0	4	2	0	4	3	3-27
E. L. Bridges.....	3	3	3	2	3	5	4	3	4	0-27
F. Pavola.....	2	3	3	3	3	0	2	4	3	3-26
J. F. Alexander.....	5	3	3	4	0	4	4	3	0	0-26
A. C. Bragg.....	4	3	2	0	3	0	4	3	4	3-24
Asa Dawson.....	2	0	0	3	0	4	2	2	4	3-20

Total.....644

A Reno paper takes the occasion of the shooting to haul some of the poorer marksmen over the coals in a very unhandsome manner. Now, this is not the way to deal with unfortunate shots. Quite frequently a man may not be feeling well, which is sufficient excuse for a bad score. Our riflemen should be encouraged and not ridiculed, for it is not an unheard-of case where a poor beginner takes away the highest honors with a little practice. The next time that the Renos have a shooting the poor shots of the last will show better scores.

Company C of the First Regiment have their monthly company shooting to-morrow at Shell Mound Park. The companies of the First Regiment will not take any active steps in rifle matters until after their grand masquerade ball which comes off on the evening of December 8, after which several rifle matches will be put on the carpet.

A friendly rifle match comes off to-morrow at Shell Mound Park. F. Kuhnle and S. I. Kellogg will shoot against N. Williams and Col. Beaver; the conditions are 100 shots at 200 yards.

T. W. Harvey, Chicago, is about to issue a catalogue of his herd of Angus cattle, which includes a number of representatives of prize-winning herds of Scotland. Mr. Harvey's herd is near Syracuse, Neb.

English farmers are rejoicing because the movement of meats from America is decreasing. It is not said that other classes in England find cause for gladness in this falling off in the supplies of food.

Breeders of Shropshire sheep in England are forming a society for the publication of a flock-book and doing such other work as may be deemed for the good of the breeders.

YACHTING.

Cutter vs. Sloop.

As a general summing up of the results of the recent sloop and cutter races in New York we can do no better than to quote the following very fair article from the *Times*:

The yacht races sailed recently under the management of the Seawanhaka Corinthian Yacht Club showed plainly enough that the American type of yacht is not inferior for racing purposes to the cutter or English type. It is claimed by the cutter advocates that the cutter can sail closer to the wind than, or, to phrase it nautically, "out point," the shallow and broad beam American yacht, and can sail faster in rough water. The races of the week before last clearly disproved both claims. Two superior yachts of each type were matched in each of the two classes that sailed. In the first (larger) class were the sloop *Gracie*, so well known to New-Yorkers, and the cutter *Bedouin*, a new yacht built according to designs obtained from England, equipped after the best English manner, and manned by an English skipper and crew. These two yachts are very nearly of the same size, but the *Gracie* is slightly the larger, and has to give a corresponding allowance of time. In the second class were the cutter *Oriva*, which has proved herself to be an exceptionally fast boat, and the sloop *Fanita*, which is one of the best boats of like size to be found anywhere. The *Oriva* had the advantage over the *Fanita* of being vastly better equipped with sails. The first day's race was not a satisfactory test, for the *Gracie*, which had gained steadily on the *Bedouin* in running before the wind, and with a free sheet, broke her steering gear in rounding the Sandy Hook Light-ship just when the windward work was about to begin. That mishap left an easy victory for the *Bedouin*. The race in this class, however, established the fact that the *Bedouin* is an exceedingly fast sailer, and it may well be doubted if a better specimen of the cutter could be found to represent that type against our sloops. A boat that can sail from Fort Wadsworth by way of Buoy No. 10 to the Sandy Hook Light-ship, fully eighteen miles, in one hour and a half, in a moderate wind, is beyond question a very fast sailer. The *Bedouin* did this, but the *Gracie*, notwithstanding a considerable deviation from her course in going to the southward of Buoy No. 8½, which amounted to fully a minute's loss of time, sailed the same distance in one hour and twenty-eight minutes. The race in the second class was an equally unsatisfactory test. The *Fanita* was badly handled, and thereby thrown out of the race, but the *Oriva* was beaten by the *Valkyr*, a sloop built on the compromise of the two types. In the second and third days' races, however, over ocean courses, which, if one claim of the cutter advocates is valid, ought to be the most favorable to that type of boat, the *Gracie* outsailed the *Bedouin* worse beating against the wind than she did going before it. Almost invariably during both races, when the club's steamer was in position to afford an opportunity of judging, it was observable that the *Gracie* was pointing closer to the wind than the *Bedouin*. But this was not all; in these ocean races, whenever the boats ran before the wind and the greatest spread of canvas was the most important factor in the race, the *Oriva* gained visibly on the *Fanita*, but whenever they came to windward work and sails were shortened, the *Fanita* gained more than correspondingly on the *Oriva*. These facts effectually dispose of the theory that the cutter sails faster to the windward than the sloop. The other claim that the cutters make better headway than the sloops in rough water was shown to be equally unfounded. It was frequently observed that while the cutters were ducking their bowsprits at every plunge, and thereby losing their headway, the sloops were riding over the seas and going right ahead. But if the English cannot teach us how to build yachts, they unquestionably can show us how to make sails. The sails of the *Bedouin* and the *Oriva*, which were imported from England specially for those yachts, are simply superb, and as far superior to yacht sails obtainable here as to those of a Hudson River trading sloop. It is said that at one time American yacht sails excited the admiration of all Englishmen; now the tables are turned.

SEA GOING CATAMARAN.—People in the vicinity of the foot of Calvert street were considerably excited yesterday afternoon by the appearance of a strange craft, which made fast to an oyster dredger preparing for a cruise. The Captain and two hands stepped ashore, and were busy answering questions from a crowd of persons who had been attracted by the peculiar-looking visitor. The craft is known as a catamaran, and is called the *Jessie*. She is the property of Commodore Fred Hughes, of Yonkers, N. Y., and left that place under his command on Monday last for an extended tour through the Southern waters. The speed which has already been attained by the *Jessie* has exceeded 25 miles per hour, and the impossibility of its upsetting, and the fact that it can be used at sea as readily as in the smoother waters of the bay may tend to revolutionize the style of fast-sailing crafts to be hereafter used in our regattas. The *Jessie* is the first catamaran which has ever boasted a cabin attachment. It was projected by Mr. Thomas Farren, of Yonkers, and Commodore Hughes expresses himself as highly pleased with his experience in it. The *Jessie* will remain here until Monday next. Mr. Stewart Latrobe is well known to be interested in this species of vessels, and will probably investigate the visitor to-day.—*Baltimore American*.

JAY GOULD NOT TO BE LAUGHED AT.—A Washington dispatch says: Cramp, who is building Jay Gould's yacht, has been in consultation with the Naval Advisory Board, and says his contract with Gould is not to give him any definite number of knots, but to do the best that can be done with a vessel 217 feet long, with a fixed breadth of beam. He says that Jay Gould cannot bear to be tantalized, and that a New York dry goods dealer named Jarrett, who lives above Gould on the Hudson, has a yacht 112 feet long, which habitually passes Gould's yacht on the river. Jarrett, it seems, has a vicious way of coming down and firing a gun when he passes Gould's landing. Then, when he passes him on the river, he beckons to him in a mocking and dreadful way from the deck of his yacht. Gould has no idea of going around the world, but does intend to stop this impertinence.

It is not often that we hear of an ocean race in this quarter of the world but one has been arranged for that will, when the time approaches, attract great attention. That is a yacht race, of several thousand miles. Two yachts of this port will next season race down to the Sandwich Islands and back. The new yacht of the Spreckels brothers which has just been launched but not yet tried is one of the competitors. The other will be the yacht of Mr. Harry Tevis the keel of which has just been laid. The two yachts are nearly of equal size; in fact are just the same size on water line, 73 feet. The

Spreckels yacht is the widest; both draw 9 feet of water. The yachts will race down and remain at the islands a few weeks when they will start together for a beat back to San Francisco. This will be the greatest yachting event we have ever had here. The owners will go in their own yachts.

King Kalakaua's birthday, Nov. 16, was observed in Honolulu by yacht, boat, canoe, tug and swimming races; the programme embraced the whole day from 9 a. m. to 5 p. m. It was the most interesting day's sport of the kind ever enjoyed in the islands.

King Kalakaua has just had built at Honolulu a sloop-rigged yacht measuring thirty-one feet, six inches in length over all and about ten tons register. Her frame is of American oak and native woods and her planking of pine.

The Frolic has not been laid up yet and will probably now be kept in commission all winter.

The Chispa has not been laid up yet and it is not likely that she will be.

The light winds of late have made it bad for the few yachts in commission.

Farmer is at work on his new yacht and is putting on the deck.

Most of the yachts have been put in winter quarters.

The Clara is being kept in commission this winter.

Purvis has his new yacht ready for launching.

BICYCLING.

Tricyclists no doubt conjured up some very pleasant visions when they heard the other day that a successful experiment had been made with an electric tricycle. But a legal correspondent of the *Electrician* puts rather a damper on its prospects. "What is the use of an electric tricycle?" he asks. It appears that the new machine would fall under the rules of the Roads Act, which demands that every locomotive propelled by any other than animal power on a turnpike road or public highway must have three persons to conduct it. One of these three, according to the Act, must precede the locomotive on foot by not less than sixty yards, and must carry a red flag 'constantly displayed.' Riders and owners of horses he must warn, and perform other similar duties on behalf of the public safety. The speed, too, is regulated—in the streets of a town at two miles and on a highway at four miles an hour. Professor Ayrton will, however, probably find less difficulty in driving his electric tricycle through this Act of Parliament than O'Connell experienced with his coach-and-four.—*Pall Mall Gazette*.

A bicycle race for the five-mile championship of England took place recently upon the Crystal Palace track. The first heat of the third round brought together C. E. Liles and N. J. Saunders, winner of the recent fifteen-mile road championship. The riding was so good that previous records for three, four and five miles were beaten, the full time being 17:31 2-5. The final heat was run between Liles and H. W. Gaskell, resulting in a win for the former. He is a well-known bicyclist and promises well for the championship in this branch of the sport next season if he trains and runs for it seriously.

The *Æolus* club of Worcester, Mass., claims the long distance championship for a single day's club run, by reason of two men starting and one man completing 179 miles within twenty-four hours. The distance was all made between the towns in the immediate vicinity of Boston, most of the road being ridden over two or three times, so that the rider might avail himself of the notably smooth roads of that neighborhood. While the ride was very creditable, it is not so much so as an equal distance between two places, the full distance, or half the distance and return, would have been.

Eight members of the Oakland Bicycle Club enjoyed a pleasant trip to San Leandro one day last week. After lunch a short stroll up the road toward Lake Chabata and return, and a leisurely ride home in the afternoon, not forgetting a call at Dieves', made one of the pleasantest short trips of the season.

The best long distance record yet made in this country is believed to have been accomplished by Mr. H. C. Eggars of the San Francisco Bicycling Club, who rode upon an eight-lap track in this city over two hundred miles in one day, and five hundred and forty three miles in three days.

Roup.

The following remarks about this troublesome disease are taken from Diehl's *Poultry Doctor*:

Cause.—This is considered one of the most dreaded and contagious diseases of poultry. It is caused principally by a neglect or want of attention to minor diseases of the air passages produced by colds; if the breeder will attend to the above in time he will not only save himself a great amount of unpleasant doctoring, but the lives of many birds.

Symptoms are the same as in almost all other diseases produced by exposure to cold, wet and damp atmosphere, only it is of a more aggravated form; the discharge from the nose and eye becomes thick, opaque and very offensive, the nostrils become filled up and closed by the discharge, the eyelids become swollen and stuck together, and often the eyeball is quite concealed, and in severe cases the whole face is considerably swelled by the diseased secretion, and the poor bird, being unable to feed itself, rapidly sinks away. The disease is highly contagious, it being communicated by the affluvia arising from the discharge as well as by the contamination of the drinking water by the sick bird's beak while drinking. Diseased birds as soon as noticed should be immediately removed from their well companions.

Remedy.—The first thing towards a cure is to place the diseased bird in warm, dry quarters, give soft food, bathe the head with Castile soap and warm water, until the nostrils are opened and the eyes relieved. The disease soon runs its course. In about a week the bird will be either almost well, or so nearly dead that it had better be killed and deposited two feet under ground to prevent contagion.

The first number of the *BREEDER AND SPORTSMAN*, published in San Francisco, reached our sanctum a few days ago. It is a very handsome journal, devoted to field sports in general. The illustration of Electioneer on the title page is an artistic effort far above those seen ordinarily in sporting papers. Joseph Cairn Simpson is the editor, and judging from his leading articles, he is the right man in the right place. We will always welcome the *BREEDER AND SPORTSMAN* with pleasure, and read the accounts of that wonderful country where it is published.—*Southern Industries, Nashville, Tenn.*

(CONCLUDED FROM PAGE 253)

The Golden Citys made a game struggle in their heavy lap-streak, until they come in collision with the Chispa buoy and broke two outriggers. This unfortunate accident in the first quarter mile of the race left the struggle between the Ariels and Pioneers. The contest was of short duration. The Ariels rowed in fine form, drew away from their opponents until at the three-quarters of a mile they were leading them by three lengths. At the mile the race was over, barring accident, for the Pioneers were four lengths behind and plowing along with a jerky stroke that showed how the pace was telling on them. Approaching the stake-boats at the mile and a half, the Ariels steered badly and by going in shore lost several lengths but regained their advantage by an excellent turn. The Pioneers turned in a flurry and by pulling too soon made a wide detour that carried them into the tide and threw them further behind. They worked hard coming home but fell off at every stage of the journey and finished exactly a minute behind, the time for the winners being 20:17.

As the course had not been properly measured it is impossible to decide whether the time is fast or slow. The chances are favorable to its being slow, as the winners were not pushed and could have done much better and the Pioneers rowed so poorly that the fact of their being beaten does not make the performance remarkable. The Pioneers in their race showed all the bad effects of insufficient training. In practice pulls such faults do not appear but when the tension of a stern race begins to tell on them, the bad form that results from lack of training becomes conspicuous. With the exception of Robert Crowley there was no man in the Pioneer boat who was really in fair condition for a race. John Sullivan, the stroke, looked dead out of fix; R. C. Lyne did not present the appearance of a man fit and well and Long, the bowman, had stepped back into a boat after years of absence and trained in a dozen easy rows. The performance of the Ariels on the contrary showed the benefits of careful and earnest preparation. Every man in the boat was fit to row the course out. Corcoran set them a telling stroke and as long as necessary they kept it. Their performance is deserving of much praise, as they commenced training under discouraging circumstances and with the poorest chance of success. As the cup offered by the *BREEDER AND SPORTSMAN* carried with it the championship of the Pacific coast the Ariel crew now hold that title and the four who will attempt to wrest it from them will have to row a much faster race than that of yesterday if the victors only continue together and follow the intelligent, determined course which they observed in preparing for their first contest.

BASE BALL.

Olympics vs. Redingtons.

The match at the Olympic Athletic Club's grounds at Oakland on Thursday resulted in the following score:

REDINGTONS.										OLYMPICS.									
T.B.R.	B.	P.O.	A.	E.	T.B.R.	B.	P.O.	A.	E.	T.B.R.	B.	P.O.	A.	E.	T.B.R.	B.	P.O.	A.	E.

Passed balls—Fitzgerald 3, Moran 2. Wild pitches—Redman 2, Conn 2. Scorer for the Redingtons, Waller Wallace; for the Olympics, W. Schofield. Umpire—Eugene Van Court of the Howards.

Great Mount St. Bernard Dog Show.

Says the *Sporting Life*: The St. Bernard Club's first grand show of St. Bernard dogs (under club rules), extending over three days, commenced on the 1st inst., the show taking place at the Duke of Wellington's Riding School, Knightsbridge. To collect under one roof no less than 252 specimens of the Mount St. Bernard breed must have proved a task of no ordinary difficulty, which few but the promoters of this most interesting exhibition could have surmounted. Unfortunately the space at our command will hardly allow us to do full justice to the show, or go into comparative merits of all the noble animals on view, whose sagacity so closely approaches reason—the most devoted friends of man, and that, too, in the hour of his greatest need. When a man saves a single life at the risk of his own the deed invariably commands admiration—sometimes honor and reward—but many of the ancestors of the docile monsters of the Alps exhibited have rescued dozens of human beings from beneath a thick carpet of snow, which, but for the poor dog's untiring exertions, would have been an everlasting funeral pall. One magnificent fellow is credited with saving twenty-two lives, ending his glorious career in a vain attempt to rescue another snowed-up traveler, and probably many of the exhibits would at a moment's notice willingly undertake a similar humane and disinterested errand. In a show of this magnitude it would be idle to expect to meet with every specimen absolutely pure, or taking the eye as representative animals. At the same time, the majority in all classes are worth a long journey to witness, the prize-takers possessing all the grand points which have assisted to make the breed famous. With twenty classes, embracing 252 specimens, the task of judging was far from light, and extended into a very late hour, but was successfully accomplished by Rev. J. Cumming Macdonald, whose decisions gave general satisfaction. The prices ranged from ten guineas to ten thousand—the latter, of course, prohibitive—but some at intermediate prices changed owners.

FISH.

Waterproofing Fish Lines.

In the winter of 1875-6, I was much interested in this subject of preparing fish-lines, and thought it would be a pleasant thing to do on stormy days, and that there would be such a satisfaction in showing nicely dressed lines to my friends, proudly saying: "I did it." Well, I treated several hundred pards of braided silk and linen, but I have never exhibited the result to any one but brother Hallock, and he will testify that I was not the least proud of my work.

I satisfied myself that boiled linseed oil was the proper agent to use, because it was recommended by those in authority on the tackle question. I bought one dozen braided lines, the greater part of them one hundred yards in length, but a few, fortunately, as it proved, only fifty yards. The material was silk in some, in others linen, but both were to be treated alike.

I went into a drug store to buy the boiled oil, and while talking to the druggist about what I proposed to do, a doctor who was present volunteered the information that I should use raw linseed oil. I listened to him as he talked very scientifically of the properties of the oils, raw and boiled, and their effect upon silk and linen, and was converted to his belief, wondering that I ever thought of using boiled oil, and why English and American anglers had made the mistake of recommending the wrong oil.

I bought the raw and put my lines into it in a body, and thereafter, for weeks, the attic looked as though there was a huge net stretched in it. I rubbed and dipped and rubbed again, and at last took the lines down finished, as I thought. I was mistaken, but there was oil enough in them to finish them, and it did, effectually.

I was so much in love with my work at the time, I thought I would prepare one more line for trolling, making it a perfect color for such fishing. I bought one hundred yards of braided silk, put it into my oil tank and then into a box of mahogany dust, afterward.

Having a fair stock of lines dressed in the orthodox manner, I could afford to experiment a little. So buying another silk line, I treated it to a coat of paraffine. I think the subsequent rubbing took all the paraffine off, and out of the line, but I am not sure.

I then tried another line in pure rubber dissolved in chloroform. I passed the line through the solution I was to coat it with, and the evaporation of the chloroform was to leave a thin coating of pure rubber on the line. This was perfect in theory, and in theory only. There may have been a touch of rubber here and there on the line when I finished, but it was very slight and very irregular. The chloroform did its duty nobly, too much so, as it evaporated before the time put down on the programme.

My next attempt was with a linen line, thoroughly soaked in a solution of sugar of lead and alum, equal parts, powdered and dissolved in rain water.

When the fishing season opened I found all my nicely oiled lines were ruined and worthless, every one, silk and linen. The two lines treated with rubber and paraffine I used, but dried them as though they had never cost me anything for waterproofing. The linen line which I had soaked in sugar of lead, alum and rain water, was absent from roll call before I satisfied myself as to its waterproof qualities, and has never been "accounted for."

After contemplating the wreck of oiled lines I did what I should have done at first, found some one who had made a success of waterproofing his own lines; and I am indebted to Mr. Walter M. Brackett, the Boston artist, and successful salmon angler, for raising me out of the quicksand of errors in which I found myself on the waterproofing question. I quote from one of his letters:

"Years ago I exhausted the subject of waterproofing fish lines by a series of experiments, and the result is that any lines composed of vegetable fibre are rendered useless by being treated with linseed oil. They may do for one season, but beyond that they are so weak as to be worthless. I have never found any ingredient that would meet all the requirements necessary, viz: to make them waterproof and flexible, and still retain their strength. There is, however, no difficulty in preparing silk lines. It should be done with properly boiled linseed oil, and not raw. The latter has more or less gluten in it, which has a tendency to render the lines stiff. I know of but one man, a scientific varnish maker, who understands preparing the oil, but any scientific varnish maker should boil you oil for the purpose, if you

tell him what is required. I inclose you four samples of lines prepared with boiled oil. Nos. 1 and 2 have been used eight years and were always allowed to dry on the reel. In fact no care was ever taken to prevent their rotting. Nos. 3 and 4 have been used three years, but were not prepared as successfully as Nos. 1 and 2. I always leave my lines two weeks before re-coating, which I do three times, always rubbing down with a piece of black silk."

I never saw finer samples of waterproofed lines, and I enclose them for your inspection, and that of others interested in the subject. As a general thing it is better to buy one's lines already dressed at the shops, as the tackle makers have all the appliances for doing the work thoroughly and well, but some anglers like to dress their own lines during the close season when they cannot fish. It is not fishing, but it is preparing for it, and there is a heap of pleasure in preparing.—*Cor. Angler.*

Fishing for Rats.

A novel mode of catching rats is thus described in the *American Angler*. The writer says that a person having the patience of most fishermen can have much sport in hooking the vermin:

The warehouse adjoining his place of business is infested by these "fletails," and our friend may be seen in the early spring and late fall, on an occasional evening, just after dark, seated at the back window of his counting-room (overlooking the yard of the warehouse) with an ordinary rod in hand, strong linen line, and a spring hook, commonly called a "soekdolager," baited with a lump of fresh beef, patiently waiting for a bite. It does not tarry long, nor does it consume itself in nibbles, but with a hungry snap the bait is seized and the hooks of the soekdolager impale the rat, when the excitement commences.

A lusty rat is no mean antagonist at the end of a pliant pole and ten feet of line, and his plunges, twistings and straight-away dashes are more perplexing to the angler than the leaps, surges and sulkings of the gamy trout or bass. The rat is generally landed, after a seasonable sport, and killed by a blow from a bludgeon.

In this connection we may state that thousands of small hooks are bought by sugar refiners for ratting purposes. The hooks are baited with small pieces of beef on each, and then distributed about the building. The rats swallow beef and hook—the first is digested, the latter is not—death of course results. The remedy is said to be infallible.

Those who are troubled with those pestilential rodents will have little sympathy for them under any circumstance that will lead to their capture. Still there is a taint of barbarism in catching them in the manner described. The water hides the struggle of the fish impaled on the hook, and the disciple of the "gentle art" is spared the exhibition of suffering which is shown in the air. It is not so bad as a steel trap, however, and still better than to depend on the hook, when swallowed, and a lingering death. Rats, gophers and the ground squirrel of California do an immense amount of damage, and any plan which will lead to their extermination will be gladly followed.

The *Reno Gazette* is responsible for the following fish story: A Chinaman fishing in the Truckee yesterday caught a thing that astonishes all who see it. It has wings, fins and legs, and flies, swims or walks with equal facility. It is entirely unlike anything ever seen before, and is really a wonderful curiosity. The wings are like those of a flying-fish; otherwise it resembles a lizard, except that the head is more pointed. It is about ten inches long, and will weigh two pounds or so.

CALIFORNIA HOPS.—While the hop crop is short almost everywhere this year, it is good in California, and our own hop-growers are among the fortunate. But this is not the most important feature or circumstance growing out of the shortage of the hop crop. California hops will now go all over the world, and consumers everywhere will have a first-rate opportunity to test them and learn their superior merits. The California hops are really superior to the best German hops, and, in fact, to hops grown in any other part of the world, and the present condition of the hop markets will give California an opportunity to secure this verdict, and will secure it wherever they are used. Already English buyers are among us with their orders for thousands of bales, and already they are confessing that our hops are superior to all others. These experts have not only given in their verdict to this effect, but they agree, also, that Sacramento hops have the advantage in some important respects over hops raised in any other locality in the State.—*Mendocino Dispatch.*

There is a craze at present in regard to hop culture, the high prices stimulating the efforts to increase the production.

The superiority of California grown hops is established, and there cannot be a question that the demand will always make the growing of them remunerative.

The Whirligig of Time.

An old friend at Arcata sends the *Telephone* a clipping from *Porter's* (New York) *Spirit of the Times* which was published more than thirty years ago. It consists of a "Letter from the Pacific" and is dated "Steamship California, Pacific ocean, May 20, 1849." The value of the little slip of paper is enhanced by the age which it has attained, but to us it is for the time being more valuable for the remarkably wild statements which it contains. A sample extract will be evidence on that point:

"There are no good horses or stock of any kind in California, and though writers in your own, as well as in other journals, have praised its soil, I tell you that California, under any circumstances, can never be an agricultural country. We now have on board some of the boys returning home, satisfied that California is a humbug in all save its gold mines."

We almost hope that the author of that letter still lives, and that the following facts in refutation of the opinions above expressed may meet his eye. It might be a wonder to him to read that the lowest estimates made of the wheat yield in California for the year 1882 place it at 500,000 tons; that the total acreage of vineyards for the year is given at 100,000, and that last year's vintage produced 9,000,000 gallons. It might be a satisfaction to him to learn that at the end of thirty-three years California as a fruit-growing State is in the lead of any other—that she furnishes the markets of the Union, even to the Eastern seaboard, with the first fresh fruits of the year. He might be pleased to learn that the same statement will apply to California as a beef-producing State, and that her ranges are at this time being drained to supply the markets of States and Territories east of the Rocky Mountains. And to close this chapter it is only necessary to remind him that the census statistics show that in 1880 the State produced 304,795,000 feet of lumber, 242,400,000 laths, 135,718,000 shingles, 2,063,000 staves and 1,203,000 sets of barrel headings.—*Eureka Telephone.*

A company has been formed to publish in San Francisco a first-class journal devoted to sport and breeding, and Mr. Joseph Cairn Simpson has been selected to edit it. The issue will be weekly, and the paper will be called the *BREEDER AND SPORTSMAN*. Particular attention will be paid to the breeding, raising and education of horses. Mr. Simpson, as a writer, a student and a handler of horses, has been before the public for more than a quarter of a century, and he is well qualified to take control of the journal. His "Horse Portraiture," first published in the *Turf, Field and Farm*, is a standard work, and the only regret is that the author has not seen fit to prepare a second volume for the press. The *BREEDER AND SPORTSMAN* will be a sixteen-page paper, and the first number will be published July 1st. The subscription price is five dollars per annum, and Mr. Simpson's address is 508 Montgomery street, San Francisco.—*Turf, Field and Farm.*

Market Report.

FLOUR—We quote: Best City Extra, \$5 37½ to \$5 50; Superfine, \$4 50 to \$4 75; Inferior Extra, \$4 75 to \$5 25; Inferior Superfine, \$3 65 to \$4 10 bbl. WHEAT—The market is fairly active and prices steady; \$1 71½ to \$1 71½ is considered as a fair quotation for No. 1 standard, White. Recent sales choice milling lots of No. 1 White were made at \$1 74 to \$1 74½. BARLEY—Market of rather a weak tone. We quote recent sales of No. 1 Feed December, \$1 42½ to \$1 42½; do, January, \$1 42½ to \$1 42½; do, February \$1 43½; No. 2 December, \$1 36 to \$1 36; do, No. 1 Brewing \$1 50 to \$1 50 ctt. OATS—Market steady. Fair Feed, \$1 70 to \$1 75; Good, \$1 75 to \$1 80; Choice, \$1 85 to \$1 90 to \$1 ctt. MILLING \$1 95 to \$2 ctt. RYE—Quotable at \$2 12½ to \$2 25 for No. 1, and \$1 75 to \$1 90 per ctt for No. 2 grade. FEED—Ground Barley, \$22 to \$23 per ton; Cracked Corn, \$28 per ton. Shorts, \$20 per ton. Oileake meal the oilworks sell to the trade at \$32 50 per ton, less the usual discount. Middlings, \$27 to \$28 per ton for lots at the mill. LAY—Alfalfa, \$11 to \$13; Wheat \$16 to \$17; Wild Oat, \$15 to \$17; Mixed \$12 to \$14 per ton. PROVISIONS—Eastern Hams, 12½ to 21c; California Hams, 16½ to 16½c for plain, 16½ to 17c for sugar-cured canvased; Eastern Breakfast Bacon, 17½ to 18c; California Smoked Bacon 16½ to 16½c for heavy and medium, and 16½ to 16½c for light and extra light; Clear Sides, 16 to 16½c; Pork, \$21 50 to \$22 for Extra Prime, \$24 to \$25 for Prime Mess, \$25 to \$25 50 for Mess, \$27 for clear and \$28 to \$28 50 for extra Clear; Pigs' Feet, \$16 to \$18 per bbl; Mess Beef, \$16, for bbls and \$9 50 for hf bbls; Extra Mess Beef, \$17 for bbls and \$8 for half

bbls; Family Beef, \$18 to \$18 50 per bbl; California Smoked Beef, 14 to 14½c per lb.

FRUIT—We quote: Apples, 30 to 50c for common and 75 to \$1 per box for good; Pears, 50 to \$1 25 per box; Grapes, 75 to \$1 per box; Lemons, \$6 to \$7 per box for Sicily and \$5 50 to \$6 for Malaga; Limes, \$3 50 to \$6 per box for Mexican; Bananas, \$2 to \$3 50 per bunch; Mexican Oranges \$17 to \$20 per thousand; California \$2 25 to \$2 75 per box; New crop Western Cranberries are offering at \$15 to \$17 per bbl.

VEGETABLES—We quote: Marrowfat Squash, \$8 to \$10 per ton; Carrots, 30 to 35c; Turnips, 75 to \$1; Cauliflower, 75 to \$1 per dozen; Cabbage, 50 to 75c per ctt; Garlic, 4c per lb; Green Peas, 7 to 8c per lb; Green Peppers, 50 to \$1 per box; Tomatoes, 75c per box; Celery, 60c per box; String Beans, 10c; Lima Beans, 5c per lb; Green Corn, 75 to \$1 per box; Okra, 75 to \$1; Egg Plant, 75 to \$1 per box; Dried Okra, 18 to 20c; Dry Peppers, 15 to 18c per lb.

POTATOES—River Red, 50 to 55c; Early Rose, 75c to \$1; Garnet Chile, \$1 to \$1 10; Humboldt, 90c to \$1; Tomatoes and Petaluma, 87½ to \$1; Peerless \$1 to \$1 10.

ONIONS—Quotable at 60 to 70c for good and 25 to 40 per sack for poor.

BEANS—Bayos \$3 75 to \$4; Butter, \$3 to \$3 10 for small and \$3 20 to \$3 30 for large; Lima, \$3 75 to \$4; Pea, \$3 to \$3 25; Pink, \$2 75 to \$3; Red, \$2 75 to \$3; small White, \$3 to \$3 25; large White, \$2 75 to \$3 per ctt.

BUTTER—We quote jobbing lots: Fancy, 35c; choice, 32 to 34c; fair to good, 27½ to 30c; inferior lots from country stores, 22 to 25c; Arkin, 27 to 28c for good to choice, and 25 to 26c for ordinary; pickled roll, 20 to 22c; Eastern, 18 to 22c per lb.

CHEESE—Prices steady. California, 13 to 14c for choice; 10 to 12½ for fair to good; do, factory, in boxes, \$15 to 16c; Eastern, 16 to 17c; Western, 8 to 12c per lb.

EGGS—California choice, 50c; Eastern, 35½ to 42½c per doz.

POULTRY—Live Turkeys, gobblers, 15 to 16c; do hens, 15 to 16c; do dressed, 16 to 21c; Roosters, \$5 50 to \$5 50 for old and \$5 50 to \$6 for young; Hens \$5 50 to \$6 50; Broilers, \$4 to \$5, according to size; Ducks \$6 50 to \$8 per dozen; Geese, 1 50 to \$1 75 per pair.

GAME—In good demand. Quail, \$1 to \$1 12½ per dozen; Mallard Ducks, \$3 50 to \$4; Sprigs, \$2 25 to \$2 50; Canvasback, \$3 50 to \$4; Brandt, \$1 50 to \$2; Gray Geese \$2 to \$2 50; White Geese, \$1 25 to \$1 50; Honkers, \$5 to \$6; Snipe, \$1 25 to \$1 50 for English and 60 to 75c for common; Teal, \$1 25 to \$1 35; Widgeon, \$1 25 to \$1 35; Hare, \$1 75 to \$2 25; Rabbits, \$1 25 to \$1 75.

WOOL—Light trade. No change in the prices. We quote: Choice Fall, 15 to 17c; Fair do, 13 to 14c; Defective Fall, 9 to 11c; Spring (free), 20 to 24c; Spring (defective), 15 to 18c per lb.

HIDES AND SKINS—Dry hides, usual selection, 19 to 21c per lb; culls one third less, and Mexican Hides 1c per lb less. Dry Kip, 18 to 20c; Dry Calf, 21 to 22c; Salted Steers, over 55 lbs, 11c per lb; Steers and Cows, medium, 10c; light do, 9c; Salted Kip, 15 to 30 lbs, 11c; Salted Calf, 14 to 15c per lb; Dairy Calf 70 to 80c each; Sheep Skins, 25 to 30c for Shearlings; 30 to 50c for short, 60 to \$1 for medium, and \$1 to \$1 50 apiece for long wool and wool skins. Butcherer's Green Skins bring higher prices.

TALLOW—Quotable at 9 to 9½c per lb for rendered and 11½ to 12c for refined, both in shipping order.

MEATS—Following are rates for whole carcasses from slaughterers to dealers:

BEEF—Prime, 8½ to 9c; medium grade, 7½ to 8c; inferior, 6 to 7c per lb.

VEAL—Large Calves, 7½ to 8½c; small ones, 9 to 10c per lb.

MUTTON—Wethers are quotable at 4 to 4½c and Ewes at 3½ to 4c per lb, according to quality.

LAMB—Quotable at 6 to 6½c per lb.

PORK—Live Hogs, 7½ to 7½c for hard and 6½ to 6½c for soft; dressed do 10 to 10½c per lb for hard grain bogs.

JOS. BANIGAN, General Agent.

BOYS, HERE IS A CHANCE!

The **SOLAR WATCH**, a perfect Timekeeper, and a trial subscription to the **GOLDEN ARGO**, a Weekly Paper for Boys and Girls, **FOR ONLY 25 CENTS.**

The Solar Watch is the latest wonder. It will denote the time accurately AND CAN NEVER GET OUT OF ORDER. It consists of a compass (worth alone more than 50 cents), a dial and indicator. The instrument being pointed due north, the exact time is infallibly given. For Boys it is just as good as a \$15 watch; for Travelers it is in some respects better, as it always gives the exact time of the place they are in; for Sportsmen it is invaluable and indispensable; for School Teachers it is a valuable addition to their scientific instruments. The Solar Watch can be carried in the vest pocket, is instantly adjusted, and will denote the exact time. Boys, just think of it. A Watch for 25 CENTS. Every statement guaranteed or money refunded. This is no humbug, and the Solar Watch will do just what we say. It is not a TOY; it is a WONDERFUL INSTRUMENT, MADE ON SCIENTIFIC PRINCIPLES, ACCURATE and RELIABLE. The Compass is absolutely correct, and is enclosed in a beautiful nickel case. It must not be confused with the so-called magnetic time-pieces, which have been exclusively advertised. The Solar Watch has never been advertised for less than 50 cents, but in order to introduce our elegantly illustrated youth's paper, "The Golden Argo," we will send you this same a trial month and the Solar Watch FREE, if you will send us 25 cents to pay postage and packing expenses. Postage stamps taken. Address **E. G. RIDEOUT & CO., 10 Barclay St., New York.**

IMPROVED HORSE CLOTHING.

Secured by Letters Patent ISSUED MAY 27, 1879.
REISSUED MAR. 29, 1881.

The above cut represents the body-piece, the patent also covering the improvements in the hood. The following are the claims granted:

1. An improved blanket or covering, consisting of the body-piece A, flap C, and the extension B, formed or united together, so as to cover the body and legs of the animal, substantially as herein described.
2. The blanket or covering A, having the flap C, and the extensions B, to fit the fore and hind legs of the animal, front fastenings F G, and the permanent straps or bands E, substantially as and for the purpose herein described.
3. The blanket or covering A, with its extensions B, permanent securing-bands E, and the front fastenings F G, in combination with the elastic neck-extension H, substantially as and for the purpose herein described.
4. The blanket A and hood J, in combination with the elastic connecting-strip I, substantially as described, and for the purpose set forth.
5. The close-fitting hood J, having the elastic band L beneath the jaws, so that they may be allowed to move without disturbing the fit, and adapted to be secured to the cover by means of straps, substantially as herein described.
6. The improvement in covering-blankets for animals, consisting of the blanket A, having the flap C, and permanent straps or bands fixed to it to secure it around the body, whereby the use of loose surcingle is avoided, substantially as herein described.

The right to make clothing in the United States will be sold on a royalty. Apply to the patentee,

S. P. Atlantic Express Train via Los Angeles, Yuma, etc., leaves San Francisco daily via Oakland ferry, foot of Market street, at 9:30 A. M.

TO Sportsmen & Pleasure-Seekers.

THE SOUTHERN PACIFIC R. R. CO.

RESPECTFULLY CALLS ATTENTION TO THE

SUPERIOR FACILITIES

AFFORDED BY THEIR LINE FOR REACHING with speed and comfort the best places in the State for

Sea Bathing, Shooting and Fishing.

TRAINS LEAVE SAN FRANCISCO DAILY FOR

MONTREY,

THE MOST CHARMING

Summer and Winter Resort of the Pacific Coast.

with its beautiful Groves and delightful Drives. Tront in abundance can be obtained from the several streams in the vicinity of Monterey, and the best shooting may be had in season.

THE BAY OF MONTEREY

Is noted for the extent and variety of fish which abound in its waters, notably Salmon, Rock Cod, Baracuda, Pompano, Spanish Mackerel, and Flounder. The above-mentioned attractions, in connection with the low rates of fare, rapid transit, and the superior accommodations furnished at the "HOTEL DEL MONTE," have made Monterey a paradise for sportsmen.

THE BATHING ESTABLISHMENT OF THE

"HOTEL DEL MONTE,"

IS UNSURPASSED.

A SPACIOUS SWIMMING TANK

(150 x 50 feet)

FOR WARM SALT WATER, PLUNGE AND SWIMMING BATHS.

ELEGANT ROOMS

For Individual Baths with DOUCHE and SHOWER facilities.

MAGNIFICENT BEACH

Of pure white sand for SURF BATHING, Etc., Etc.

THE FAVORITE ROUTE to those well-known Watering Places,

APTOS, SOQUEL AND SANTA CRUZ.

IS VIA THE

Southern Pacific Railroad,

(Broad Gauge), and the

SANTA CRUZ RAILROAD.

At PAJARO, the SANTA CRUZ R. R. connects daily with Trains of the S. P. R. R. The S. P. R. R. runs through the counties of San Mateo, Santa Clara, San Benito, Santa Cruz and Monterey, in each of which game abounds in great variety. Notably

Quail, Pigeon, Snipe, Duck, Geese, Deer and Bear.

Lakes PILARCITOS and SAN ANDREAS are reached by this line. Stages connect with trains daily at San Mateo for those well-known retreats, PUEBLO, SIMA, SAN GREGORIO and PESCADERO. We would particularly call attention to the unlimited extent of range at and about SAN BRUNO and MCMAHON'S for RIFLE PRACTICE.

These resorts are but a short distance from San Francisco and offer special inducements to the lovers of this manly sport.

SPECIAL NOTICE.

Sportsmen and others presenting Passage Tickets of any description issued by this Company will be entitled to

FREE TRANSPORTATION OF THEIR DOGS

when carried in Baggage Cars and put in charge of Train Baggage-men. Train Baggage-men are instructed to issue CHECKS for all dogs received in Baggage Cars.

In order to guard against accidents to Dogs while in transit, it is necessary that they be provided with COLLAR AND CHAIN, Guns and Fishing Tackle checked and carried free of charge. Guns taken apart and securely packed in wood or leather cases may be taken in Passenger Cars.

OF THIS

Advertisement

A

Splendid

Timekeeper.

In order to advertise HOUSE AND HOME, and secure subscribers promptly, we have decided to make the following most princely and magnificent offer to each and every reader of this paper. It is the custom practice of the gold and silver watchmakers of England and Switzerland to purchase from the pawnbrokers of their respective countries all the gold and silver watches which have been carelessly sold, simply for the sake of the gold and silver cases. The work is then sold to a celebrated watch firm who have made a specialty of this business. This firm places the works in the hands of skillful workmen, who set to work and put them in as good condition as possible. These works embrace every variety of movement, some of them being very fine and perfect timekeepers all handsomely cased. We have just purchased the entire stock (2,000) of a bankrupt concern of the above described watches at less than the first cost of the raw material.

On receipt of \$1.50, the subscription price of HOUSE AND HOME, we will send HOUSE AND HOME for one year (2 numbers); and one of these watches, postpaid, to any address in the United States. Watches mailed the day the order is received. The watches were purchased specially to go with HOUSE AND HOME, and will be furnished only to the subscribers to that publication. In order to introduce it at once we make this unusual offer, which could not be made were it not for the fact that we bought the watches at one quarter cost of manufacture.

On receipt of 50 cents extra we will send our new and elegant watch-chain with a whistle charm and dog call attachment—just the thing for hunters and sporting men.

SATISFACTION GUARANTEED.

Remember, any one sending us money for HOUSE AND HOME on the above offer, who can not see it that they are not satisfied with their bargain, can have their money cheerfully refunded.

Address: METROPOLITAN PUBLISHING CO.,
252 Broadway, New York City.

WHAT THEY SAY OF US.

West Point, N. Y., Oct. 17, 1882. Metropolitan Publishing Company. Gent: I am in receipt of the handsome premium watch sent me. I was much surprised to know that you could supply so good a timekeeper for so little money. HOUSE AND HOME alone is worth the price. Enclosed please find six (6) new subscriptions at \$2.50. Please send me 6 premium watches the same as the last. Very truly yours, Edw. S. Farrow, U. S. Army. Marquette, Mich., Sept. 20, 1882. Gent: Watch arrived all right in timekeeping quality. Jesse W. Sparks, Jr. St. Paul, Minn., Sept. 11. Premium received, and a nice one this. Gen. R. W. Johnson, Wrightstown, Minn., Sept. 20, 1882. Received premium last night. Well satisfied. Martha Goodale. Testimonials like the above received every day.

N. B.—The popular and beautiful weekly publication known as HOUSE AND HOME illustrated newspaper, is one of the best and most elegantly illustrated weekly newspapers of the day, full of News, Art, Science, Fashion, Music, Poetry, Charming Stories, Wit and Humor, Useful Knowledge, and amusement for every American home. In fact a pictorial history of the world from week to week—eight beautiful illustrated pages—no size as Harper's or Leslie's illustrated weeklies.

GENUINE PILLS & POWDERS.
GENUINE PILLS & POWDERS.**

Fresh from the British College of Health, London.

THE GREATEST CURE OF THE AGE, AND the only certain vital restorative. Never fails, no matter what the complaint, nor how long its duration, if properly persevered in. No need of being sick or ailing with these wonderful and new-life-giving remedies in your possession. This medicine is not a patent humbug, but old, tried, reliable and world-wide in its reputation, and thousands of people on the Pacific Coast can testify to its great healing power and curative qualities.

Sold only by the duly-authorized agent,
MRS. A. E. HENLEY.

Room 13, Russ House, 1009 J street, Sacramento, Cal.
Send for circulars.

CONSUMPTION.

I have a positive remedy for the above disease; by its use thousands of cases of the worst kind and of long standing have been cured. Indeed, no strong is my faith in its efficacy, that I will send TWO BOTTLES FREE, together with a VALUABLE TREATISE on this disease, to any sufferer. Give Express & P. D. address, DR. T. A. SLOCUM, 181 Pearl St., N. Y.

BREEDER AND SPORTSMAN

Vol. I. No. 24.
NO 508 MONTGOMERY STREET.

SAN FRANCISCO, SATURDAY, DECEMBER 9, 1882.

SUBSCRIPTION
FIVE DOLLARS A YEAR.

BUCCANEER. Owned by G. Valensin, Arno Farm, Sacramento Co., Cal.

The two great trotting strains of the world have distinct origins. Mambrino, the thoroughbred son of imported Messenger, is the patriarch in one of them; Young Bashaw, the son of the imported Barb Grand Bashaw, the other. We give the pride of place to the sons, as, in the case of Mambrino, Hambletonians and Mambrino Chiefs originate from him, and the son of the Barb has the merit of being the head of the Bashaws, Clays, and other branches of the family which trace their lineage to this source. There are other branches of the Messengers that have gained distinction, though these are so completely overshadowed by the get of Mambrino that

a comparison can scarcely be made. While any candid man, who has the requisite knowledge, will readily concede that a majority of the great trotters have sprung from Mambrino, no one can deny that the others have occupied so prominent a position as to warrant placing them in the second position, and that position only slightly inferior. We have always claimed that there were good ones in all the prominent families, and that it would scarcely be fair to award the highest rank to one sept. The combinations of blood have resulted in the greatest successes, and the union of various lines give evidence of their importance to the breeder. St. Julien

brings the two together, and so does George Wilkes and Electioneer and others of high repute. But it is needless to go into a long argument as even those who are wedded to one family will acknowledge the merits, even though on rare occasions some one will be found who is prone to underrate those he has an antipathy to, that antipathy arising from an extreme jealousy that considers praise of another derogatory to those he fancies.

The illustration in this number is a capital specimen of the family to which he belongs. Size, color, gait, form, are characteristics, for though Grand Bashaw, and his son Young

THE STABLE.

A Natural Foot.

Bashaw, were grey, black or dark brown has been the shade of a majority. As is well known, the grey is apt to change into black in the progeny, and then may come bays and chestnuts and other shades, marking after some ancestor or other far back in the genealogical tree. Grand Bashaw was imported from Tripoli by Commodore Morgan. He was called an Arabian though the weight of testimony is in favor of the Barb origin, and he was claimed at the time of importation to be the equal of any horse in the country in "point of beauty, action and speed." Bred to Pearl by First Consul, her dam Fancy by imported Messenger, and the next dam by imported Rockingham—the sire of the dam of Sir Archy—the produce was Young Bashaw. From Young Bashaw came Andrew Jackson, one of the great trotters of his day, and according to William T. Porter—a capital judge—a very blood-like animal. Long Island Black Hawk is the next name in the pedigree, and in this horse was united the two great families, Bashaw and Mambrino. The Messenger came in in the first remove, and as the history progresses it will be seen that there were still further additions of Mambrino blood. Long Island Black Hawk was emphatically one of the great trotters of his era, capable of pulling any reasonable weight and pulling it fast, too. He begot Vernol's Black Hawk from a mare by Webber's Kentucky Whip, and her dam was by Shakespeare, a son of Duroc. Vernol's Black Hawk was a very handsome horse, of the same color as his sire, black, and one of the noted road horses of New York. From Vernol's Black Hawk came Green's Bashaw, the dam of which was by Tom Thumb, and her dam was the dam of Rysdyk's Hambletonian. This horse we were well acquainted with. He was brought to Iowa when young, and we saw him trot nearly all of his races. He was a very handsome horse, and one of the "speelies" of his day. Far faster than his races showed, as in that country and at that day the training of trotters was not so well understood, and the "ordering" him for races took away his speed. We have seen him trot a half mile in 1:08 and do it so easily that 2:20 would appear within his limit. He was very true in his action, and as eleven of his get are in the 2:30 list no further proof is required that he could perpetuate his qualities.

We well remember a very pretty bay horse which a Mr. Wetherbee brought from the East, and stood in Illinois and Iowa. This was Prophet, a son of Vermont Black Hawk, and a daughter of his was bred to Green's Bashaw, and the progeny was Iowa Chief. Corisande was a daughter of Iowa Chief and he trotted in 2:24.

Buccaneer is also a son, and his dam was Tinsley Maid, by Tinsley's Flaxtail, and the second dam Fanny Fern, by Irwin's Tuckahoe. The pedigree of Flaxtail is not established though the weight of evidence points that her sire was Wilson's Blue Bull, and one thing is certain, that he was a horse of phenomenal speed as a pacer. Fanny Fern showed a public trial in 2:28, and her dam was by Leffer's Consul. The pedigree of Buccaneer shows a mixture of fashionable strains that betokens a trotting inheritance, and that his colts are destined to play a prominent part is well assured from what they have already done. When Doctor Hicks brought Pride to the Oakland Trotting Park, soon after she was a year old, no one would have supposed that before the season was over she would score such a performance as to give her celebrity wherever the fast trotter was known.

She had wintered poorly, was small and thin in flesh, and to one who was not acquainted with the beneficial effects of training it would have looked like cruelty to impose the task of hauling a sulky with a man in it. Even with the best of care it required months to give her a start, and there is little question that the "start" was equivalent to a loss of several months. When she did "round to" it was astonishing how rapidly she fell into a handy way of going. She was a "borned trotter," as the Kentucky darkies say, and developed a rate of speed that surprised everyone who saw her at work. It is scarcely necessary to do more than refer to her mile, in yearling form, in 2:44, to show how rarely she was gifted, and her improvement since then has been commensurate with her early promise. Not only improvement in speed, as the fragile looking filly has developed into a muscular, highly-formed two-year-old, and in the race for the Embryo Stakes there is scarcely a doubt that in the third heat she could have excelled the previous records for colts of that age in an actual race, as she almost walked in 2:33.

But the trotting gift is not confined to this remarkable filly, as all of the get of Buccaneer, that had any work, show that they possess the knack.

Flight when a two-year-old showed a trial in 2:44, and got a record of 2:52. The following year although she did not appear to be quite "at herself" she won a heat in Stockton in 2:35, and as she was trotting against Albert W, it was something to deprive that good colt of one game in the rubber. She also won a heat from him at Sacramento the week before the trot at Stockton in 2:42, getting second money in both races.

Privateer trotted in 3:05 when a yearling, after being a very short time in training, and there has never been one of the get of Buccaneer trained which did not show a fine turn of speed. This is not the only merit, as they are highly formed, of good size, rugged and strong constitutions, and in the show ring at Sacramento State Fair, five got first premiums, and a yearling was also successful in getting first wherever shown.

Buccaneer was bred by Dr. M. W. Hicks, then living at Keokuk, Iowa, and foaled in 1874. While the picture is a capital representation of him, there are, of course, points that cannot be shown. In color he is a dark brown, verging into black in places, with shadings of wine or tan color. He is a handsome horse from every point of view. Nearly sixteen hands in height, with fine length and his muscular development, especially in the quarters, immense. He has shown 2:24 in his work, and a rate of speed in brushes much faster.

A natural foot may not be perfect, and then there may be advantages in artificial appliances. But in a large majority of animals the feet are nearly right, if Nature has not been tampered with in the effort to make them so. If permitted to exercise on the same kind of ground which would be chosen in a natural range, it would be rare, indeed, when there was much divergence from the true form. By a natural range, we mean that part of a country which would be selected by horses which could follow what is called instinct, but which is so nearly allied to reason, that we never could see where the difference was. With the herbage equal, there will be a general resort to the highest ground; and if it is necessary to leave it to find water, as soon as thirst is assuaged, the band will return. Left to themselves, the firm ground is invariably chosen, and though they may be driven to seek refuge from flies by standing immersed as much as possible, there is a disinclination to wet their feet and legs. The whole system of soaking the feet, stuffing with clay, cow-dung and hoof-pads is entirely contrary to nature; and the use of hoof-oilments of any description a departure which will end in injury. Even the washing of the legs is carried to an extent which does damage, and, as a rule, water should never be applied to the horn. It may require more work to cleanse the feet of the dirt which has been gathered in a drive through the mud, and to wash them and the legs with water is a labor-saving contrivance for the groom, but is a positive injury to the feet, and has also a tendency to crack the heels. There is trouble enough from the liability of the skin to crack between the foot and pastern without aggravating a tendency which is unavoidable at times, with the best of care. Cracked heels are one of the most pestering things which the trainer has to contend against in the category of minor troubles, and frequently they are of major importance. Not alone from the pain which causes the animal to shorten its stride, but in aggravated cases, the inflammatory action extends to the tendons, and the breaking down which results, if the work is continued, is due, perhaps, to the use of water. The erroneous impression which is so prevalent that moisture is beneficial to the foot has done great injury.

This has arisen from the palliation of the injuries which resulted from improper shoeing, and from the mutilations of the foot, which it is thought that it is the imperative duty of the blacksmith to accomplish. This renders the horn brittle, and temporary elasticity is gained by the artificial moisture. The natural foot has none of its functions impaired. The secretory vessels are allowed full play, strengthened by action, and the deposit, consequently, is of the right character. The thousands of minute tubes are filled with healthy fluid, and these are not marred by knife or nail. When worn away by the attrition between the foot and the ground there is the same safeguard against depletion as follows the searing of an artery, and the lower portion is glazed with the friction, which also accomplishes another beneficial duty, viz.: the prevention of absorption of moisture. Anyone who will take the trouble to examine the natural foot of the horse will find that ample provision has been made to exclude water. The horn is coated with an enamel which is as impervious to the entrance of moisture as a plate of glass, and the sole in a natural state will also exclude it. This phase of the foot question was forcibly presented from a conversation with a gentleman a few days ago. He had formerly been a blacksmith, but for the past number of years has been engaged in driving cattle, formerly from Texas and later from the mountain ranges. We obtained much valuable information from him, which will be briefly, and only in small part, alluded to now, as we hope to have a longer interview, and which we will endeavor to make a more satisfactory record of. He has had an experience which falls to the lot of few, and possessing keen powers of observation, he has been benefited by the experience in an unusual degree. With 250 saddle-horses in his employment, engaged in as arduous duties to try the feet and legs as could be imagined, we were prepared to hear him staunch in his advocacy of a natural foot, though we expected that more of the antiquated notions of the shoeing forge would be exhibited. One remark he made will be the limit in this article. "Give him," he said, "a horse with bad feet, no matter how bad, so long as the natural functions have not been entirely destroyed, and by the time there is growth enough to remove the brittleness from the nail holes down the core in most cases will be accomplished." His treatment was to turn him barefooted on a proper range, and in place of this being the marshy ground which is usually recommended it was hilly rolling land. This he further illustrated by experience with a large band of cattle which he bought. They had become so foot-sore that they could not be driven, and were then feeding on the low ground. After the purchase he transferred them to the hills, and in a short time they were able to travel. The brittleness below the nail-holes is doubtless caused by cutting the tubes. The perforations which are made by the nails cut off the supply from above, and the cutting to prepare the horn for the reception of the shoe empties the lower part of the tubes of the fluid which gives vitality. We have had a capital illustration of this in Lady Viva, a filly which was two years old on the 3d inst. Nearly a year ago she suddenly exhibited lameness and most careful examination failed to discover the cause of it. Feeling that it was probably in the foot, every method was followed which promised elucidation, but without avail. It was several months before the cause of the trouble was manifest. She had a habit of climbing on the fence, resting her feet on the bar to which the boards were nailed, in order to look over, and, doubtless, got a redwood sliver in her toe, at the junction of the sole and wall, which broke off so far into the horn as to escape the search. This came through at the coronet, leaving a crevice of three-quarters of an inch. This of course caused a separation of the horn, and though after there was growth enough to relieve the pain, the lameness vanished, it had been of such long standing as to interfere with the proportion of the foot. The one affected is still a trifle smaller than the other, and with higher heels. This came from the inflammatory action while the foreign substance was in the foot, and by keeping that part cut down so that the frog was brought into play, it has spread to nearly the natural proportion.

The crack in the horn was nearly three-quarters of an inch above the ground surface of the toe. When we began to drive her on the road, and not very long afterwards, the toe broke away, leaving a gap the width of the crack. This compelled putting a tip on that foot, and in order that there should be no disparity, a tip was also put on the other. The tips weighed nearly four ounces each, and were put on the 15th of February. The driving commenced on the 8th, and she was driven entirely on the macadamized streets of Oakland, the others being too muddy to exercise her upon. The well foot was slightly worn at the toe, though it did not require any "protection," and the intention was not to use even the tips for some time, if at all. On the 7th of March,

she lost the tip from the broken foot, and returned from the drive with the toe broken for half an inch or more on each side of the gap. That this break came from the brittleness caused by the separation of the tubes is evident, for the hind feet which have not been protected, have not broken a particle, and are in capital condition. On the following day a tip was put on, and in order to set it properly, the horn had to be cut sufficiently to reach that which had been deposited since the break at the coronet. There was a palpable difference between that and the brittle portion, the former being much the toughest. The junction of the wall and sole gave evidence of the injury, there being an entirely different appearance at the point of contact from that of the well foot. If the examination had been thorough enough at the time of the injury to discover the sliver, the extraction of it would have saved the foot; and though the cutting necessary might have resulted in more acute lameness, it would have been for a brief period. We were much disappointed in not being able to try the experiment of using a natural foot without protection of any kind, but in this case will have to confine the tests to the hind feet. There is more of a sliding motion behind than in front, and as a general rule, the hind shoes have to be replaced while those in front are comparatively unworn. Some of the fast trotters will wear a hind shoe entirely out in two weeks, the front having only a slight bevel at the toe.—*Advance Sheets "Tips and Toe-Weights."*

CORRESPONDENCE.

New York Letter.

NEW YORK, Nov. 23, 1882.

EDITOR BREEDER AND SPORTSMAN: Yesterday formally closed the racing season in this vicinity, for while that prerogative has generally been claimed by our American Jockey club's extra day in election week, this year the Brighton Beach Racing Association, having in its favor very exceptionally fine, mild weather for the season and plenty of horses, concluded to prolong its November meeting throughout the month if possible, and it actually reached the unprecedented number of 100 days' racing since May last, yesterday's "centennial" bringing up the total amount of money given to the winning stables during this period to over \$105,000! Truly an unexampled and unequalled showing by any racing association in this country, or any other, for that matter. A notable feature also of the close of the third year's existence of Mr. Eugeneau's much abused and much maligned track was the perfect harmony and absence of all strife of any nature which characterized yesterday's finale, something which could hardly be said of the last days of '80 and '81, when the racing was wound up, not exactly "in a blaze of glory," as on the present occasion, but in a much less satisfactory and brilliant style, considerable dissatisfaction (merited and unmerited) being then felt and openly expressed by not a few of the patrons of the racecourse by the sea. But 1882's good work will doubtless serve to soothe many a (Brighton Beach) turfman's troubled breast and prevent the resurfacing of any dry bones or old scores of the former troublous days. The track has before it, with continued good management, a great future, for the next few years is likely to greatly increase its patronage, the great projected course of 1883 at Rockaway to the contrary notwithstanding. This latter project was thought at first glimpse to be the nucleus of a very formidable rival to both the C. I. J. C. and the B. B. R. A., but sober second thought has dissipated any such probability, and if the new enterprise on the beach at Rockaway ekes out a bare existence, it will be more than most turfmen hereabouts give it credit for.

A much more likely to be profitable venture just now, is the projected lease of the grounds of the Louisiana Jockey club at New Orleans, the old far-famed Metairie racecourse, by the proprietor of the aforesaid successful track at Brighton, W. A. Eugeneau Esq., and if anyone can make continuous winter racing at the Crescent City popular, it will be this same "beach-comber" and his co-adjutors, who are just now in the very front rank as popular caterers to the taste of the racing public, and their number in these parts is legion.

Two of our most celebrated thoroughbreds have left these parts for "fairer fields and pastures new." What is our loss, however, is Kentucky's gain, for in Hindoo and Falsetto the blue grass region has two stallions with prospects second to none as probable sires of first-class turf performers, the former being without doubt the best horse on the American turf since Lexington's time, and the latter the champion three-year-old of 1879, the conqueror of the equally-famous Spendthrift. Hindoo goes to the home of imported Billet, the now widely-known Runnymede farm of Messrs. G. W. Bowen & Co. at Medway, Ky., while Falsetto now trends the aristocratic precincts of Alexander's turf-harem at Woodburn. The exact figures at which the great son of Virgil and Florence changed owners have not yet been made public, Messrs. Bowen & Co. purchasing at the same time from the Dwyers two Leamington brood mares, and tendering in part payment the famous two-year-old filly Miss Woodford, by Billet, but the price of the horse was probably in the neighborhood of \$12,500, and the exchange price of Miss Woodford something like \$7,000.

Falsetto was sold by Mr. Lorillard to the Alexanders for \$7,500 and he should be worth every cent of the money, though the number of stud sires now at Woodburn is rather out of proportion to the family of stud mares. Mr. Brodhead will, however, see to this, so if any one has any desirable brood mares for sale they know where to find a market for them. But at this present writing, what with the purchase of Miss Scott, Young, Kittson and others, anything above the grade of mediocrity is quickly snapped up and it looks as if horse flesh will not be a drug in the market for some time to come.

Probably the finest looking, as he certainly is the highest priced specimen of the high type thoroughbred horse that ever reached these shores from away "over the briny" is the recent \$33,000 importation of Mr. W. L. Scott of Pennsylvania railroad fame, the mighty Frenchman Rayon D'Or (red gold).

Landing at the pier after an exceptionally rough and tempestuous ocean voyage in all the fire of virile health, he clearly showed to every bystander the possession of a wonderful reserve power and stamina by the kingly style in which he trod the shores of his new home, causing observers

to wonder in amazement at such great vitality and nervous force, when is taken into consideration his recent arduous experience of the buffeting of old ocean, an experience which proved so fatal to his illustrious predecessor, the ill-fated Blue Gown. In fact, two of Rayon D'Or's companions on the voyage in question succumbed to their trials and found a grave in the mighty deep, and in a horse of such a character, the Erie stock farm and the country at large has found a prize indeed.

Since the son of Flageolet has been domiciled at the American Horse Exchange in this city, he has been the cynosure of all eyes and the throng has been so great as to cause the restriction of the constant showing of the horse, as, like most nobility, too much attention made him fretful and uneasy. The future stud career of this magnificent animal will be watched with great interest by all interested in breeding, for here is a horse of unusual power and size (16½ hands), a first-class racer himself, of unsurpassed lineage, embracing the most illustrious names in the French and British stud books, and if he fails (with proper advantages) to beget his like, why then breeding is more or less of the lottery that many claim it to be. Hon. Leland Stanford's young trotters that are now sojourning with us at our Gentlemen's Driving Park are in great fettle just now. Marion, the old pilot of the great Smuggler, is handling them with rare skill, and yesterday Hinda Rose trotted a half-mile in 1:10½ and Wildflower the same distance in 1:08. The track was rough and frosty and both performances are great, when the very tender age of the youngsters is remembered. The Governor was present at the trials and unless a match is made for Wildflower in the next two or three weeks, the whole stable will return to their home on the Pacific slope. Their popular owner will remain here and spend the winter with us.

Another shipment of fine stock that will soon be made to your State is now under waiting orders. They do not come under the head of quadrupeds but are of the biped persuasion. I refer to the herd of twenty-three ostriches now in our Central Park, where they are recuperating prior to shipment to California. Ostrich farming is rather a novelty in these parts, and the great birds have been the recipients of great attention, but on the sunny slopes and ranches of the golden State there is no reason why they should not thrive and multiply with as great success as on their own native pampas.

Your fellow townsman Jno. McCullough is still creating, under W. M. Conner's able management, his furor of old. Genial John says his old parts draw well enough. When they outlive their usefulness he will then think of new ones. Yours, PACIFIC.

The Petaluma Colt Stakes.

EDITOR BREEDER AND SPORTSMAN: The prospectus of the Sonoma and Marin Agricultural Association for three colt stakes, to be given annually at the time of holding their agricultural exhibition at Petaluma, will probably be found elsewhere in this paper. That races for colts are now becoming the principal and most interesting events of the turf, there is no longer any question, and that the enterprising managers and directors of "Old Sonoma" and Marin are awake to this fact, their prospectus most fully demonstrates. The races named are for the respective ages of one, two and three years old, and beyond a doubt (if carried out) the result will be to promote a greater improvement in stock breeding than any open stake that has ever been offered since the organization of any agricultural association in the State. One of the most encouraging features is the low rate of percentage charged as an entrance fee on the amount of stakes and purses to be trotted for. The estimate shows that each main stake will not fall below \$2,500, for which each nomination will be required to pay, in all, \$50, and even this small sum is required in three quarterly installments of \$10 each; with a final fee of \$20, on the day of trotting for positions.

Hence the entrance on the whole amount of money to be trotted for in each stake will not exceed two per cent., and each entry thus paid will have a chance to win one of eight prizes, four of which will be found in the first, and four in the second class, whereas, heretofore, an entrance fee of ten per cent. has been invariably charged on all purses throughout the circuit of the fairs, with a chance at only the three divisions of the purse, or stake. Beside the advantage here in accruing directly to the stock breeders, the plan of dividing each main stake into two classes will greatly benefit the exhibition, as the programme will show that from the three main stakes there will be derived not less than eighteen interesting contests for the twenty-four prizes contained in the three stakes. This calculation is, of course, based upon the theory that in each stake there will be at least twenty starters for positions. This will give four classes of five in each, to trot under separate timers for starting positions in one of the classes. Then the six starters in each class will add two more events to the four already named, making six actual contests in each main stake, none of the entries being required to trot, but for positions, and for the money, should they get a place.

That this will prove one of the most popular schemes to encourage the breeding of fine horses, and to develop the merits of our best strains of trotting blood, I most freely predict. RAMBLER.

SADDLEBACK, EAST BALDWIN, Maine, Nov. 27, 1882.

EDITOR BREEDER AND SPORTSMAN, Dear Sir: Your paper comes regularly to me, and I find much of interest in it, although I am so far from the seat of action. Having a large correspondence, taking the prominent stock papers of the United States, I being familiar with their merits, I know of none East which equals your paper. I wish you were located here (East) or that some of our old fogies would pattern after you. As a stock breeder I would quickly add my mite to your aid by advertising.

Let me also say, the recent illustrations of horses were unusually fine; our best do not equal them. I notice the quality of your paper stock, which may account in a measure for the freshness of the picture.

I take the liberty to send what is considered in New York one of the best wood-cuts yet printed. You will see it is not so fine as yours. I also add some photographs of my stock, etc. Very truly yours, ONESTES PIERCE.

NEW SOUTH WALES SPORTING.

Our Regular Letter—An Exodus of Turfmen Drawn by Melbourne Attractions.

SYDNEY, Nov. 1, 1882.

Sporting matters in New South Wales are very stagnant and Sydney at the present time of writing is drained of every individual who has any pretension to follow racing. During the past ten weeks it is wonderful to note the lengthy list of overland passengers to Melbourne bent on paying a pilgrimage to the shrine of Flemington where the great Victoria racing club spring reunion is drawing to a close. Before narrating on the V. R. C. events it would be just as well for me to tell of the results at the Victoria Amateur Turf Club meeting held at Caulfield, 7th and 14th of October. This meeting under the able secretaryship of Mr. N. R. D. Bond, late sporting editor of the Melbourne Leader, promises to be second only to the V. R. C. spring meeting judging from the great attendance, large fields of horses and general excellence in management. I shall not weary your readers with any lengthy sermon about the different events but give them in brief. Fine weather (a grand essential towards the success of a meeting) prevailed both days, but perhaps a trifle dirty. The ball was opened by a remarkably well bred two-year-old named Malparinka, by Proto Martyr from Sybil, winning the selling race of \$500. His sire is by St. Albans (English), sire of Stockwell, from Laura G. by Orlando, while his dam Sybil is by English Tim Whiffler, got by Van Galen, son of Van Tromp. The hurdle race fell to Sportsman, carrying 156 pounds, and was ridden by the crack cross country rider, Tommy Corrigan, the two miles occupying 4:7½. St. Lawrence, by Glorious (imported) from Perfection, appropriated the Great Foal Stakes of \$1,000 for two-year-olds. The Caulfield Guineas, the race of the day, and for three-year-olds, colts, 117 pounds, fillies, 112 pounds, was won by the Hon. Wm. Pearson's sire Fryngpan, by Bethnal Green (imported) from Saucepan; Boolka, by Glorious, second, and Guesswork, by Gang Forward (imported), third. The distance, one mile, occupied 1:47. The Amateur Challenge Cup steeplechase for gentleman riders was won by Mr. E. Miller's grey gelding Marquis, carrying 163 pounds, Glowlight, 175 pounds, second. Verdure, by Bethnal Green, wound up the day by winning the Toorak Handicap, carrying 107 pounds and running the mile in 1:46. On the second day the weather was fine but rather dusty and in the last race the riders could hardly see one another so great were the clouds of dust. Proceedings commenced by Lord of Clyde, 133 pounds, an animal fresh to jumping fame, winning the second handicap hurdle race, Merrymaid, 135 pounds, second, and Sportsman, 165 pounds, third. In the Nursery Handicap for two-year-olds Delusion, a filly by The Englishman (since dead), a son of English Edminster and Gebriede Lady, won; fifteen others also ran. The *piece de resistance* of the gathering now came on for decision in the shape of the Caulfield Cup, a sweep of \$50 each with \$2,500 added in addition to a gold trophy, value \$1,000, the gift of Mr. A. R. Blackwood, the second horse to receive \$500, and the third \$250; distance one and one-half miles. Assyrian was first favorite in the betting, and after being backed to win an immense sum of money, starting at 1,000 to 40, went to the post at 1,000 to 200 offered, 60 to 10 Fryngpan and Verdure, 200 to 10 Douglass, 100 to 7 Little Jack, 100 to 6 each Gipsy Cooper, Gudary and Darebin. A field of 32 horses faced the starter and after a little delay Mr. Geo. Watson despatched the lot on very even terms, Douglass being the first to get on his feet but was quickly passed by Verdure who took up the running at a great pace and led her field into the homestretch followed by Fryngpan, Little Jack, Gipsy Cooper and Assyrian. At the half distance Verdure looked all over a winner but going wide from the rails allowed Little Jack, who came with a great run, to come up on the inside, and just manage to heat the mare by half a length, Gipsy Cooper third two lengths away, then came the favorite, who had been interfered with in the race through colliding with Darebin and thereby throwing him out of his stride. The winner was not backed by the stable, they fancying in Mistaken they had a better colt. Joe Thompson the levithau pencil never wrote his name in his book. Little Jack is sired by imported King Cole, by King Tom, by Harkaway, his dam Charade by Panic, by Alarm, by Venisou. The Fridon Harriers' Gold Vase (gentleman riders) was won by Mr. Phillips' Blackthorn, 166 pounds; Alhambra, 172 pounds, second; Highflyer, 184 pounds, third. The above race is about two and a half miles over good stiff fences of over four feet high. Sailer (late Red Rover) won the open steeplechase. The meeting was successfully terminated by the Hon. W. B. Rounsevell's bay colt Prometheus, by Tubal Cain from Lurline, winning the Windsor Handicap of six furlongs, beating Saionara and twelve others. The betting was 60 to 40 on Prometheus.

All the attention of turfites is now centered in the great V. R. C. spring race carnival. The first day, 28th October, opened auspiciously, meeting with fine weather, large fields and good racing. Ten horses faced the flag for the Melbourne Stake, 1½ miles, weight for age, which was won by Darebin, 4 years old, 126 lbs., the Derby winner of last year; Belmont, 3 years, 112 lbs., second, Larpen, 6 years, 120 lbs., third. Time, 2:13. The Hotham Handicap, 1½ miles, and a distance was appropriated by Odd Trick, aged, by King of Clubs, a grandson of Stockwell's, carrying 104 lbs., Sardonyx, 4 years, 117 lbs., second, Commotion, 3 years, 131 lbs., third. One of the richest prizes given during the year is the Maribyrnong Plate (the Middle Park Plate of the Antipodes), a sweep of \$150 cash with \$2,500 added; two-year-old colts 8 st., 10 lbs., fillies 8 st., 5 lbs., distance 5 furlongs. New South Wales seems to have a mortgage on the annual event, and has won it six times out of the past seven years. This year there was a field of 26 starters and it fell to the Hon. E. K. Cox of Fernhill stud, one of our largest breeders, and perhaps one of the most successful. The winner, Narevia, is a racing-like black filly, by Gattendou (since dead), from Atholme, the dam of Geraldine (Hawkesbury Guineas winner); her dam was got by Blair Athol out of Habena by Irish Birdcatcher and her sire, Sir Hercules Kingsdale, was second and is by Maribyrnong from Rosedale (imported), her sire Tynedale, dam Thrift by Stockwell, consequently a close relation to Tristram. The South Australian filly Lady Jervois, by Emulation from Talkative, was third. Time, 1:4½, a trifle slower than last year. Another great event of the day was the Victorian Derby but in my own mind there could be little doubt about the result and it seems ridiculous how some people would persistently back Segenhoe after the had beating he received from Navigator in the Sydney Derby; still the fact remains that many backed the former. When the horses were stripped in the paddock for inspection the general verdict was, as Mr. E. De Mestre's black colt, Navigator, stood quietly and as calm as if there was nothing the matter, that he had undergone an excellent preparation. His skin shone like satin, while his

ribs were clean and his shoulders and thighs exposed good bosses of muscle, his head and throat as clean as could be desired. Segenhoe looked lighter than at Randwick, but as "mean as a fish" behind; he seems to have grown all in front with nothing left to propel him. Calma is a remarkably nice colt; so are Guesswork and Fryngpan, but the latter is a fractious brute; in fact the whole family were the same. Boolka I rather liked in condition, but he stands a trifle "in the leg" and appears more suited over a mile journey. A good start was effected, Guesswork going to the front and making most of the running. Racing along the even stretch Segenhoe slipped and lost several lengths. At the back of the course Guesswork and Transferred were leading two lengths. Approaching the scraping sheds and about half a mile from home Segenhoe and Navigator began to draw up to the leader. Swinging around the turn into the homestretch the order was Guesswork a length, Transferred and Segenhoe together, half a length off Navigator and Fryngpan, then Boolka and Standard Bearer. On reaching the distance post Guesswork hung out signals of distress and Segenhoe and Fryngpan commenced the battle of supremacy, and either looked a winner for the instant when Hales (on Navigator) called on the favorite and answering the summons was lauded a winner by a clean length, Fryngpan second after beating Segenhoe on the post by a head. Cheers rent the air at the favorite's win as the public were large investors and the ring was now getting badly treated; the double Narevia and Navigator was backed for a "ton of money." Navigator hails from New South Wales and is sired by Robinson Crusoe, the only surviving animal that went out in the City of Adelaide steamer when so many good racehorses met with a watery grave. His sire, Angler, is a son of the old Heron horse Fisherman, dam Cocoonut, (imported) by Nalbourne from Miss Vivian. The mile and a half occupied 2:41½, which we reckon good time for a Derby. The Essendon Stakes, weight for age, 2 miles, was won by M. E. De Mestre's Sylvanus, 3 years, by Robinson Crusoe, carrying 104 lbs., and the day was brought to a close by M. J. Patterson's Wizard, 3 years, 101 lbs., winning the Coburg Stakes. The last three winners were ridden by our crack horseman, Tom Hale, the "Australian Fred Archer."

The weather on the 31st October (Tuesday), which promised to be fine in the early morning, completely altered, and when the horses returned to scale for the first race the rain came on, consequently the umbrella display was very large, considering there must have been nearly 75,000 people on the ground thus early in the day. The ladies were present in great numbers, their costumes being most magnificent. There was not accommodation in the grand stand for half of them, and, what with the dust and wet, their dresses must have suffered somewhat by the time the Cup was run. The attendance was one of the largest ever seen at Flemington. Belmont and Calma were right away from the others at the finish for the Maiden Plate, the former winning by a length. The winner is rather a nice looking colt by King of the Ring from Idalia, an own sister to Breiseis. In the Railway Stakes, Boolka, by Glorious, at last repaid his admirers a trifle of what he is indebted to them for past failures, in appropriating the above mile and a quarter race in 2:13½, which was fair going. The South Australian filly Lady Jervois maintained a superiority of pace over Halifax, hailing from Sydney, and Off Color, landing the Kensington Stakes in good style. The greatest surprise was now in store for hackers, and as the rain began to descend in torrents the hopes of some backers dropped below zero, while to others it was highly acceptable, but in the end it suited few, the bookmakers as usual being immense winners, and may be said to have "skinned the lamb." When the 25 came to the post for the Cup, the usual breathless anxiety was noticeable among the onlookers until the flag fell and effected a good start. The early portion of the running was made by Flying Jib until nearing the stand, where Stockwell took up the running and carried it along at a merry pace as the field swept along the river stretch, Lord Burghley and Stung bringing up the rear. Assyrian, Gudarz, Little Jack, Darebin, Brunette, and Mistaken were in close attendance on the leaders, and when racing past the abattoirs Stockwell held a clear length and a half advantage of Gudarz and Little Jack, then Mistaken, getting into a more forward position. At the scraping sheds the field began to look spreadeagled. Stockwell swung round the home turn with a clear lead, next to him being Gudarz, half a length. The Assyrian and Darebin, two lengths Sweet William and Lord Lisgar, then came Segenhoe and King of the Vale, Mistaken beaten off. A splendid race ensued at the distance, ending in Assyrian just beating Stockwell by a length, while an exciting tussle between Gudarz and Darebin resulted in the latter being defeated by a head for third place. Then came Sweet William, Mistaken, Segenhoe, Cunnamulla, Little Jack, the remainder coming in at length intervals, Stung, Savauaka, and Jessie being last. Time, 3:40. The winner is a very handsome horse, and full of quality, and was perhaps the fittest animal at Flemington. He was trained by Mr. Savill, of South Australia, and is owned by Messrs. Thos. Barutfield and J. Allison, well-known residents of Adelaide, and by this win they will have landed a nice stake. Assyrian, it will be remembered, started a very warm favorite for the Caulfield Cup, but was interfered with in the race, having collided with Darebin, which effectually spoilt any chance he may have possessed of winning. The winner is by the defunct Countryman, a son of English Stockwell, from the New South Wales mare Tinfinder, bred by Mr. Baldwin, and got by New Warrior from Deceptive, by Yelverton. Had Stockwell, the Tasmanian horse, won, it would no doubt have been a popular win, while Gudarz would have given the ring a "jar." It will be seen from the above that Victoria was not placed in the great V. R. C. Spring handicap of 1882. The St. Albans stable appear to have been in pretty good form, as they won the Darling Stakes with Essex, easily defeating Tamworth and Sinking Fund. In the Van Yean Stakes, Bagot scored a win for Tasmania, and this in a manner will compensate Mr. T. Reibey for his defeat of Stockwell in the Cup. It is worthy of note that all our principal winners so far are descended from Stockwell mares, a fact which our breeders are not slow to perceive. There is nothing of any moment transpiring in the trotting world.

Aquatics.

The yachting season has just opened and the harbor presents quite a flotilla of craft of all dimensions, but the weather has sadly interfered with the opening regattas, several having to put up with postponement through the inclement weather. In my last I mentioned the Francis Punch Trophy which was rowed for on the Parramatta river, and the less said about the result the better. Mud at any time will not stand stirring, and the above race was "very muddy." A good, honest, straightforward sculler won the race in Michael Rush, the Clarence river man, and a man of almost independent means, but an immense enthusiast of rowing. Beach, who was second, is comparatively unknown to aquatic fame, while Laycock rowed third. To show what the intentions of Laycock were, he offered, at the paying over of the prizes, to row the winner for \$1,000, but Mr. Rush

quietly refused to meet him, an action which meets with general approval here.

J. C. Laycock, a brother of Elias, won a race on the Parramatta river last Saturday for \$75 a side against Sam Edwards. It was a hollow affair. Edwards protested on the grounds that Laycock had not pulled in an equal boat to his opponent.

The wet weather during the past two weeks has stopped cricket and nothing in the "big match" line has occurred. Great preparations are being made to relieve the Australian cricketers, who will be banqueted on their arrival in Sydney.

TURF AND TRACK.

Turf Reform.

The easy victories of Larpent and Abdallah in their respective races at the Melbourne Hunt Club Meeting afford the most recent example of the little effect weight has upon a really good animal when well, and an other argument in favor of a fixed lowest top-weight in all races, varying with the distance to be traversed, but beneath which the handicapper may not begin his allotment of burdens. That the farther the above named horses had to go, so much the farther they would have beaten the fields on Saturday last, was plain to every spectator, and a three-year-old, with 7st. 2lb., and an aged mare with, 7st. 7lb., were, out of Larpent's thirteen opponents, the only ones that were capable of the semblance of a struggle with the big son of Cœur de Lion in the last part of the journey. That he had the race won at the turn home was palpable. As soon as the weights appeared, it was expected to be run in 1:45, and thus practically all but half a dozen were denied a chance.

That this is no individual instance of the inability of moderate horses to compete with really good ones when the latter have a racing weight is shown by manifold instances, Darebin's Adelaide Cup being a recent example, and of horses who ran at home, and whose descendants we have here, Fisherman, Rataplan, Chandos and Vespasian won under all burdens from two-year-olds up, and yet left the turf sound. Chandos, imported by Mr. E. K. Cox, won under 14st. 5lb., and ran thirty times; Rataplan, sire of the Drummer, won under 10st. 4lb., and ran seventy-one races, winning thirty. Vespasian, also imported by Mr. Cox, carried 10st. 4lb. and won the Chesterfield Cup. Fisherman, Mr. Fisher's old favorite, ran one hundred and thirty-six races, of which he won ninety-six, often carrying over ten stone, over three and four-mile courses. Thus the fear of crushing a good horse may evidently be set aside. The fact remains that horses are far more likely to receive injury in the hands of light-weight boys, who have not the strength to hold them together, than in the hands of men who have thoroughly learnt their business.

That horses do their work as well under heavy weights as under lighter burdens was shown by contrasting the race for the Melbourne Hunt Club Cup with that for the Open Steeplechase. A dozen started in the first-named event, ridden by amateurs, and at the turn home the whole field were well together, none having fallen in the race, the weights varying from 13st. 4 lb. to 10st. 7lb. In the Open Steeplechase, with nine runners in professional hands, with weights ranging from 11st. 6lb. to 9 st., only four got round without mishap, the top-weight winning.

Although we fear that we may perhaps weary our readers by continuously harping on this theme, the importance of the subject dealt with is our excuse, for only by persistence can reforms be effected. About two thousand horses ran in the Australian colonies last year, and of these only two hundred and twelve horses are credited as having won one hundred pounds or over. Only forty-two have won five hundred pounds or over, and only thirteen have appropriated prizes of or exceeding one thousand pounds.

We thus see the immense proportion of animals which, despite high breeding and high prices paid for them, belong to the moderate and the bad division. We advocate fair handicapping, so that any horse who, under the lightest burden that can be legally assigned him, can exhibit ordinary racing qualifications shall have a chance; but we are most decidedly opposed to any reduction of the present minimum weights in handicaps, as we consider those now in vogue barely heavy enough, and should much prefer seeing 6st. 7lb. the minimum at distances exceeding a mile, and 7st. and under that distance.

Already owners who have purchased horses at large prices, which have since turned out to be but moderate, are after a couple of years of expense therewith obliged to throw them, though sound, out of training, as unless a horse can run a mile and a half in 2:43 at Caulfield, or 2:38 at Flemington, he is denied a chance in any handicap; and suggestions are made of following the American trotter system, and establishing class races for horses that have never beaten 2:47 for a mile and a half, or 3:40 for two miles, so that some chance of earning their oats may be afforded the third rate division.

Whilst we utterly condemn this suggestion as only opening a door to fraud in causing good horses to be run byes and waited with, it shows how tightly the shoe pinches, and until it is impressed on our officials by the chief club that no horse's chance is to be absolutely annihilated, we can hardly hope to see horses properly brought together.

We have before this urged on the chief club the propriety of appointing a second handicapper, of taking the whole handicapping of clubs racing under its rules into the hands of its officers, and of having one of these officers present at every country meeting and at all the principal meetings of the sister colonies, each officer comparing with the other, but each making his own handicaps; the labor being thus divided, whilst each would avail himself of the knowledge of the other. The fees the chief club would derive from the various country clubs would go far to pay its handicappers' traveling expenses to the various meetings; and the position of the club and its prospects fully warrant the payment of much larger salaries than the one now paid.

Then, when handicapping is by the club's stern direction made a reality instead of a farce, means should be taken to prevent the handicappers' labors being neutralized by the inability of the starter. In Melbourne we are fortunate in securing the services of a gentleman who has no rival; but at country meetings, the infinite variety of bad starts is amazing. Flying starts are strictly forbidden by the V.R.C. rules, yet at every meeting they are witnessed, whilst at the principal meetings away from the metropolis horses are started inside the posts, thus rendering the race null and void, without even eliciting comment, and in nearly every instance the press chronicles a bad start. It might also be well if horses that do not want a good start, of which some are noticeable at every meeting, were quietly reported by the starter for the handicapper's information.—*Federal Australian.*

RACING REMINISCENCES.

J. B. Thomas and his Best Races—Chicago, Grand Rapids, Battle Creek, etc.

In the spring of 1881 Mr. L. P. Thompson of Clarence, Ia., placed in my charge the bay stallion J. B. Thomas, by Sterling, dam by Defiance. When the horse came to me, which was about the 1st of June, he had a record of 2:34, acquired the previous season, and my first experiences with him were of so unsatisfactory a nature that it did not seem probable he would lower those figures materially. In driving him at speed he hitched badly, and was generally so unsatisfactory in gait that I knew at once that a radical change was necessary. I had put sixteen-ounce shoes on his forward feet, and after driving him a few times without any noticeable improvement, concluded that more weight was what he needed. So a six-ounce toe weight was added, and the result was that Thomas at once struck a square, open trot, the extra weight being just the balance he wanted. After working him in the usual manner for a couple of weeks I drove him a mile at speed one morning, and he went the distance in 2:31, with such ease to himself that I was satisfied he would be a good one before the season was over. Not long after this there was a matinee at the Chicago Driving park, one Saturday afternoon, and I started Thomas in a race against the bay gelding Resolution, by Swigert, whose record was 2:27. The race was a mile and repeat, and Thomas won it in 2:31, 2:26, being sent for all he was worth the last heat. A few days after this I sent him a mile in 2:25, so that it will be seen he was coming to his speed all the time. The week following this 2:25 trial I went over to Central Park track determined to learn just how well the stallion could go three heats, for I had never yet sent him three miles at his best clip. The day and track were good, and the time of the trial was, 2:25, 2:23, 2:24, which pleased me greatly, as I could see the horse was going a trifle within himself all the time, and had a steady, rating pace that was sure to make him dangerous in any race where he was not greatly out-classed in point of speed.

This trial took place on June 15th, and a few days later I shipped Thomas to Grand Rapids, Mich., where he was entered to trot in the 2:34 class, June 23d. The other starters were Jerome Eddy, Hermes, Grand Sentinel, Nigger Doctor and Toledo, and as the track was a half-mile one nobody expected that fast time would be made. Jerome Eddy, Thomas, Grand Sentinel and Hermes were all stallions, and the friends of Eddy were very confident that he could win, the horse having shown them some fast miles. They made him a great favorite in the pools, and when he had won the first heat from Thomas in 2:30, the crowd seemed to think the race was over. But I had noticed, in working Thomas, that he had never wanted to go the first mile well, and was not disappointed at the result, although before the race was over Jerome Eddy turned out to be a better horse than I had rated him. In the second heat Eddy and Thomas got off together, and went the whole mile like a double team. Right at the finish, however, Thomas, had a little the most speed left, and was first under the wire by a neck or so in 2:27. Having secured the pole, which is quite an advantage on a half-mile track, by winning this heat, I thought Thomas would win rather easily, but in the third heat Eddy hung to me all the way, and every inch of the mile was contested, Thomas winning by only a nose in 2:24. The fourth heat was much the same, and though Thomas got home first in 2:25, it was all he could do.

This was a remarkably good race for two young stallions to trot so early in the season, one of them reducing his record to a quarter seconds, and winning the heat by only a few inches; and it also showed me that Jerome Eddy was a hard horse to beat. But the most curious feature of the affair was that everybody except myself thought that Thomas was winning easily, when the truth is that I never worked harder in my life to get a horse home in front of another. So when the two horses met again at Iona the following week I expected another lightning race. As before, Thomas would not go well the first heat, which Jerome Eddy won in 2:28, but in the second mile my horse was ready to trot, and I beat Eddy out a neck in 2:24, after a hard struggle; and whenever horses in the 2:34 class beat 2:25 on a half-mile track there is not much room for argument about their having plenty of speed. The third and fourth heats were won easily by Thomas in 2:27, 2:27. At Battle Creek, the following week, Jerome Eddy did not start, and Thomas won easily in 2:31, 2:31, 2:33. On the same day that this race was trotted I saw the black gelding Troubadour beat Helene, big John, Clover, Ethel Medium, Elsie Groff and two others very easily in 2:26, 2:26, 2:27, and as J. B. Thomas was to meet him in the 2:30 class at the Chicago meeting, I watched him pretty carefully, and concluded that he would prove a hard one to beat. After the Battle Creek meeting both Thomas and Troubadour came to Chicago, and we had nearly two weeks of a rest before the meeting here began. I had a chance to see what the other horses in my race were doing. From all I could learn Troubadour was the only one I feared, and so on the night before the race I went into the Sherman House, where the pool selling was being done, and bought one ticket on Troubadour, paying \$8 in \$38 for it. My idea was that before the race was over Troubadour would be selling at much higher figures, and the public had made Thomas such a favorite, he selling over the entire field, that I did not deem it safe to put my money on him.

The race was begun on the first day of the meeting, Saturday, July 25th, being called rather late in the afternoon. The purse was \$1,500, with \$500 extra to the winner of the fastest heat, if trotted better than 2:21. In all his Michigan races Thomas had not trotted the first heat well, but this time he went away rather better than usual, and although Troubadour led me a length to the three-quarter pole, I closed the gap coming down the homestretch, and was only beaten a neck in 2:20. Then the race was postponed until the following Monday. Thomas had gone the first heat so well that I thought he would repeat the performance on Monday, and so did not give him a fast mile Sunday, although it was afterwards clear to me that this was a mistake. When he came out Monday afternoon to continue the race Thomas began acting badly, and when the word was given he made two breaks before reaching the quarter pole. This put him so far behind that I saw there was no chance of winning the heat, and laid my horse up. Annie W, who was in the race, had been well supported in the pools, and as there had been a great deal of talk about her great speed I supposed she would give Troubadour a hot fight for the heat. But, instead of this, she never got near him in the mile, he winning handily in 2:25, which was a very easy heat for him.

In the third heat Thomas acted like himself again, and I knew that the horse that beat him would have to go a lively mile. Troubadour was the quickest to get away from the wire, and led me a length at the quarter pole, but by the time half the mile had been trotted we were on pretty nearly even terms. Around the third turn Troubadour got away from me a little again, Thomas being on the outside. Com-

ing down the homestretch I went at Thomas pretty strongly, but in spite of all my efforts Troubadour had a length the best of it at the distance stand, and seemed to be out-trotting my horse. He made a break at that point, however, and ran all the way to the wire, so that the judges gave the heat to Thomas in 2:18, which was the fastest mile he ever trotted, and also entitled him to the \$500 extra money, unless the time of this heat should be beaten by some other horse, which I did not think was very probable.

The race had been a great betting one, and the men who had backed Troubadour for the money were well posted on trotting. I have been told that Budd Doble, who was interested in the success of the black horse, held a consultation with Dustin, who was driving him, after this heat had been won by Thomas, and that a change of programme was decided upon, it being agreed that in the fourth heat Troubadour should trail Thomas until well into the homestretch, and make his race from that point to the wire. This plan was carried out, Thomas leading for more than seven-eighths of a mile, when Troubadour came along and beat him in 2:23. It was a peculiarity of Thomas that he would never do anything like his best when in front of the other horses in a race. He would not go up against the bit, and had to be driven all the time; but when head-and-head with another horse, or a little behind, he would be as steady as a clock and do his very best. My better plan in driving this heat would have been to have stayed behind Troubadour, although there is no certainty that this would have altered the result. As it was, my horse got \$875 out of the race to Troubadour's \$750, the extra \$500 for trotting the fastest heat making the difference.

My next race with Thomas was at Buffalo, where Edwin Thorne, Kate Sprague, Pilot R and Jewett were the other starters. I won the first heat with Thomas in 2:22, and in the second made a dead heat with Thorne in 2:20. The third heat I won in 2:21, but then Thorne went on and captured the race in 2:21, 2:23, 2:21, 2:19. At Rochester, the following week, the same field, with the exception of Jewett, started. Thomas won the first heat in 2:20; Kate Sprague the second and third in 2:18, 2:23, and then Edwin Thorne came along and took the next three in 2:20, 2:19, 2:25. In this race Thomas was first or second in every heat but one, and at its close I gave up the horse.—*Peter V. Johnson in the Breeder's Gazette.*

Prospectus Petaluma Colt Stakes.

The directors of the Sonoma and Marin Agricultural Association are contemplating the inauguration of a series of trotting colt stakes on a grand scale.

The proposition is to make the races open to all colts and fillies of one, two, and three years old in the United States, to be given annually at Petaluma during the week of their fair with an entrance fee of \$10 in each stake.

Nominations to be made with the Secretary of the Association and closed annually on the first day of January preceding each fair. An installment fee of \$10 to be paid on the 15th of April thereafter, one of \$10 on the 1st of July following, and one of \$20 on the day of the race, before starting. Any subscriber who shall fail to pay his installments, when due, forfeits all previous payments. To the three stakes the association propose adding \$1,000 each, which, together with all sums received (as forfeits and fees) in each stake, is to be divided into two main parts, or classes, of 4-5 in the first class, and 1-5 in the second. The money in the first class is to be so distributed that the four winning horses will receive respectively 8-20ths, 5-20ths, 4-20ths, 3-20ths, of their stake, according to positions at the finish of the race. The second class of winners to receive 4-10ths 3-10ths, 2-10ths and 1-10th of their stake respectively as they may stand at the conclusion of their race. Thus it may be seen, that if each main stake should amount to \$2,500 (which is claimed to be a low estimate) the first class would get \$2,000, of which the first horse in that class would receive \$800, second, \$500, third, \$400, and the fourth \$300. In the second class of the same stake, the first horse would receive \$200, second \$150, third \$100, and the fourth \$50, virtually making eight graded prizes in each main stake. The first class of starters in each to be composed of the six fastest foals, and the second class to consist of the six next fastest of the same age, thus making two independent final contests in each stake. The yearlings to trot a dash of one mile. Two-year-olds, heats of a mile, two in three. Three-year-olds to trot mile heats, three in five. The classification, and trials for positions in the different stakes, to be determined and governed by authority of the Sonoma and Marin Agricultural Association. All else, (not otherwise provided) to be governed by rules of the National Turf Association.

The Track in Australia.

The Victoria Trotting Club will "hold high holiday" on Wednesday afternoon, on their beautiful Elsternwick track, and a large portion of the many thousands of horse visitors now in Melbourne, as well as of our own metropolitan sports, are sure to put in an appearance. The programme provided is well diversified, and possesses considerable interest, there being a purse at one-mile heats, best three in five, and another at two mile heats, best two in three, besides a four miles match for £200, between those well-known public performers, Wanderer and Brown Hawk. For the club events, although the number of starters is limited, this does not so much matter in trotting as in galloping; nor, indeed, is it often—even in the home of this particular race, the United States—that a larger field faces the scratch than the number of entries promises on the present occasion. Moreover, in the "Free for All" Purse, those who may never have had an opportunity of witnessing the speed gait of American trotters, will now get a chance to see the already proved Commodore and Startle meet the just arrived Oliver and the unknown Red Star; and as all of these will be driven true Yankee style, in skeleton sulkies, and by skilled handlers of the reins; the contrast of the contest with that of the previous day's Melbourne's Cup will prove most marked. There will be plenty of trains, at the cheapest of fares, from the Hobson's Bay station, and the exceedingly well arranged course is only a step from the Elsternwick platform. If to-morrow does not result in being "a red-letter day" for the V. T. C., then will merit not receive its due reward.—*The Sportsman, Melbourne, Oct. 30th.*

NATIONAL TROTTING ASSOCIATION, DISTRICT BOARD No. 5, December 4, A. D. 1882.—The meeting of this Board called upon the written request of J. McM. Shafter adjourned from November 27th, A. D. 1882, to this day. The protest of Joseph Cairn Simpson to the colt Dawn, and the protest to the filly Mocking Bird, are severally overruled, and the decisions of the judges of the race as to said protests are in all respects affirmed. N. T. SMITH, President, and J. McM. SHAFTER, Member said Board.

Queer Laws.

The following which is copied from the *Referee* (London, England) of Nov. 12th shows what singular fancies the average legislator indulges in regard to betting. Some fanatic—it may be a fool—obtains a position where he has a voice in making laws. He is sure to run into some crotchets or other, and with others to support him, not so foolish or fanatical perhaps, but having a dread of running counter to the opinions of the “unco gude” laws as absurd as can be are placed upon the statute book. We have little faith in legislation when that is directed to compelling men to take the narrow grooves the bigots desire. So long as a man is a good citizen, in the generally accepted meaning of the term, we are willing that he should follow his own bent. As Jefferson so well expressed it “any man who is a good citizen, a good neighbor, good in his family relations, upright and honest in his dealings, he cannot have a bad religion.” That view is gaining ground all over the civilized world, and as that becomes established, the spirit that led to the adoption of the “blue laws” will grow weaker:

The betting prosecution at Manchester, from which so much was expected one way or another, ended in a direct compromise. Mr. C. Russell, Q. C., M. P., who is popularly supposed to be the only member of the inner bar who knows anything about sport, was secured by the racecourse company, which undertook not only the defense of itself, but that of the incriminated bookmakers; and Mr. C. Russell, Q. C., M. P., suggested a course which received the full concurrence of the Salford bench of magistrates. The difference between tweedledum and tweedledee, even in matters of law, was never shown to greater advantage, or disadvantage, than by means of Mr. Russell's suggestion. Several times since the Act of 1853 was passed, it has been decided that the use of a stool, a hutch, or a box, the carrying of an umbrella, or the doing of anything which attracted special public attention to the user, carrier, or doer, constituted “a place” within the meaning of the Act; and that, therefore, the delinquent was punishable under its covenants and clauses. But where men who have not thus attracted public attention have betted, no matter whether they betted more or betted less than the users of stools, hutches, or boxes, or the carriers of umbrellas, they have been ruled outside the Act, and have escaped fine and imprisonment. This position of affairs formed the keystone of Mr. Russell's operations. He suggested that the Manchester Racecourse Company should admit the error of the men who rigged up stands on the course, or brought them there ready-made; throw themselves on the mercy of the Court, and crave forgiveness. But with regard to men who simply stood upon permanent steps not intended for purposes of betting, Mr. Russell submitted that their case was entirely different. The steps were constructed as steps, and as steps only, and not as a betting resort or “place,” and their temporary use by betting men did not bring them within the purview of Sir Alexander Cockburn's Act. Therefore, those who simply betted upon the steps and did not use artificial means to attract observation were as innocent as babies. The prosecution having fallen in with this view, and the bench having concurred, nominal fines were inflicted upon two of the admittedly guilty wretches, and there the case ended, as the representatives of the Watch Committee said, for the present, at all events. The Watch Committee is doubtless satisfied; it has certainly proved its possession of power. Besides what it has done, the committee remains complete master of the field, as the summonses against the betting men who stood upon the steps were not withdrawn or dismissed, but simply adjourned sine die, so that in the event of any other annoyance on their part, proceedings can go on without having to be begun at the beginning.

Thus it will be seen that, in accordance with the administration of the Act of 1853 and its amendments and additions, minor sinners are once more the victims. Fortunately for them, they do not suffer in pocket this time as they have suffered before, owing to the generosity of the racecourse company; but the principle remains the same nevertheless. They will be allowed to go on committing the identical offense for which they have been convicted—so long as they commit it in a slightly different manner. It is fair to presume that when the law against ready-money betting was first established, the intention was to put down ready-money betting of all kinds and descriptions. Even then the law would have been sufficiently iniquitous, seeing that special exemption was made for a kind of betting which is infinitely more immoral and destructive than ready-money betting. But such moderation was found unpalatable to those who make our laws and those who interpret them; and now we find one man allowed to bet as much as he likes, and stake the money beforehand, while another cannot even talk about such a hideous crime without being at once hauled before the magistrates.

An idea is prevalent among people who do not frequent racecourses, and yet who take an interest in what happens upon them, that all betting done inside the ring is done upon the Tattersall's, or credit principle. They hear of betting men being convicted for betting outside, and outside betting means in their minds ready-money betting; while inside betting is to them betting “on the nod,” which is entirely above the ken of the lynx-eyed policeman, or whatsoever other person may be selected to mark down delinquents. As a matter of fact, the betting inside the rings is, as a rule, ready-money betting. For one who is sufficiently good, and known to be good, to obtain credit, there are always twenty who are almost unknown to the bookmakers, and who therefore deposit their money before the race, and, if successful, receive their winnings directly afterwards. Often enough, gentlemen who only bet from five to ten pounds at a time, and who could receive credit if they so desired it, prefer to pay as they go; sometimes because of the belief that if they were to bet “on the nod” they might lose hundreds where tens now satisfy them; sometimes because they like each race to stand by itself, and because they have no idea of making betting anything other than a mere passing amusement. Not only is this the case inside the ring; also inside it you may find men at every important meeting who do not use stools or hutches or boxes, or carry umbrellas, in the iniquitous way forbidden by Parliament and the judges, but who manage to dress themselves up so as to attract observation, and with observation increased custom.

What I can't understand is, that if it is wrong for a man to stand upon a piece of wood which raises him six inches above his fellows, or to carry a gaudy umbrella, how can it be right for him to get himself up in a costume of most extraordinary character—of such a character as causes him to be looked at twenty times as much as he would be looked at if dressed in ordinary garb and standing on the tallest pedestal or carrying the largest and gaudiest umbrella obtainable? The whole business is a muddle, and sorely requires reformation.

At Newmarket, the headquarters of the turf, which is protected and cherished by a body of noblemen and gentlemen who hold absolute sway over racing and all that belongs to it, who are of the class which first caused the exemption of credit betting, an arrangement has been made by means of which ready-money betting is permitted, providing the layers pay the regulation fees for the ring, and do not attempt to defraud the proprietors of their dues and imposts. This in itself shows the current belief among people who know nothing of racing but what they read in the papers, that within the ring credit betting rules supreme, is nonsensical. That ready-money betting is against the law no man would attempt to deny; still, for nearly thirty years men have been convicted or have escaped conviction, not because they have or have not betted with ready money, but because it has been decided that they have or have not made “a place” within the meaning of the Act for the purpose of betting.

AGRICULTURAL PARK, SACRAMENTO, NOV. 30. SUMMARY.

Match race, \$300 a side; quarter mile.
Fred Bridge names s g Frank..... 1
Joe Zuver names ch m Kitty Woods..... 2
Time—0:24½.

SUMMARY.

Same day.
Purse and added stakes, \$250; mile heats, three in five; for pacers.

Answers to Correspondents.

SACRAMENTO, Dec. 3, 1882.

EDITOR BREEDER AND SPORTSMAN, *Dear Sir:* Will there be a renewal of the Stanford Stakes this year for foals of 1881 to trot as three-year-olds in 1884? If so when does it close and how much is the first installment? Yours truly,

INQUIRER.

Answer—Advertisements will soon appear giving all of the particulars.

Mc L. and H., Horse Shoe Bend, Boise county, I. T.:
Wild Wood, b. c., foaled 1875, bred by John Hall, Alvarado, California, by Woodburn.
First dam Peggy Ringgold, by Ringgold.
Second dam Little Peggy, by Cripple.
Third dam Peggy Stewart, by Cook's Whip.
Fourth dam Mary Bedford, by Duke of Bedford.
Fifth dam by imported Speculator.
Sixth dam by Alexander's Dare Devil mare, by imported Dare Devil.
Seventh dam imported Trumpetta, by Trumpator.
Imported Trumpetta runs back through six generations to Daffodil's dam.

Woodburn, by Lexington, from Heads-I-Say, by imported Glencoe, grandam imported Heads-or-Tails, by Lottery.

A. M. E., Red Bluff.—Although there are diversities of opinion in regard to the question you propose, as to the propriety of “breeding a promising filly at three years of age, and whether it will retard the development?” We are under the impression that no ill results will follow. In some cases there appears to have been a decided advantage. At an early day we will make your query the subject of an article in which will be embodied the results of actual trials. There are instances enough to warrant the conclusion that an early exercise of maternal functions has been an advantage.

LATEST OF ALL SORTS.

Base Ball.

Ward, Welch and O'Neil have been engaged for the next season to pitch for the New York League nine. Ewing and Clapp will catch. The other players will be Reilly first base, Troy second, Hankinson third, Caskins short stop, Dorgan left field. Ward who is well-known in this city was with the Providence club during the season just closed. Sweeny, the pitcher of the Niantics, takes a benefit at the Recreation Grounds to-morrow. He is quite a favorite and a good attendance is expected. The game will be between two picked nines, including the best players of the Reno, Niantic and Haverly clubs.

There is likely to be two or three new amateur clubs in this city next season, and instead of the Oakland Grounds being monopolized by the Olympics, Redingtons and Howards as they now are, the new clubs will claim the same privileges on the grounds which have been accorded by the Olympic Athletic Club to the Redingtons. There is a likelihood that the Olympic Athletic Club will offer a handsome trophy for competition next season and permit all amateur clubs to enter into the contest for it.

Last Thanksgiving Day Messrs. Bogert, Turner and Stewart found a place on the Saucilito shore between Yellow Bluff and the Tide station where they caught 50 pounds of fine tomcod. On Saturday Mr. Denning and Bogert were over the east side of Goat Island and got 75 pounds of rockcod and tomcod. There will be good fishing during the coming week on the east side of Goat Island.

Dr. Protheroe blind-folded with long stockings the twenty-two ostriches at Central Park last Monday and shipped them to the ostrich farm to be established in California. The farm consists of 800 acres in San Bernardino county, and the cost of taking the ostriches thither from New York is \$2,000.

Mr. W. S. Ruddick and Mr. J. M. Heinold, on the 25th of last month, killed 51 ducks, mostly mallards. This fine bag was made in the evening by moonlight near the artesian well at Mount Eden.

The man who loves his poultry stock will generally take good care of them and good care will make them valuable and productive.

The natural traits of the game fowl, their beautiful plumage, proud and majestic carriage, and the proverbial courage are qualities that are much admired.

HERD AND SWINE.

Blood Tells.

If farmers who have not yet imbibed ideas leading towards improvement in their meat producing animals could visit any one of the leading markets, in this or any other country, and witness the close discrimination practiced by buyers, no other evidence would be required to show the utter folly of attempting to force money from customers who are seeking a first rate article, by placing before them stock of low grade. The man who hauls shrunken wheat to market, knows what his reward will be, because close grading and no latitude is the rule with wheat. The same careful discrimination is placed upon all other products of the farm—fruit, vegetables, poultry, wools—and especially in dairy products are the lines drawn very closely.

There is a sharp, well defined meaning in the lesson to be gleaned from prices on butter, when the quotations show the unwarrantable range from thirty-three down to eight cents. The lesson is equally sharp and well defined when the quotations on steers vary from seven down to two and a quarter cents. The spectacle of a two and a quarter cent steer eating the grass off of land worth \$50 an acre, and corn worth, in the crib, fifty cents a bushel, affords a sad commentary on the judgment of the farmer who tolerates such a practice. Yet, an approximation to this is the rules on many farms. For every car load that commands six to seven cents, there are twenty car loads, no one of which will go about five cents, a large proportion going below this figure.

After looking the contents of the pen carefully over, we invite a look among the quarters hung up in any wholesale slaughtering establishment, where several different grades of steers are killed and kept for sale to retail butchers. On two quarters hanging side by side, which, to a novice, may seem of equal value, there is often a difference of from three to four cents a pound. Follow these two grades of meat to the retail butchers, and you will find that certain shops always buy the cheaper, and others the higher grades; some, a very few, buy of two grades. Taking Chicago retail shops as examples, if you follow these quarters to the block, you will find the best steaks and roasts from the better grade, are sold at 18 to 22 cents a pound, while similar cuts from the lower grade are sold at 12 to 14.

Consumers, though not one in a thousand of them know that the quality hinges mainly upon the extent to which the lean proportions—in other words, the muscles—have fat distributed through and between their fibers, marbling the meat, have learned that the twenty-cent meat has qualities which the twelve-cent never possessed; hence, those who can afford to pay the larger prices cheerfully permit the butcher to fill their orders at the top prices. This is mainly the channel through which one steer finds a ready buyer at seven cents, while another can only be put off at half the figure. If fifteen-cent butter would prove as palatable on the table as the thirty-five-cent butter, then the lower priced would control the price of the other, and the two would come nearer together. For a like reason, if cuts from the low-priced steer would prove as savory on the table as those from the higher priced, then the disparity in price would be obliterated. Consumers are becoming, every year, better acquainted with these differences, while the great mass of them, through liberal wages received in manufacturing and mechanical pursuits generally, are better able to buy meat than formerly. It is not generally known that improvement in the quality of our meat producing animals received its first strong incentive through the demand which sprang up when so large a portion of the English population became operatives in manufactories, a century ago.—*National Live Stock Journal.*

Butter-Making a Science.

There are very many things in the way of farming which any common greener can do. And just because men are able to dig a hole in the ground with a hoe, drop seed into it and cover the seed, and are able to raise what they are satisfied to call a crop, they think they are farmers. So it is in the dairy business. The cows are driven up and milked, the milk is put away, then skimmed; then comes the churning of the cream, which is followed by the salting and working. The breeding or blood of the cow is not studied; the food she eats is not regarded; the temperature of the milk-house is not looked after; the churn has no thermometer attached, and when the butter is to be worked no thought is given to the probable size of the butter globules or grain, because, as stated, the breeding of the cow is not known, and the butter is worked with about as much care and understanding as the brickmaker would observe in preparing mortar for brick. Many things are necessary to know in butter-making. Milk is a powerful absorbent, and will, therefore, absorb much impurity if uncleanness should be found to exist. The quick tendency of impurities such as belong in milk, as well as those absorbed by it, if allowed to remain in the butter, to become rancid should be well studied. If the cows are all about of the same blood, the butter globules will be about the same size, and when placed in a milk-house where the temperature is about 70 degrees above zero, the cream will rise about the same. After so many hours skim and churn in a churn having as little friction as possible, at a temperature of, say, 62 degrees; the butter will be all right if up to this time the premises have been kept clean. The milk must now be washed out—not worked out, because the very moment the working process is introduced the butter globules are liable to become broken, and a mixture of the oil and the milky portion takes place. Then there is no such thing as separating the objectionable portions from the butter. Salt should never be put into the butter until it is set aside. This is reasonable. Any one will admit in a moment that if salt be thrown into butter and worked before it is dissolved, it being hard as well as sharp edged, it will tend to break the globules or grain of the butter; hence the butter becomes cheesy, and in place of a knife slipping through it like passing through a ripe apple, it pulls through and has the appearance of having been used in cutting lard.—*Rural Spirit.*

The “American Shorthorn Herd Book,” the “American Shorthorn Record,” and the “Ohio Shorthorn Record” have been consolidated as the “Shorthorn Breeders' Herd Book,” under control of the American Association of Shorthorn Breeders, and there is peace in the Shorthorn camp.

The highest price ever paid for an animal on the Island of Jersey is reported to have been given a few days since by Mr. T. S. Cooper, for the cow Khedives Primrose. The rumor is that Mr. C. has bought the cow from Mr. Dorey for \$5,000.

Quite a number of counties have selected delegates to the anti-bull-butter convention, which will evidently be largely attended.

When Doctors Disagree.

Like the scientific breeding of stock other than equine, veterinary science is yet in its infancy, though the rapid strides now being made in that line, especially by the aid of the microscope and other modern appliances, indicate that in a short time the treatment of diseases of animals will be reduced to as exact a science as medical men claim to have achieved in the treatment of human ailments. The scientific investigation into the causes, treatment and effects of diseases of domestic animals is being carried on more systematically and with more satisfactory results in France than in any other country, and the government of that country appropriates a large sum every year for the carrying on of such investigations. Vivisection, however revolting the very idea of it may at first be to those of a refined and sympathetic nature, has resulted in much good, and the pain deliberately imposed on a few animals by experimenters has resulted in the prevention or relieving of pain in many. So much are we indebted to the investigations carried on under the patronage of the French Government that one rarely sees any scientific treatise on any disease of animals without frequent allusions to the investigations of M. Pasteur. But yet, as we have intimated, the science is in its infancy, and "doctors disagree" at every turn. We publish this week an apparently well-digested paper read before the Ontario Veterinary College, in which anthrax, splenic fever, Texas fever and black quarter are expressly ascribed to the *Bacillus Anthracis*. In another column we reprint a scholarly article from the *Breeder's Gazette*, written by D. E. Salmon, D. M. V., the object of which is to convince the public that the *Bacillus Anthracis* is entirely absent in Texas fever. As the writer speaks from his own personal experience and investigation his assertions are worthy of consideration, and, in the absence of any further light, the general verdict will be that the Texas fever is distinct from anthrax. His assertions regarding splenic fever are not as pronounced. The subject is well worthy of careful study, especially as the anthrax proper is liable to attack humans as well as brutes. It is but a short time since the Indians of Carson valley were reported to be dying off of this disease, having contracted it by eating the carcasses of cattle which had died of blackleg, as the affection was called in that instance.

The Supply of Hogs.

We think that neither the bulls nor the bears, with all their agencies or guesses, can deceive the public as to the great deficiency in the supply of hogs for the fall and winter market. The great scarcity and high price of corn in the corn belt for twelve months has caused farmers and feeders to hurry to market all hogs which could be passed off. And there has been a great reduction of the number of hogs kept for breeding. This has been the case in nearly all of the hog-producing regions of the United States, so the deficiency will be at least thirty per cent. below last or three previous years. This will make a material difference in the supply and demand. If all the packers do not combine and establish prices, the farmers may expect at least no decline in prices from the present. Corn last week, owing to the reliable reports of the crops, advanced largely in spite of all the bears could do. And there is scarcely a possibility that the deficiency in hogs can be made up in the next sixteen months. The breeding hogs and corn to feed are not in the country and farmers can rely on good prices for the next fall's hogs, if the business of the country is not controlled by an unholy combination. And with the facts so apparent it does not seem possible that any perversion of facts can possibly deceive anyone. And if all the packers meet as they usually do, and determine on low figures, it seems there ought to be an appeal to Caesar with all of the vim which man has for self-defense.

The above from the *Iowa State Register* is undoubtedly the condition of the supply of hogs and corn. We are entirely at the mercy of the packers. If they see fit to meet and fix prices as they undoubtedly have done, there is no redress only for farmers to unite and slaughter their own hogs and await the time for further advances. We have in the larger cities a set of the most unprincipled swindlers and gamblers that ever infested civilized society. They are the curse of the age in which we live. The laws of supply and demand have nothing to do in fixing prices. It is all governed by a set of men whose only aim is to take advantage of the necessities of the people. It seems as if combinations now control most of our products; wheat is forced way up and down without cause. The lumber trade is governed by a combination of lumbermen and no one can now get a carload without paying the regular dealer at home his commission. In fact almost everything now is controlled by combinations. How long will our people submit, is the leading question now to be solved.—*Clipper*.

DRY MURRAIN, SO CALLED.—Impaction of the manifold or third stomach of cattle, generally due to exclusive feeding on dry, coarse and fibrous food and insufficient drinking water, frequently proves fatal, if not energetically treated on the appearance of the first symptoms of disease. Dissolve an ounce each of common soda and Barbadoes aloes in half a pint of hot water, and add to this solution an ounce of oil of turpentine; also dissolve one pound of Glauber's salts in half a gallon of hot water; then mix these solutions together, and give it in one dose to cattle over a year and a half old; half such a dose to cattle from eight months to a year and a half; and a third of the quantity named to younger ones. Repeat the doses named every six hours, and at every intervening hour give half a gallon of flaxseed tea with an ounce of ground ginger; or, instead of the flaxseed tea, give a pint of raw linseed oil or molasses every intervening hour. Inject, as often, blood-warm soap-suds or salt water per rectum. Give walking exercise. After recovery give steamed, cooked or ground feed, among which, during a few days, mix a handful of ground willow bark.—*Breeder's Gazette*.

Goats' milk is sold in London at thirty-seven to fifty cents per quart. It is preferred by many for the food of very young children. English and Welsh cottagers find the keeping of goats for their milk a profitable business at the prices paid. The yield is generally very small; but a goat picks its own living with less expense to its owner than any other animal.

Cattle-raising, as well as manufacturing, is looking up in the South. The Agricultural College of Mississippi has lately had its agent among the Galloway herds of Michigan looking for some breeding cattle.

California has one-tenth of the sheep in the United States.

ANTHRAX IN CATTLE.

Paper Read by H. B. Adair in the Ontario Veterinary College, Toronto.

Anthrax is one of the oldest known diseases, as well as the most virulent, no portion of the globe appearing to be exempt from it in one or more of its manifold forms, though warm countries and those where there is much marshy land, or the soil is tenacious of moisture, are the most subject to its ravages; its fatality has materially diminished where proper drainage and cultivation of the land have been adopted.

All animals are liable to become affected with this disease, man as well as beast; birds and fish are only subject to it under certain conditions. It is in herbivorous animals, however, that it appears to have a predisposition to develop chiefly, though others are equally susceptible when placed under suitable conditions for the reception of the poison. Whether the disease is manifested by the formation of a pustule or not, there are certain characteristics by which it is recognized; such as special alterations in the blood, which has a tendency to exude through the vessels, a very dark color, the formation of a feeble clot, a peculiar smell, and the presence in it of certain organisms termed bacteria, the germs of the disease; tumors in the spleen or a discolored and disorganized state of this organ are constant symptoms; so also is the sudden development of tumors, leading on to abscesses or gangrene.

Anthrax manifests itself in many different forms and is known by as many different names such as Charbon, etc., in the horse; Red-water, Splenic fever, Texas fever, Black Quarter, Gloss Anthrax, etc., in cattle.

In the horse I have never seen a case, but understand that it has prevailed to some extent in the Southern States in a sporadic form. The symptoms manifested are sudden sickness, and the access of the disease is marked by a well developed febrile condition. The animal affected becomes comatose; there is great prostration, and the animal has a staggering gait. Respiration becomes accelerated, and the pulse, first full, rapidly becomes small and irregular, the motions of the heart strong and bounding, temperature high at first but soon falls, coat dull, hairs of mane and tail easily pulled out, mucous membranes assume a yellow or red color, and are often covered with brown or black petechiae, urine brown or reddish color. The animal evinces colicky pains, bowels constipated, faeces covered with bloody mucus, and a discharge from the nose of an offensive odor. The morbid process continuing, all the symptoms increase, and the animal soon dies. Sometimes he falls and expires immediately, before any symptoms are noticed, or there may be external manifestations or tumors form, as in Black Quarter in cattle.

Red-water in cattle—This form takes its name from the color of the urine; it has prevailed to some extent in central Kentucky the past season, where I saw some cases. The symptoms were dullness, loss of appetite, dry muzzle, redness of conjunctiva, dullness of eyes, black petechial spots on mucous membrane of nostril, respiration somewhat quickened, weakness in hind quarters, twitching of the muscles, in some cases diarrhea but generally constipation, with the faeces tinged with bloody mucus, urine of a cherry red color generally. In some exceptional cases it is black, temperature invariably high in first stages, from 103 deg. to 107 deg. F., pulse very much quickened, 70 to 95 per minute, and very distinct in fever stages. In milch cows secretion ceases entirely, the animal separates from the herd, becomes comatose and dies in from one hour to a week after being first noticed.

Black quarter—This form usually occurs in young animals from six months to two years old, especially those in the most thriving condition; what I have seen of this form was either sporadic or enzootic; the first thing that draws the attention of the herdsman is the death of one of his finest calves, which is followed by a second and sometimes even the whole lot will die in a single day; those that are subject to this form thrive with rapidity until they attain a high state of plethora, when some of them perhaps become lame, a swelling commences in some part of the body, generally about the hock; this is very hot and painful and is often mistaken for an injury, it rapidly extends up the limb, causing considerable tumefaction on first painful, afterward it becomes insensible, and gangrenous, cold, and crepitates on pressure, in consequence of accumulation of gases in the subcutaneous areolar tissue as a result of decomposition; when cut into it is found to be produced also by accumulation of putrid, sanious, and yellow gelatinous material underneath the skin and between the muscles of the part, also patches of black pulpy substances may be observed in various parts of the tumor; constitutional symptoms run high at this stage, the animal rapidly loses strength, maintains the recumbent position, becomes tympanitic and comatose; death may even take place in a few hours after the first manifestations of lameness or the patient may rally, the tumors slough and possibly recover. In splenic fever or Texas fever, commonly known by the latter name because of its ravages when Texas cattle come north, the germs, I think, never leave the Texas steer, and when under exciting causes they become active and produce the disease in an acute form death is the result.

Symptoms—Nervous excitement, muzzle dry and hot, membrane first congested, afterward becomes pale, temperature elevated, urine of high color and voided often, weakness of hind parts, shivering and either stupor or great excitement, the ears and legs become cold, tongue discolored, grinding of the teeth, foaming at the mouth, diarrhea with abdominal pain and finally convulsions and death by necremia.

Lesions—One of the most noticeable is a tendency to rapid decomposition; early distention of the body with gas, rectum everted and of a deep red color; fetid discharges from the natural openings are very common. The blood is of a very dark color, does not coagulate, or if so, the clot has a peculiar sickening smell, it is usual to find bloody tumors in different parts of the body. The respiratory organs are generally normal. Spleen is invariably altered. The intestines are more or less congested, the liver enlarged, and the presence in the blood and other fluids of bacteria, the specific germ of this disease in whatever form it may manifest itself. If the disease has been of any duration the membranes will present a blanched, or bloody appearance.

Causes have been variously disputed until late investigations have thrown much light on the subject; as science advanced, and the microscope was brought in to assist the researches of observers the influence of pastures and forage affected with parasitic organisms was recognized. Their minuteness, however, and the difficulty of determining the exact agents and their modes of introduction into the animal economy, left the whole matter in a state of doubt and speculation. Until recently it was thought that these diseases arose from too rich a diet, by which means the blood was so charged with nutritive matter that the digestive functions became impaired, and a septic action set up in that fluid. It

is now known, however, that these changes are entirely due to the presence in the blood of a parasitic organism termed the *Bacillus Anthracis*, which, acting upon the organic constituents of the blood, impairs and destroys its vitality.

These parasites are either minute "rods or filaments, or spheroid bodies," which are found in the blood of animals which have died of anthrax. They break up or resolve themselves into roundish bodies termed "spores," which retain their vitality for long periods outside the body, but are rapidly and indefinitely multiplied while in the system.

When an animal dies, and the fluid and excrements are left on the ground, the spores either sink into it and remain there or become washed away or removed to other places by the rain or other natural causes; thus we can account for the prevalence of this disease in low-lying places. When animals are buried the earth worms bring up the germs in their casts, and as they cling to the roots and stems of the grass and other plants, they are taken into the system in that way, which accounts for its outbreaks in places that have been grazed over for years without disease of any kind being known.

Dry and cold weather prevents the development of the parasites. Wet and warm weather favors their development. And dry and warm weather favors the vitality of the disease. They are introduced into the system through the mediums of the grass, water, etc. There can be no doubt that multitudes of these germs are destroyed by natural agencies, and that western prairie fires have this one redeeming point of aiding in their destruction. The way in which these parasites are distributed and conveyed into the system of animals has been determined by the researches of Professors Pasteur and Toussaint, who have not only proven that they are the sole cause of these diseases, but have succeeded in modifying their virulence so as to be able to produce anthrax in a mild form, thus conferring immunity on animals exposed to contagion.

The treatment of anthrax has been very unsatisfactory, as there is a great tendency to putrefaction. I would advise antiseptics, alteratives and tonics. Isolate all sick animals, change those that are not yet affected to a high pasture away from stagnant water, and give the sick, morning and evening:

Chlorate of Potassa—z ii.

Sulphite of Soda—z iv.

Carbolic Acid—z iss.

To be dissolved in water and mixed in soft food. Those that are not yet affected should have a constant supply of salt and pure water. All dead animals should be buried in their skins, and the yards disinfected with chloride of lime or carbolic acid, and barns with sulphurous fumes, as well as washing with carbolic acid solution.

Origin of Red Hogs.

In a former article I spoke of the assumptions of breeders who claim that only their hogs are pure-bred, as absurd. I illustrated the idea by referring to the Poland-China hogs as an example, showing that there were different families of these hogs, of different breeding and crossing; but that when bred to a certain fixed standard of characteristics, and uniform in their breeding, they might be classed as thoroughbred. Suppose that one of the breeders of Poland-Chinas should assume that his family of hogs were the only ones pure bred, and all others were not genuine, would he not occupy a position to invite criticism, if not of distrust? I have before me a catalogue of Mr. Clark Pettit, of New Jersey, which says: "The genuine 'improved Jersey Red swine' are descended from stock imported into Salem Co., N. J., from Europe at least forty years ago." Among the characteristics mentioned are "fine red hair and fine symmetrical legs." One thing at a time; first, the origin. How should this young man know all about the origin of Jersey Reds, when David Pettit, of Salem, N. J., a gentleman advanced in years, and one of the most intelligent farmers in the state (Clark's father, I believe), wrote me in 1872 that he could not give the origin of the Red hogs in New Jersey, but he had known of them for thirty years. D. M. Brown, of Windsor, N. J., wrote me at the same time that he had known of them for nearly fifty years, but he did not know how or where they originated. He described them as very long in the body, strong bones, coarse hair and growing to an enormous size. Other persons living in New Jersey, with whom I conversed at this time, gave the same testimony as Mr. Brown. Mr. Clark Pettit endeavors to convey the impression that his Jersey Reds are descended in a direct lineage from imported Jersey Reds from Europe, and that this lineage or descent can be traced for forty years. I have no objections to Mr. Pettit claiming that his Jersey Reds are better than any other; but I do object to his boastful claims of special purity of blood, except only as he may have or shall establish it by breeding; because I insist that older and perhaps wiser men than he, in his own State, who were disinterested, owned that they did not know the origin of these hogs. I do not know the origin, but I believe they are an offshoot of the old-fashioned Berkshires; or, in other language, they are descended from the early importations of Berkshires. Authentic history establishes the fact that red was a common color in Berkshires, and it still crops out in the purest and best-bred families of the breed.

A few years ago, Wm. Crozier, a celebrated breeder at Northport, Long Island, N. Y., imported a number of Berkshires, and at the New York State Fair he generously gave me the choice of a boar pig out of a litter of nine, which were farrowed by one of his imported sows. I got A. B. Allen, the best authority on Berkshires in this country, to select the boar; and he picked out a rich plum-colored pig as his choice, remarking that "this indicated purity of blood." Why? Because it proved a direct lineage with the foundation stock in the shire or county of Berk. Mr. Pettit does not give the name of the breed imported, but leaves it to be understood that the hogs imported were Jersey Reds. Neither does he tell us the country. "From Europe" is rather indefinite.

The truth is, the Jersey reds were only one of the various families of red hogs in this country. They had been crossed for years with other hogs, but latterly with Chester Whites, and these cross-bred hogs, usually red-and-white, but often all red, were really famous for growth and size. I never heard of the name Jersey Reds until I heard it used by the late J. E. Lyman, formerly agricultural editor of the *New York Tribune*. Mr. Lyman, who lived in New Jersey at the time, was unable to obtain the origin. I do not know when the name was first given to this family of hogs, but I do know that it was first introduced into agricultural literature through my report on them made in 1872 to the National Swine Breeders' Convention. Mr. Lippincott, of New Jersey, was the first man to advertise them under this name, in the *Country Gentleman*, if I mistake not; and he was followed soon after by a Mr. Collins. These gentlemen made no pretensions to an imported lineage.

I think my report alluded to is nearest the truth, when I say "the positive origin of this family of swine is unknown."

It further says, under the head of characteristics, "a good specimen of a Jersey Red should be red in color, with a snout of moderate length, large lop ears, small head in proportion to the length and size of the body. They should be long in the body, standing high and rangy on their legs. Bone coarse, hairy tail and neck, and hair long, inclining to bristles on the back. They are valuable on account of their size and strong constitutions and especially for growth. They are not subject to mange." In my next article I will endeavor to give the history of the other families of red hogs, as far as it is known, and a description of them. The name Jersey Red is simply a local one, and Maryland Reds would have been just as appropriate, as the same kind of hogs were bred in that State. I recollect seeing a sow, a good specimen of the red family of hogs, with a large litter of pigs, some of them red and others red-and-white, in war time feeding along Pennsylvania avenue. These hogs were quite common at that time, 1862 and 1863, about Washington. They undoubtedly had the same origin as the hogs in Jersey, viz., from the early importations of Berkshire, which they resembled in form and characteristics.—Col. Curtis in the *Breeder's Gazette*.

Fattening Hogs in Large Numbers.

The attempt to fatten hogs in large numbers under one management is not so frequently made now as formerly. The general belief seems to be that they cannot be made to thrive when many are kept and fed together.

Wholesome feed, and that in variety, with good air and cleanliness, are well known to be prime essentials to success in the handling of hogs. How to secure these with large herds, and at a cost which will leave a fair margin of profit, is a matter of interest to every one concerned in supplying the ever ready demand for fat hogs and pork products. At present prices the temptation to engage extensively in rearing and feeding hogs would with most farmers be irresistible could they but feel insured against the heavy losses from disease and death which almost invariably occur in large herds.

The practical experience of Messrs. Day Bros. of Sangamon county, Ill., on this subject may be worth relating.

During the past summer and early fall they bought up hundreds of hogs and shoats from within a circuit of twenty miles or less of their farm near Springfield. The most of their purchase were thin in flesh; in fact, many were what are usually termed mere shadows. Since the latter part of August they have been putting the feed into these hogs with a view to fattening them for the Chicago market. They have made a number of shipments to the present time, and now have on hand about 875 head, ranging in weight from 180 to 300 pounds each. These are all allowed to run together in a lot of about four acres, once covered with timber but now mostly cut off, leaving out trees enough for shade, etc., and yet sufficiently open to admit sunshine and a free circulation of air. They are fed on the ground with ear corn, sometimes old—that is, of last year—and sometimes new, jerked from the field with half the husks still on. Many of these husks are afterwards collected by the hogs at different places, usually under the trees, and used by them for bedding. To prevent these beds becoming foul, a one-horse rake is driven through the ground every day to collect the cobs and husks, and these are then burned on the bedding places with the husks gathered there by the hogs. The smoke and ashes, as well as the charred cobs made by these burnings, are believed to be conducive to the health of the lusty porkers. They certainly tend to prevent the accumulation of vermin and to promote cleanliness.

Besides the corn fed to the hogs they have access at all times to well-supplied swill troughs. The lines of goers and comers to and from these are kept up almost constantly. Even during the night they are visited by many that are too shy to come by day. The swill is made of rye-meal chiefly. To about 1,500 weight of rye-meal is added 100 weight of oil-meal, and the whole made into swill, in large tanks, with cold water, and allowed to become slightly sour before being fed. Arrangements are now in progress for using hot water and steaming the meal. This, it is thought, will be an improvement as cold weather comes on.

The troughs from which the swill is fed are arranged with slats on each side, the lower ends being nailed to the upper edge of the trough and the upper ends to a long strip running the length of the trough, about fourteen inches above and directly over the middle. These slats are not placed opposite to each other, but are made to alternate. In this way no two hogs can face each other when feeding from opposite sides. This arrangement of the slats seems to completely prevent the hogs from getting into the troughs with their feet, and also to afford each a fair chance to feed without being crowded by his neighbor.

In addition to the corn and swill given them these hogs are turned into a meadow of about 100 acres early every morning, where they are allowed to remain until about 10 a. m. Here they get another change of feed, and such exercise as seems needful for them.

A more healthy and well-doing lot of hogs than these one seldom sees. They are picked over from time to time, and such taken out for shipment as are deemed at their best. They usually average, when shipped, about 235 pounds each, in car-load lots. As ripe hogs are taken out others are being put in. When new ones are bought they are kept in a separate inclosure for about two weeks before being turned in with the large herd. This is done as a precaution against the introduction of disease from outside herds.

Most of the hogs here are black, or nearly so. The proprietors are very decided in their preference for Berkshires and their crosses. They find them to fatten and round up more evenly than any others. Essex, they say, are too small, and Poland-Chinas are too coarse. White hogs they disparage altogether, although a few—perhaps two per cent.—may be found among those being fed.

The management here described seems to supply all the needed conditions to success. It is practicable, and apparently as economical as any that could be devised. The remarkably fine weather for the past two months has rendered needless all expense for shelter. Besides the saving in this respect, the excellent health and thrift of the hogs has, no doubt, been largely due to their freedom from the restraints and evils almost unavoidable when they are housed in bad weather.—Phil. Thrifton.

Australia has 80,000,000 sheep, against 36,000,000 in this country. The wool yield of Australian sheep has been very light; but the improvements made by importing American breeding stock are rapidly bringing it up. Some fine wool breeders have shipped rams to Australia at \$100 to \$500 per head, and the crosses from these fully double the original wool clip per sheep.

The blood of animals of an herbivorous nature that have been acclimatized in elevated regions has been found by M. P. Bert to be richer in oxygen than the blood of the similar animals inhabiting lands near the level of the sea.

Texas Fever and Anthrax.

The gentleman who is giving the readers of the New York *Times* some lessons concerning Texas fever, and who hides his identity under a double asterisk, is not altogether satisfied with our criticisms in a recent number of the *Gazette*. "The statement in the *Times*," says this writer, "is not only absolutely true, as can be proved by the statements of Dr. Salmon himself, but, moreover, it was calculated and intended to exert the very effect of preventing the encroachment of this dreaded disease upon new territory, by putting farmers on their guard against it."

When I made the "sweeping and serious charge" that newspapers and veterinarians were working together to deceive, I did not add that they were engaged in any conspiracy, or that they were intentionally doing this great injury to our country. My criticisms were not aimed against the intentions, but against the actual results of teachings which directed farmers to take precautions that could have but little if any effect, while their attention was drawn away from the measures which could alone give relief. I would also like to say in this place that the veterinarians referred to are simply individuals who represent the profession only in their own imaginations; there can be no criticism aimed at the profession as a whole, which is as anxious for sound opinions on this question as any of us are.

The writer in the *Times* says: "Texan fever is a delusive misnomer, for the disease prevails all along the Gulf coast, from Florida to Texas, and occasionally occurs in the North from natural causes. It is known in Europe and England, and as splenic fever is included among the so-called anthrax diseases. Anthrax is not a specific name, nor one that in itself indicates any specific disease. It is the Greek word for coal or charcoal, and is used because the distinguishing feature of anthrax diseases is a carbonizing of the blood and the appearance of black or gangrenous lesions upon or in certain tissues or organs. The most pronounced of the anthrax diseases is 'black quarter,' the *Charbon* of the French; and this disease is marked not only by the black disorganized tissue under the skin on the shoulder or flank in many cases, but also by the enlarged, disorganized and black spleen. This latter is the most marked effect of splenic fever, the so-called Texan fever."

[Splenic fever is a name applied to our Southern cattle fever by Prof. Gamgee, "for the reason that the disease is readily distinguished, as a rule, by the enlargement of the spleen." The study of this disease, he goes on to say, "has revealed characteristics hitherto unknown or undescribed in relation to any disease of man or animals." But to leave no doubt as to his opinion on this subject, he adds: "However warm the weather may be, cattle affected with splenic fever have not developed in their systems any poison like the anthrax poison; and the flesh, blood and other tissues of animals are incapable of inducing any disease in man or animals."

Prof. Gamgee is a European veterinarian of excellent reputation, perfectly familiar with the different forms of anthrax which occur in Europe, and, of course, with their form of splenic fever; and yet he tells us that the characteristics of Texas fever were hitherto undescribed in relation to any disease of man or animals, and that our cattle developed no poison like anthrax poison, and that their flesh and blood were incapable of transmitting the disease to either men or animals. Prof. Gamgee, it is not to be forgotten, is one of the very few veterinarians who have made a careful study of Texas fever.

The only other veterinarian besides myself who has made anything like a scientific investigation of this disease is Prof. Law. You have only to turn to that excellent little compendium of his, "The Farmer's Veterinary Adviser," to see how widely he separates these two diseases. It is true that a century or two ago anthrax was not a specific name, and did not indicate any specific disease, but it is a great mistake to suppose that to be the case to-day. When a man speaks of anthrax or charbon he is understood the world over as referring to a specific disease—that caused by the *bacillus anthracis*; for though black quarter may etymologically be the type of the anthrax diseases, it has been separated from them within a few years, and while still spoken of in France as *charbon externe* or *symptomatique*, according to the classification of Chabert, it is well known to be a perfectly distinct disease.

When we speak of anthrax, charbon or the splenic fever of Europe, therefore, we can only refer to the disease caused by the *bacillus anthracis*, and of which the presence of this micro-organism in the blood is the most important distinguishing feature. There is no possible chance for anyone at this day to dodge the fact that the splenic fever of England and of Europe is characterized by this parasite, and that it is a disease communicable to other animals beside the ox, and to man. Very well; has the *bacillus anthracis* ever been found in Texas fever? Has Texas fever, notwithstanding its enormous ravages in this country, ever been communicated to a man, or a sheep, or a hog? No; in the whole history of this disease, there is not one authentic case of its affecting any except bovine animals; and in all the microscopic investigations of Prof. Gamgee, of Dr. Stiles, and of Billings and Curtis, the *bacillus anthracis* was never discovered. And after a longer series of investigations than was made by any of these gentlemen, and with, as I suspect, better facilities for exact scientific work, I am prepared to say that this parasite is not present in Texas fever, and that Prof. Gamgee was right in calling it a distinct and hitherto undescribed disease.

Grounds once infected with anthrax remain infected for years, while, without exception, when Texas fever is carried a considerable distance beyond the permanently infected district, all signs of it disappear with the first freezing weather and it never reappears without a fresh importation.

Texas fever has become so serious a matter in this country that those who are interested in the continued success of our live stock industry can no longer allow teachings so full of danger and harm to go uncontested, and it is for this reason that, after devoting more time to a study of this disease than has been given to it by any other veterinarian, I have assumed the responsibility of saying that some things which have long been considered true of it were entirely false, while other things were true which had not heretofore been suspected. My conclusions are susceptible of demonstration, and when those who contest them have sufficient reputation to justify the proceeding it will be an easy matter for us to meet before a committee of impartial scientific men and make such experiments as will leave no doubt in regard to the truth or falsity of our assertions.—D. E. Salmon, D. M. V., in *Breeder's Gazette*.

Recent purchases for export in Scotland include the five-year-old cow Novice 4191, a daughter of Juryman, bred at Cortachy; the three-year-old cow Fancy of Kelly 4488; the five-year-old Martha 6th 4483, and the two-year-old Ardestie 10th 4771—the three last all bred at Mains of Kelly—were bought for Mr. James J. Hill, president of the St. Paul, Minneapolis, and Manitoba Railway, St. Paul. Along with the cows comes the yearling bull Lord Chancellor 1782, bred at Rothiemay, which won first prize this year at the Royal Northern and Highland Society's shows.

Goat Farming in England.

A unique agricultural experiment is being conducted on the Surrey Hills, says the London *Times*. About seven miles from Dorking, seven miles from Leatherhead, and the same distance from Guildford, has been started a goat dairy farm, devoted exclusively to the supply of goat's milk in large quantities, with subsidiary products of goat's milk, butter and cheese, kids for the butcher, and goat and kid skins for the glove maker and the boot maker. The spot selected is a holding of 210 acres on the earl of Lovelace's property, not far distant from the rabbit farm on the same estate. The soil is a gravelly loam, naturally dry from being recumbent upon the chalk; and the altitude of nearly nine hundred feet above the sea level secures, under the moderate rainfall of Surrey, a climate well suited to the natural habits of these animals of the uplands. If it were not for herds of goats, vast tracts of poor mountain land in Italy and other continental countries would remain entirely unproductive, and although Surrey is so wealthy a residential province, it offers many thousands of acres of common or poorly cultivated land with light sandy soil which might be utilized with advantage for dairy farming by the aid of goats. It is not unlikely that the good work of the Baroness Burdett Coutts, the duke of Wellington, Mr. Holmes S. Pegler, and other members of the British Goat Society, may open a new departure in agriculture. At any rate, here is the first example in a practical shape, begun on a sufficient scale and based upon strictly commercial principles.

Lately visiting the farm in question, we found a herd of 120 milch goats, which is being increased to a proposed stock of 300. A couple of spacious, airy, well-ventilated barns, with asphalted floors, and fitted with continuous feeding-troughs and racks round all sides, form comfortable quarters for the flock at night. Here the goats eat their allowances of hay and their feeds of cake and corn, having access always to lumps of rock salt. They lie upon clean bedding of straw, which is renewed dry and clean with scrupulous care, and there is no trace at all of the unsavory odor popularly attributed to goats. In fact, it is only the male goat which is ever offensive in this way; and the two kept at the farm are tethered and housed in places by themselves. The goats, young and old, appear clean and perfectly healthy; their bright, hairy coats are subjected to curry-combing; no troublesome foot disease demands attention, as in the case of sheep, and any internal ailments are promptly and successfully dealt with by homeopathic medicines, of which the manager, Mr. Farrer, speaks with the greatest confidence and satisfaction. In these houses the goats are milked twice daily, and three times a day for a period after kidding. The goat does not set her feet to be milked from one side, like a cow, but she is fastened by a leather collar round her neck attached to a chain, the milkman, with his head resting on her tail, drawing her full, two-teated udder from behind.

By day the flock is ranging the fields of clover seeds and old pasture, but constantly tended, and kept herded round and out of reach of the quick-set fences, trees and plantations, by two attendants, who, though armed with whips, have seldom occasion to employ these weapons of alarm rather than of punishment. One of the men is a Welsh mountaineer, whose call the goats instantly obey, following in oriental fashion wherever the shepherd leads.

It does not appear that any special difficulty presents itself in the general management. Breeding is arranged so that the greater proportion of the goats drop kids twice in the year, being, moreover, timed to maintain a fixed number in full profit during every month, winter and summer. The yield of milk from each goat may average about two to three pints per day for seven or eight months in the year, and she gives three or four kids, in two kiddings, to be killed at three or six weeks old, as delicate, choice meat, superior to lamb. At present we believe kid meat, equal to fawn, is regularly supplied by only a single butcher at the west end, where it is duly appreciated, and realizes a high price accordingly. The cropping of the farm is planned to supply constant successions of grass for depasturing, straw for litter, and hay and roots for winter keep. What the expense and profit may be remains for experience to prove, but calculation of returns, from the milk sold at 1 shilling 6 pence per quart, shows margin enough for a satisfactory commercial result to the undertaking. If successful, as expected, this example will doubtless be followed in many suitable highland situations within easy transport distance of large towns, where only an available supply of goats' milk is needed to call forth a plentiful demand.

A goat farm has been started by the Express Dairy company (limited) of Bloomsbury mansions, for the purpose of furnishing the London public with a valuable article of nursing and restorative diet, which medical men of the highest eminence are every day recommending for infants and invalid patients, but which is nowhere readily procurable or obtainable at any time for a reasonable price. Next to asses' milk (most difficult to find, except at a very high price, and then extremely limited in the supply) goats' milk approaches in composition most closely to mothers' milk, and its remarkable nutrient and invigorating properties, especially for saving weakly infants and restoring strength to consumptives, are understood in many countries in Europe. Yet, while in many continental cities herds of goats are daily driven through the street, serving fresh milk from house to house, in London goats' milk is to be had only in small and fitful supply, and the price charged is from 2 shillings 6 pence up to 4 shillings a quart. Besides, it has been lately observed by M. Parrot of the Hospital des Enfants Assistés of Paris, that kept in the city, the goat suffers from a diet lacking variety, and that its milk under the circumstances is not so valuable as when the animal is grazed in the country, and hence the importance of a supply of milk from a proper farm instead of from a city yard or mews. The Express Dairy company reckon that a price of 1 shilling 6 pence per quart is sufficient to enable them to retail the milk in bottles of a quart, pint or half pint each, the bottles, of a novel construction, being sealed at the farm, as a guarantee against the possibility of admixture with any milk from cows. Scientific elucidation of the properties of goats' milk points to the circumstance of the cream globules being smaller and more numerous than in cows' milk as accounting for its being more easily digested by young children, and it is to be expected that dyspeptics and others will at least patronize the simple natural product to as large an extent as they now resort to manufactured or imported substitutes.

A Western cattle breeder reports that the greatest profit is made in the first year of an animal's growth. This is increased, but in less proportion, the second year. If kept a year longer not only is there no profit, but all the clear gain of the second year is wasted. This is a striking commentary on the advantage of early maturity.

Four Hereford calves are reported to have been lately sold from the herd of Benj. Hershey, of Muscatine, Ia., for \$3,000.

LOS ANGELES COUNTY FOR HORSE-BREEDING.

To authoritatively give a preference to one county in California over all the others for breeding fine horses is something which we are not yet inclined to do.

There is such a wide range of country in this State so well adapted for the production of the highest type of racehorses and trotters that to those who are acquainted with one of these favored sections it can hardly seem possible that there should be any locality more advantageous.

With the knowledge obtained from nearly nine years' residence in California we are satisfied that no part of the State has superior advantages to those which are found in Los Angeles County for the production of the very highest grade of fine stock. With a climate which is unsurpassable, a soil which cannot be excelled, the purest water and herbage peculiarly well adapted for the dams and offspring, it is manifest that Nature has done her part. That man has accomplished his part, is also evident, and the records of the turf and track will show that for so short a time as horse-breeding has been pursued in that section, the success has been most flattering.

L. J. Rose of Sunny Slope may be termed the pioneer in breeding trotters, although about the same time his neighbor, L. H. Titus, commenced. Hancock M. Johnston, Captain Hutchinson, F. M. Slaughter and others followed, and now there are quite a number engaged in the pursuit. If we are not mistaken it was 1870, when Mr. Rose visited Atwood Place, on his return from Kentucky where he had bought some fillies to place in his Stud. Among them was Gretchen, the dam of Romero, Inca, Sable and Del Sur; Minnehaha, the dam of Beautiful Bells, Mabel, Phaeola, Sweetheart and Eva. Sultana the dam of Sultan, and Barbara, the dam of Len Rose. We cannot recall an instance where so few mares, and in so short a time, have made such a showing. The oldest of them, Gretchen, when purchased by Mr. Rose was only four years old, Minnehaha was two, Sultana a suckling, and the Sire, The Moor, which was to be placed at the head of the stud, three years old.

Mr. Titus brought with him Echo, a son of Rysdyk's Hambletonian, so that in the stables not more than a few hundred yards apart were representatives of the two great trotting families, Hambletonian and Bashaw. We are not informed whether Mr. Titus brought any brood mares with Echo, but we do know that he has been a great success on those of California breeding. Joe Hamilton, Eehora, Gibraltar, Belle Echo, Annie Laurie, Exile and many others well worthy of notice came from the mingling of the blood of the East and the West. It can scarcely be more than eleven years since these two stallions went into the stud, as Gibraltar and Eehora are only ten years, and our recollection is that those were the first of his get in this state.

In 1874 we brought A. W. Richmond here, and in 1876 H. M. Johnson bought him and placed him in the stud. His oldest colts of Los Angeles birth are thus five years old and in the short time he has done enough to take rank with the duo of notables mentioned. But good as The Moor proved to be, his son Sultan has done better. Foaled in 1875 he has two daughters that showed 2:26½ and 2:26 when two years old, and one of them which scored 2:22½ when a three-year-old. He has still another daughter, Neluska, which has the fastest record, 2:30½, in an actual race for two-year-olds, and a son that has phenomenal speed though so unfortunate as to be debarred

from exhibiting it in public. When there is an improvement over both parents it can justly be claimed that there must be climatic advantages as well as skillful breeding and training, and then when the result of ten years is so marked as to show a galaxy like the following there is the strongest proof of all the conditions being favorable. The horses bred in Los Angeles county stand:

Romero—by A. W. Richmond.....	2:19½
Sweetheart, by Sultan (3 years).....	2:22½
Gibraltar, by Echo.....	2:22½
Eehora, by Echo.....	2:23½
Belle Echo, by Echo (4 years).....	2:23½
Del Sur, by The Moor.....	2:24
Tommy Gates, by The Moor.....	2:24
Eva, by Sultan (2 years).....	2:24
Inca, by Woodford Mambrino.....	2:27
Sir Guy, by The Moor.....	2:28½
Beautiful Bells, by The Moor.....	2:29½
Annie Laurie, by Echo (3 years).....	2:30

This list is not given as complete, and in fact it would be difficult to make it so without the assistance of those who are more familiar with the stock of that county. It would be a capitious critic, however, who did not acknowledge the merit which is shown in that list, and an ultra hypercritical questioner who refused to accord praise to the county that gave them birth, and to those who bred and reared them.

The breeding of racehorses to any extent is of still later date than the production of trotters. Mr. Rose had a few thoroughbred mares, though we believe that Irene Harding is the only one he bought on his Eastern trip. H. M. Johnson has also bred a few, but the first to engage in the business on a scale commensurate with the production of trotters were E. J. Baldwin and Captain Hutchinson. The former gentleman is the only one who has bred and trained the progeny, and the few years that have elapsed since the Santa Anita stud was inaugurated have demonstrated that before long the position on the "legitimate" will be as high as the other. Albert C and Lucky B are above the average, and there is no question that Gano ranks with the best of the year, and is entitled to a high place with the cracks of any era.

Seven years ago we visited Los Angeles county and the impression then received that it could not be excelled as a horsebreeding district has never been given up. We copy from a description of the trip a few paragraphs in relation to Sunny Slope, and though it may appear that the colors are rather too bright it will only be to those who have never visited that section of the country.

There are, doubtless, great changes in that length of time, but the pasture fields, with the exception of the fences, were the same as in the days of the padres, and are perfect in natural beauty:

In the early gloaming, when the mountains were still glowing in the bright rays of the setting sun, we strolled with Mr. Rose to the fields in the rear of the cultivated part of the farm. Through the orange trees, by a smaller vineyard, where the choicest varieties of foreign grapes were gathered, up by the stream, walking on top of the old dam, the "centennial" of which has passed, into a field, where the brood mares were running.

Grass up to the ankles. Can it be possible that this is the last day of "gloomy November," when the most favored districts of the East are in slush and snow, and from whence already comes the account of frost twenty degrees below zero; piercing gales and vessels blockaded by ice. The mares are sleek as they nibble the juicy herbage; their coats are fine and their eyes lustrous, and they caper in glee as we approach to take a closer view. No need of barns or close stables here. They can breathe the warm air the whole of the year, and the rain is like an emollient bath.

They career over the field which is perennial in its greenness, for unlike almost any other place in California, springs break from the upper slope and spreading gently over the surface flow the whole of the year, natural irrigation giving life to the plants. We are anxious to get a close look at some of those we so highly admired a few days ago and we follow them to the eastern boundary of the field. We have become accustomed to surprises but here was the most surprising of any we had yet seen.

Beyond was another pasture field, a large field of several hundred acres, the one from which the weanlings were driven up the day of our first visit. From the elevation we could overlook it, and the most famous of the woodland pastures of Kentucky which we ever saw does not equal it in beauty. The thick growth of alfalfa, burr clover and wild oats felt like a thick sod under the foot, a soft carpet which takes away the jar of the gallop as the colts rush past. Dotted over with trees, the symmetrical live oak with rounded top, in the foreground—back, tall sycamores and others of still higher growth. Meadow larks were twittering from the fence rails, robins, blackbirds and the California mockingbird making melody from among the green branches. Immediately back from this field rises the slope which extends to the base of the mountain, and thousands of feet still higher are the jagged peaks. Every fissure, every rock, every gulch is brought out clear in the radiance of the sunlight which now is only shining about a third of the way from the summit, and we can see the shadows moving up, up and enveloping the former bright projection with a neutral tint, a purplish gray something like the early dawn of the morning.

The vesper of bells from the old Mission church, rings the closing of the day, the notes modulated by the distance until the chimes sound like fairy music, as the harmony is faintly echoed from cliff and crag. Had we waited a little longer until the moon's pale crescent was the only light, we are not sure but some of the "wee folks" might have appeared for an elfin dance on the green carpet under the live oaks, nearly as fairy-like a ball-room as that under the Hawthorn on the banks of the Scottish brooklet, where we saw them so many, many long years ago. The recollection is rather indistinct, and shadowy, and it might have been the falling of the white blossoms in the moonlight, but we cer-

tainly thought we saw them at the time, and if there, why not here?

Perhaps even the older days of California, however dramatic like and shadowy, do not go far enough back to insure the "good people" making it their home, and they might be frightened at the frowning mountain apparently so near. But the green dell in the pasture field would surely be to their taste, and they would make a boat of the thick enameled deep green leaves of the orange and float down the stream when the leaves are in bloom, and the perfume of the blossoms fills the air with incense.

It was almost dark when we retraced our steps. The next morning was as beautiful as it was possible to imagine. The sun came up over the mountain, shining brightly; the grass was sparkling with dewdrops, appearing as though a shower of diamonds had fallen and attached themselves to every blade, and the birds' songs were more cheerful than in the evening before; another glance down the avenue bordered with the double row of orange trees, another walk to the barn to look at the colts, and we start for the train which will soon thunder by the old, thick-walled church. Little did its founders think that a hundred years would bring such changes. The next century can scarcely equal them.

SPRING MEETING P. C. B. H. A.

It is time now that the Pacific Coast Blood Horse Association should be arranging the programme for the spring meeting of 1883. Though it may appear premature to commence the preparation for another meeting so soon after the close of that which is just past, it is none too early. Beside the fixed events to be decided at the spring meeting there must be additional stakes, and purses arranged to fill the gap. If we are to have hurdle races there must be a guarantee that there will be enough of them to warrant the training of horses for this kind of work. That there is the proper material in horses and riders is beyond dispute, and that they are attractive features to the public there can be no question. Recognized as a part of every day's sport by the Association the Fairs will incorporate them in the "speed programmes" and then there will be plenty of work for jumpers. Outside of those who are particularly interested in flat-racing the predilections are strongly in favor of hurdle-racing and the steeple chase. The education which is necessary for the first will be primary to that which will perfect the course for the other. With educated rider and horses trained to jump there is little danger, and yet remains the excitement to the spectators. Then by arranging the full programme and giving it publicity people can make preparations and train in accordance with their knowledge.

The great trouble with clubs and owners is to make the training of the other classes of horses than those in the front rank pay the expense incurred. Where there is a great deal of racing this is avoided. Handicaps, selling races, those in which winners are penalized and non-winners granted indulgences, are frequent, and so far as this practice can be incorporated in the racing on this coast so much the better it will be. There will be larger fields of starters and more interest taken. It is very seldom that there is a season when there is an equality among the performers. Usually there are a few which show such a decided superiority to the majority that there are no hopes of a contest; then the great equalizer comes in and a difference in the weight carried brings the crack on a level with the inferior. There is not a particle of sense in the outcry of "rewarding mediocrity." There is no sport in witnessing one horse galloping away from another. The great element of uncertainty must be a part of the contest to give it a zest. There must be a chance to lose as well as to win to set the blood bounding through veins and arteries. We offer these suggestions without a desire to regulate the action of the Association. The programmes so far have been very satisfactory, and there is little question that those in the future will not be of the same cast. The main thing is to come to a conclusion as soon as possible, and give owners and trainers a chance to get ready.

THE LAST DECISION IN THE EMBRYO.

Elsewhere we publish the last decision in the Embryo stakes. It is in keeping with those given last week. We must give the "member" the credit for being a persistent misrepresenter. Still we are sorry to see him drag the "chairman" into the mistake.

The parties interested in the yearling race settled the misunderstanding, and on a basis which was satisfactory to all. District Board, No. 5 met on the day fixed at the previous meeting. There was no one to prosecute the appeal, none to defend. The decision of the judges was not "affirmed." As all will testify who were present the ruling from the stand was that all three of the colts started under protest. The only case tried was the protest against Antevolo. The decision was that the protest was not sustained. The "Beard" also intimated that it was without jurisdiction. As a meeting of the Board cannot be held without two members being present it was idle to think of the postponed cases being tried before that tribunal. If it had jurisdiction Jas. McM. Shafter was incapacitated. We certainly should object to him passing on a case he had already decided. After two trials a third would be a greater blunder than we are in the habit of making.

Hereafter, in all probability, we will be compelled to write on this subject. For the present nothing more is necessary.

THE CLOSE OF THE SEASON.

There are three weeks yet before 1882 comes to a close. In California the "season" cannot be said to have ended until the requiem is chanted for the old, anthems sung for the new. For the past two weeks there has been spring-time. The grass is green in the fields, there are flowers in the gardens. The sun has set with a brilliancy akin to that of June in less favored localities, and though the rays came obliquely there was a summer warmth in the beams. The golden weather has engendered regrets. Regrets that so many dear friends have to endure the rigors of frost and snow, sleet and tempests. There is a compensation, however, for the martyrs, the bliss of ignorance, and the comforts of indoor life and bright, cheery fires. It is too early yet to summarize what has been done on the California turf and tracks, too soon to say what positions our horses occupy in the calendar of the year. There may be something startling yet to record. There is talk of a meeting which will bring some new performers to the front, and though the task may appear a forlorn hope, it may be that even the great scores of 1881 may be bettered. There are rumors, and whisperings of great capacity, and the sequel will not be known until the yule log is glowing and the mistletoe hangs from the rafters.

And now after the above was written comes the intelligence that a "cold wave" has swept over the "West." Eight degrees below zero at Chicago, fourteen below at Peoria, and in Nebraska twenty-one degrees below the point marked by a cipher. A mixture of snow and salt was thought to be the initial from which to measure, and this is warm in comparison to the mark so early shown. We have little patience to listen to the complaints when there is a fog in the morning, and almost a certainty that it will rise before 10 a. m., while at the same time there is a warmth in the air which does away with the necessity of an overcoat, and men in garments appropriate to summer in this locality are comfortable.

P. V. JOHNSON'S RECOLLECTIONS.

We are sure that our readers will agree that the reminiscences of P. V. Johnson which we copy from the "Breeder's Gazette" are interesting reading. Peter writes a very pleasant story of the horses he has had in charge, and there is instruction as well as pleasure in the perusal. He is always ready to acknowledge when he has made a mistake in driving a race, and also gives his reasons for thinking that the preliminary work had not been proper. Better than that he is not prone to insinuate that the horse was not "given his head," and is better pleased to accept the conclusion that he had erred in some point than to plead "fear of a record."

In the case of J. B. Thomas, copied this week, he ascribes a great deal of the improvement to supplementing the shoe of sixteen ounces with a six-ounce toe-weight. This question of toe-weights is still a puzzling problem, and before a fair understanding is reached there will be necessary a great many experiments. The experiments of one will not be sufficient and there is an urgency for a "comparison of notes" among trainers to perfect the knowledge.

Just such histories as those we have copied will have a direct bearing, and if all the drivers follow the example, there will be a general acquirement of knowledge and the advantages shared by every one interested in the development of the trotter.

Trotting on the Bay District Course.—On Saturday last a trotting race was commenced on the Bay District course. According to the advertised conditions the race was to be between "gentlemen's roadsters," and as frequently happens in this kind of races, there was some dissatisfaction. There were four engaged, Stranger, Proctor, Roan Tom and Fisher. At the opening of the pool sales, Stranger was largely the favorite, bringing \$50 to \$20 on Roan Tom, \$6 on Fisher and \$2 on Proctor. As Stranger won the first heat easily, the rates were \$40 on him to \$10 on all the others. The second heat Fisher won in improved time, and the pools marked \$22 on Stranger, \$20 on Fisher and \$4 for the field. The Fisher stock appreciated before the start for the third heat and he was the favorite. This was also won by him in still faster time, which the summary will show, and that too after a contretemps on the first turn caused by Stranger taking the pole too quickly. There being a heavy fog the finish of the race was postponed until Monday. There was an evident intention on the part of all the others to work against Fisher, and this was carried to a point that was very near an infraction of the rules. Fisher won, however, showing a remarkably fine burst of speed in the last half mile, trotting the last quarter inside of 2:30. Mr. Scott, who entered and drove Fisher, was warmly congratulated. Strictly an amateur, and to win over such drivers as Donathan, Kilip and Tim Kennedy, enhanced the pleasures of victory.

SUMMARY.

BAY DISTRICT COURSE, Saturday and Monday Dec. 3, and 4.—Trotting race; mile heats, three in five, to road wagons; purse and stake \$250; sixty per cent. to first horse, 25 to second and 15 per cent. to third.
T. W. Scott named g Fisher.....1 1 1
J. W. Kilip named b g Stranger.....2 2 2
S. Marks named b g Proctor.....3 4 3
J. B. Brown named r g Roan Tom.....4 3 4
Time, 2:51, 2:45, 2:43, 2:40.

POULTRY.

Regulating the Sale of Poultry.

The ordinance passed by the Common Council of New York city last spring, to the effect that the crops of all fowls offered for sale in that city shall be free from food or other substances, and shrunken close to the body, is said to be working well. It is said to have been brought about by the practice of stuffing the crops after the fowls were killed, and even the throats. A similar ordinance would not be a bad one in Chicago. It would equalize the thing, so that honest shippers and dealers would have a fair show, and buyers would not have to pay turkey prices for musty corn and gravel.—*Breeder's Gazette, Chicago.*

Like the Massachusetts law requiring the sale of eggs by weight instead of by count, the New York law referred to above cannot fail in time to become general, though whether to legislative enactment or to common consent it will owe its adoption remains to be seen. The fixing by law of the weight of a dozen of eggs is just as legitimate and needful as the establishment of the legal weight of a bushel of grain. Laws vary in this regard, 32 pounds of oats being a legal bushel in some localities and 34 in others. Of course the California custom of selling grain and vegetables by the cental is an improvement on the Eastern system of a bushel which means 32, 34, 48, 56 or 60 pounds, according to the commodity and the place. But the selling of eggs by weight will some day be adopted here, as will the empty-crop ordinance of New York.

A correspondent of the "Poultry Yard" thus describes his new remedy for chicken cholera: "While our neighbors for several miles around us have lost nearly all their chickens from the so-called cholera, ours are in fine condition. They were attacked with the premonitory symptoms of the disease, which seemed to be epidemic here, but we cured them and have no trouble with them since having accidentally found a cure. Cut up onions with food, and administer once a day for several days, afterward once a week will answer. Also mix a little ground ginger with their meal, once every day or two. We also give them a little salt every two or three weeks, which we deem highly necessary, and above all things, keep watermelons, muskmelons and cucumbers away from them. The tops of celery cut up with their food will be found beneficial, and they appear to like it very well. Do not get these statements mixed up. The onions and ginger for the cholera, the remainder constant attention. Too much whole corn we have found injurious; we give meal, of this only once in three or four days. Raw onions and a very little ginger against the world for curing cholera, if the disease has not been allowed to run too far." We endorse heartily the raw onions and ginger, but have never found melons injurious. Last summer we raised, in an amateur way, three hundred chickens and turkeys. Bushels of melon rinds and imperfect melons were thrown to them daily and eaten eagerly. Over ripe cucumbers were likewise devoured. We had no losses from any disease.—[*Rural World.*]

"Do we derive a greater profit from the sitter than from the non-sitter," is as yet an unsettled question. The best of the non-sitters do not average over 180 eggs during the year, but the sitter is equally as sure for 132 or more. There is a difference of four dozen eggs, and as the non-sitters lay more eggs in the summer season than in winter, the monetary value will not exceed 75 cents as the measure of difference. Using the Leghorn as a sample of the non-sitting breeds, and the Brahma to represent the sitters, it cannot be denied the latter, being better winter layers, are nearly if not quite equal to the Leghorns in monetary product, even if the number of eggs laid is smaller, owing to the enhanced price of eggs during the cold term. But the young chicks should be taken into the account, and on an average of only five to the brood after deducting loss and the low price of 20 cents per pound at two pounds each, the amount will be two dollars. Estimating yet lower in the price, making it 12½¢ per pound, we still have an advantage in favor of the sitter. The expense will correspond with the ratio of sale, and the same cannot be offset. The Leghorn matures earlier than the Brahma, and gains time in that respect. They take resting spells, however, from laying, and if they are not at work bringing forth chicks the time is lost. With all that may be said in favor of the non-sitter, it must be remembered that young chicks count in value as well as eggs.—[*Farm and Garden.*]

Mating self-colored fowls, as the White Leghorn, Black Spanish, White Dorkings, etc., little difficulty is experienced, as the principal object in uniting the sexes is to blend the good qualities of the sire and dam, and make sure that we have clean and purely-bred stock with which to operate, of either of these kinds. In mating Colored Dorkings, Dark Brahmas, Partridge Cochins and other parti-colored fowls for the same purpose the matter becomes more difficult to manage successfully because it is necessary that the same even hue in plumage, pencillings and markings that is possessed by the chosen sires and dams should be secured in the offspring.

Always have good and fat poultry where possible; in the country you may command it. About three weeks before you want to use them, six or twelve fowls, according to your consumption, should be put into the coop, and as you kill one or more replace them, to keep up the stock; for the first week feed them alternate days with boiled rice and soaked bread and milk. The remainder of the time mix Indian meal with the skim-mings of your stock pot and a teaspoon of moist sugar. The windows of your poultry-house must be darkened. Fowls should be carefully drawn, so that the gall bladder is uninjured.

Introduce new blood into your flock every year or so by either buying a cockerel or sittings of eggs from some reliable breeder.

Poor shelter, care and feed will in a few generations make scrubs of the finest stock.

Food for Fattening.

We receive so many inquiries about this time every year as to the best methods and food to give poultry that is selected to fatten, we wish to give some general advice on the subject to those who may be ignorant on this particular business, which will engage the attention of a large share of our patrons during this and next month. November and December cover the winter early holidays, and Thanksgiving and Christmas will shortly come round again, when the turkeys and chickens, the geese and ducks will be in active demand for the palates of myriads who at this season of the year, especially, find it "a part of their common education" to luxuriate more or less on good fat poultry.

No green food is now desirable. All you are aiming for is to put additional flesh upon these fowls, and to do this in the shortest possible time. So long as they eat well they will gain in weight, up to a certain period, treated in this manner, and two or three weeks will bring them to their best. If they become cloyed, and lose their appetite at an earlier date, after thus being cooped up, kill them off at once. They have reached the most profitable day of their existence, and will no longer improve in the desired direction. In this simple way we have fattened many previously well-kept fowls in three weeks' time satisfactorily, and we have known many hundreds thus fattened that have dressed handsomely in some days less time, the mode thus briefly recommended being economical, as well as expeditious, cleanly, and very convenient. A greater amount of flesh can be produced in proportion to the grain fed, when confinement is resorted to, and, if the prisoners are well attended, and the term of incarceration does not last too long, there is not much danger of disease.

We have not mentioned two prerequisites towards fattening fowls successfully and speedily, but we take it for granted that it will be understood that your birds, when cooped up for this purpose, shall be free from vermin, and during their confinement that they must be kept so. No greater drawback to the growth and improvement of domestic fowls exists than the presence of this pest upon their bodies, or in the pens to which they are limited. We therefore suggest that to fatten fowls profitably they must be kept from this annoyance during the process. Most depends on keeping the subjects in a condition free from worrying and distracting circumstances. Stick a pin here, you who are new to the business.—*Poultry Yard.*

The custom still in vogue in some parts of this country, of wringing the necks of fowls, seems a relic of barbarism. It is not only cruel, but is unsanitary. When killed in this way, instead of cutting the head off, the blood all remains in the body, rendering the flesh unwholesome, as it would be in the case of an ox. The blood is very putrefactive, as all may know by allowing some to remain in the sun half an hour in warm weather, emitting a bad odor in a very short time. When we remember that about one-half of the blood is composed of the waste and worn-out portions of the body, semi-poisonous, and that this particularly, with the pure portion, soon putrefies while remaining just where they are in life, it is evident that all of the flesh will become more or less affected by the putrescent mass. Instead of this barbarous wringing of the neck, it is advisable to cut the head off at a single blow with a sharp instrument, that the blood may freely flow with all of the waste matter. That this may be done effectually, it is well to hang by the legs as soon as possible that the blood may flow while still warm.

Worms in Hogs.

Last fall Isom Vaughn, of Moralla, Oregon, lost fourteen head of hogs. He examined the last that died and found the entrails full of worms, varying in length from three to ten inches. No other hogs in the neighborhood were then known to be afflicted with them, but now others are losing hogs from the same cause. It seems to be more fatal among pigs than grown hogs.

Judging from the length of the worms, they are evidently of the *Eustrogylus Gigas* species. They almost invariably prove more fatal to pigs than to grown hogs. In severe attacks of this parasite the symptoms somewhat resemble cholera, and have been frequently confounded with that disease.

Treatment oftentimes proves unsuccessful. First, separate the diseased ones from the apparently healthy ones, and feed them pretty liberally with nutritious feed. Give a teaspoonful of the following mixture to the sick ones twice daily; to the others of the same herd once daily: Powdered sulphate of iron, einchina, gentian, ginger, and fenugreek, of each 2 oz.; powdered nuxvomica and capsicum, of each 2 drs. Mix all the ingredients together thoroughly.—*Cor. Rural Spirit*

It seems as though such a dose as that ought to kill the worms, and the hogs too, and if that is the only treatment known we do not wonder "that treatment often proves unsuccessful."

Some people are in the habit, when first sitting down to milk, of drawing a little milk to wet their hands and the teats of the cow. Such a practice is anything but cleanly, and should always be avoided. I have seen milkers with a reeking compound of milk, hairs and manure oozing from between their fingers and dropping into the pail. In this way some of the milk in our dairies receives a taint, the cause of which seems unaccountable to the dairyman, and which is imparted to the cream and butter. Cows do not milk any better with wet hands than with dry. In the summer, when the cows are in the pasture, the udder will usually be clean, except in wet weather; still, if there is no occasion to wash the bag, it is always well to wipe it thoroughly with cloth, before milking, to remove loose hairs and dust.—*New England Farmer.*

THE BREEDER AND SPORTSMAN.—We have received in exchange the new California sporting paper with the above title. It is a handsome paper ably edited and will doubtless prove very popular. It is edited by Joseph Cairn Simpson, and is issued weekly from 503 Montgomery St., San Francisco, at \$5.00 per annum.—*Maine Horse Breeders' Monthly.*

THE GUN.

Sport (?)

The Grass Valley *Tidings*, in speaking of killing deer out of season, lays the matter before its readers in a very forcible manner:

"Killing deer at this season must have great pleasure in it. The beasts are attending to their domestic affairs, and are so intent on obeying the command which tells them to study the multiplication table, that they heed not the hunter. Therefore they fall an easy prey to the gun of the man who sneaks up to them. The "antlered monarch" while wooing his gentle-eyed sweetheart has no attention for the sportsman (?) who creeps through the brush for the purpose of firing a murderous shot into the bower of love. Hence, it is fun now, or sport, to kill the deer. The killer gets much meat without having to tire himself out with long walks, and without having to annoy himself with the exercise of skill and patience. The meat he gets, in these days, is very fine. Perhaps the flesh of a "settin' hen," after she has been attending to her incubation affairs on two sets of eggs, is about the only flesh that surpasses that of the swell-necked buck of the deer tribe at this season of the year. The timid doe is now an invalid, as Michelet would say, and her flesh is not fit for human food. At such times as these that are now prevailing among deer, even the wolf will not kill female or fawn of the deer, unless compelled so to do by the most pressing hunger. But the wolf is not a sportsman."

RAILROADING DEER.—The further from civilization that the deer tribe retreat the more eager seem the hunters to exterminate these beautiful animals. From across the mountains comes a paragraph from an exchange under the above heading: The stage messenger who runs on the N. & O. for G. W. Meylert killed a deer last Saturday just beyond Rock Springs. A passenger on the train saw seven or eight fine bucks and does standing on a bluff about 200 yards west of the track watching the train. The locomotive was stopped when the messenger jumped off and shot a nice fat doe. The rest of the band stood watching the wounded animal for several minutes after the shot was fired. The train men say they see deer nearly every trip they make. Many of Reno's deer hunters are going out for a hunt in a day or two.

UP THE RIVER.—Hunting up the river is very poor—that is, the hunting is good enough, but the finding and killing is poor. Only a few good bags have been made. The ducks go on to the marshes and stay during the night but on the first report of the gun in the morning they are up and away and do not return till the evening. Ducks are seen by the thousands laying out in Suisun and San Pablo Bays but they are safe from the anxious hunters. Nothing disgusts the up river hunters more than to wait all day behind their blinds and just at dusk when they are returning to the city see large flocks of canvasbacks, widgeon and teal flying to the very places where they have been all day. Ducks are getting cunning; they will not fly and they are unapproachable.

GEESSE.—Wild geese are a great nuisance to the farmers of California, and killing and scaring them away forms one of the greatest items of expense to wheat growers. We understand that Dr. Glenn purchased twenty-five guns at one time a few days ago, for the purpose of killing or frightening the geese from his grain fields. He had, of course, a number of guns before this, so that it is fair to presume that he will have in the neighborhood of fifty men at this work. Several hundred men are required in this county for the work of "herding geese." When the wheat first comes up is the worst time.—*Colusa Sun*.

A CHANGE.—The Supervisors of Plumas county have changed the close season for deer and fish, so it is now lawful to shoot deer at any time between the 1st of July and the 1st of January; anglers may pursue their sport from May 1st to February 1st. The supervisors claim that the change that they have made in the law protects the deer and fish in Plumas county to better effect than the old laws did, but all the sportsmen think that they are overstepping their authority in meddling with laws passed by the Legislature.

THE PLACE FOR HUNTERS.—The sagebrush between Pete Flynn's and Cane Springs, on the Idaho Road, is said to be literally alive with sagehens and prairie chickens. The stage drivers say these game birds fly up all around the stage every day and a good hunter could bag a sack full of them in a very short time. The prairie chickens, though about the size of the birds of that name in the Western States, are somewhat lighter in color, and are known in some parts of the country as "willow grouse."—*Silver State*.

Messrs. Hall, Ladd and Hardy shooting at Alviso last Sunday bagged seventy-five ducks, most of which they disposed of on the Oakland boat on their way home, to less-fortunate hunters. All the hunters on that boat had something in the game line to exhibit to their friends by which to show their ability as good shots. Oh, deception! Thy name is Nimrod.

At the head of the South Fork of Crooked river there is a lake where thousands of ducks rear their young, and at this time of the year, and in fact all winter, there are great numbers of swan, geese and ducks, that have never been hunted, and are very tame. The surrounding country is delightful, and for the hunter who is fond of wing shooting, this is a perfect paradise.—*Ex*.

A farmer near Gilroy has a trained cow to aid in hunting wild geese that are destroying his grain fields. The cow walks towards the flock of feeding destroyers very slowly and the hunter by the side opposite and at the word she will lie down while he discharges both barrels into the flock who up to the time of the report of the gun are unaware of the hunter's presence.

The vicinity of Bouldin island is looming up a little in the direction of duck shooting. Some very good shoots have been made up there lately, 80 ducks being the biggest bag. They were principally teal. They are quite plentiful there at present and find good feed in the teal grass. It is now ripe and the birds are all in their glory.

Duck-hunting near Watsonville is fine at present. An exchange says that every man that owns or can buy, beg or borrow a gun is out with the attacking party and also that the ammunition dealers are the ones most benefited as the ducks don't seem to be worried by the presence of guns or hunters.

Has the hog that was shot, through sheer cussedness, at Sherman Island been paid for yet?

TIGER-SHOOTING ON THE HILLS.

An Ambush by the Water—Attacking a Tiger in Her Mountain Lair.

It was about mid-day of the 29th March, 18—, that news was brought me of a large tiger at the Maharajpore waterfalls called "Mothie Jharna." Almost about the same time a friend (a great sportsman) came from Maidah to my camp at Rajmah with a view of accompanying me in some of my shooting excursions, as he knew I was always going somewhere for sport. I was indeed very glad to see him, and especially on account of the *bugh ka kubbur* just brought.

"Well, Whin," said my friend Erst, "how have you been pulling along these twenty days which I believe is about the time since I last saw you?" "Very well, thanks," I rejoined, "but I hear poor Joe is still suffering from fever." "Yes, by-the-by he is, but what a strange thing is March and fever. Well, the more we live the more we learn!" "I say," I asked, "do you remember our last hunt at Peerpointe? What a scratch, upon my word. The tiger well nigh took you?" "Ah! yes, the beast, but hang that, have you any news to give?"

"Well, perhaps I have, what then? Do you suppose I am going to gratify your wish, may I say, not yet." "Ah! let us hear anything good?" "No, not yet; come, there is luncheon on table, and the rest by and by." "So saying I drew up my chair, my friend followed suit, and we had a hearty tiff, washing it down with a bottle of good Burgundy, then offering my friend a cheroot, and taking one myself, walked leisurely into the sitting room and betaking ourselves to two easy chairs we sat puffing and chatting away until two, when I rose and told my companion it was high time to get ready, for our friend Mr. Stripes would come and miss us if we came later; and the acquaintanceship to be formed between us would have to be deferred to our disappointment. At half past two o'clock we left the camp, followed by some half a dozen followers. The sun was scorching hot, and the distance was not short, so putting spurs to our steeds, we galloped off, never as much on our way exchanging a word with each other. We reached in good time, and met the Sonthals who had brought me *khubber*, sitting at the foot of the hills, where I had directed them to await me.

Here we dismounted, and, leaving the horses with some of the men, made straight for the basin where the tiger used to come to drink. Now the question arose where we were to take up our position, so as to be hidden from Stripes' observation, and still command a look of the entire basin. "A ledge of overhanging rock," remarked Erst, "is about the best, but where to find that?" "Let us ascend a little to our left, and I think we shall find some suitable place." "Yes, I think so," we climbed a little higher and got a place that suited us to "kill." The arrangements completed, we took up our posts, and sat quietly watching. One, two, three hours passed, and nothing appeared, although once we heard a rustle, but it turned out to be a boar. Night had now fairly set in, and were it not for the moon who favored us with her light, we would have been wrapped in total darkness. However, that night was not to be a blank in our sporting diary, and an hour or so after the old tasker's appearance we saw before us a beautiful Royal Bengal, of which even a Rajah need be proud. From where or how he came was matter for conjecture, as none of us (although we kept an unremitting watch) saw or heard his approach. But there he was, as large as life, and none could doubt his presence. We would fain have looked on, but our visitor seemed uneasy and was suspiciously eyeing every cover, as if he new there was danger lurking about him. I do not know what made him suspicious, but that he had become so was beyond doubt. His head was turning from side to side, his grim orbs flashing like balls of fire, and he appeared as if doubtful what to do. Once he looked up in our direction, and we thought we were discovered; then, advancing quickly a few paces, he halted, steadfastly gazing at some object at our right. Then, as if to draw a motion from what he suspected, he crouched; finding however everything still and motionless he rose and walked deliberately towards the water, reaching which he stooped and looked up again. And well might he have looked, for just then were poised at him two deadly weapons by hands that never failed; and the next moment leapt forth two burning streams, amidst two deafening reports that made the hills reverberate.

And hurled wild nature's beauty from the rock he stood
To a depth unknown, and from whence no sound we heard,
Save that of the wounded creature in his dying throes.

One dull moan—that moan so full of significance and rare delight to a practiced ear—and all was still. The work of blood was done. We did not leave our places, but determined to stay here till the morning, as nothing could be more dangerous than finding our way out of the jungles at that late hour of the night. Nothing, however, occurred worth notice and the time passed rather heavily.

The grey tinge of morning appeared; the wild notes of the jay could be heard; the chirping of some thousands of sparrows, along with flocks of minas, showed that daybreak was at hand. Rising and telling my companion, who was half asleep, that it was time we should be gone, I ordered the men (four in number) who were with us to follow. We moved on; but instead of a retrograde march down hill, I was walking in a southerly direction which would take us to the summit. My friend observing this inquired whither I was going, and on my telling him that I proposed going to the top to see if we could not spy some game which would add to our bag, my friend seemed pleased, and added that it was just like me, to make the most of it while I could. A half hour's ascent brought us to the summit, and from here we looked about; and though I spied a deer once, it was too far to shoot. My friend also saw one, but for the same reason did not fire. "Come, let us go to the other hill yonder," I said to Erst, "and see if we cannot meet with better luck." "All right," he rejoined, and we were soon on its brow, trying to catch a glimpse at some unfortunate stag who might happen to be close by. But in this we were disappointed, seeing them descend by herds of ten and twelve toward the plain. While we were still gazing on our intended victims, and chewing, as one may well imagine, the cud of vexation, we heard the men hail out: "Sahib," "sahib," and on looking round saw them standing near a large cave, and beckoning us to come. We went up directly, and they told us that there was some animal inside, as they heard something like a sneeze; and on going close distinctly recognized the breathing of some large beast. "What do you think it is, Erst?" "Why it may be a tiger, who can say." "That is just what I fancy it is." "Well, how do you propose to get him out?" "Get him out, that is beyond our power; we may bawl and shout as much as we like, but we shall never get him to budge an inch, you may rest assured. Had we a supply of rockets, we need not have despaired, but as we are situated, we had better not meddle with him." "Oh! blow the rockets, I will not stir from here unless I get him out, or shoot him in his den." "Don't be foolish, Whin." "Foolish! ha-ha-ha, you

will see presently, Erst, or I be hanged," saying which I walked straight for the cave. My friend divining my intention ran and laid hold of me, remonstrating the while; but it was no use, my mind was made, and nothing could shake or alter my determination. Erst knowing this, let me go, only making me promise not to endanger my life by any act of imprudence.

I strode on to the mouth of the den, then stopping commenced a series of fearful yells in the hope of getting the monster out; but finding this fail I adopted another and much bolder expedient—that of peeping into the cave. True, my rifle was brought to my shoulder in so doing, but this availed me nothing. The moment I raised my head, with what intention is already known, the tiger, for such it was, sprang out, whether at me or simply to run away I cared not to know, but this much is certain that he sent me head over heels, and were it not for my bearer Ramkissen, who caught me when I fell, I should have been hurled to the foot of the hill, and smashed to jelly. But the tiger did not go scot free; although dealt with so suddenly, I did not let him escape so easily, for the moment I saw his body above me (though in mid-air) I fired, shooting him through his intestines, (as we afterward found), and getting myself knocked on the head, by one of his hind paws coming in contact with my solah-toppe. While I fell pell-mell Erst did not stand an idle spectator, but watching the tiger as he descended, sent a ball after him, hitting him on the shoulder, which sent him rolling to the bottom of the (if I may be allowed to call it) valley. Here we met the brute trying to drag himself away, when I gave him the *coup de grace*. And thus we bagged two tigers—the first measuring 9 feet 8 inches, and the second 9 feet 3 inches, from tip of nose to insertion of tail.—*Whinop in the Asian*.

Sportsmen's Tournament.

The sportsmen's tournament was very well attended yesterday by the crack shots from various parts of the county. There were twenty-two entries for the prizes. The day was fine for shooting. The following are the scores made:

J. P. Leonard.....	0	1	1	0	0	0	0	0	0	1	—	3
Pearson.....	1	1	0	1	0	1	0	1	1	1	—	9
Wm. J. Morgan.....	1	1	0	0	1	0	1	1	1	1	—	9
Spurgeon.....	1	1	1	1	1	1	1	1	1	0	—	11
Scott.....	1	1	0	1	0	1	1	1	1	1	—	10
O. B. Reading.....	0	1	1	1	0	1	1	1	1	1	—	10
Lon Rose.....	1	0	1	1	1	1	1	1	1	0	—	10
Thomas.....	1	1	0	0	1	0	0	1	1	1	—	7
Leon D. Freer.....	1	0	1	1	1	1	0	1	1	0	—	9
A. F. Jones.....	0	1	0	1	0	1	0	1	0	0	—	5
Waldron.....	1	0	1	1	0	0	1	1	1	0	—	8
Robt. W. Smith.....	0	1	1	0	1	1	1	0	1	0	—	8
S. C. Quimby.....	1	0	1	1	1	1	1	0	1	1	—	10
Henderson.....	1	1	1	1	0	1	0	1	1	1	—	10
George Stevens.....	1	1	1	0	0	1	1	1	0	0	—	6
George Ditzler.....	1	0	1	1	0	0	0	0	0	0	—	4
W. O. Enslow.....	0	0	0	1	0	1	0	1	0	1	—	5
P. O. Hundley.....	0	1	0	1	0	1	1	1	0	1	—	7
Onyett.....	0	0	0	1	1	1	1	1	0	1	—	7
Thul.....	1	0	1	0	1	1	0	1	1	1	—	8
Brown.....	1	1	0	1	0	1	1	0	1	1	—	8

Mr. Spurgeon was awarded the first money and in shooting off the ties Mr. Rose won the second money; Mr. Henderson, the third; Mr. Reading, the fourth, and Mr. Scott the fifth.—*Oroville Mercury, Dec. 5th*.

A correspondent of the BREEDER AND SPORTSMAN up at Bouldin island has been having a goose hunt. He started out a few mornings ago when the weather was foggy and went ahead before daylight guided by the noise of the geese. They were found on floating bogs, from six to fifty in number on each bog—as many as could stand or sit on them. Our friend made up his mind after one or two failures to blaze away at anything he saw white and he followed this rule until he had eleven. It was then good daylight and foggy as could be. He then got into a heavy bunch of tule where they had been feeding on young flax and staked out his dead geese. They made quite a fair flock and as our hunter was a good "caller" he had some fair sport, killing thirty-five white geese and four grey. The fog let up and so did the geese. These were killed by No. 7 chilled shot. Last season this same hunter killed 118 with No. 7 shot and this is his standard size for general duck shooting and he makes a living out of shooting too. He uses four and a half drams of Hazard powder and an 8-pound No. 10 gun with one and an eighth ounces of shot to a load. Still he thinks a heavier gun would be better as it would not recoil so much.

The Chatham (N. B.) *World* makes affidavit to the following: On Tuesday evening last when George Trevors, who had been working in the steamship Coban, then lying at Mr. Sergeant's mill wharf, was done his day's work, he had occasion to go up to the store of Daniel Baldwin to purchase a few articles. It was then dark, and when he started for his home in the Douglasfield, he took the short cut across the woods. He had gone about a mile and a half when he was attacked by a very large bear. Being unarmed and having no other weapon than a bottle of paraffine, he struck the bear and broke the bottle of oil all over him. The bear sprang on him and commenced hugging him, when George had the presence of mind to light a match and set fire to him, and in less than five minutes she was all consumed but the head and shoulders. George then commenced to carry water in his hat to quench the fire to save the snout so as to get the bounty.

Mr. Rowell, the gunsmith, has on exhibition a rare species of the hen quail, recently killed at Kincaid's Flat. The distinguishing mark from others is the very light dove color and shining appearance of its feathers about the neck—the under part of the wings being white—so that the bird on the wing has the resemblance of a white quail.—*Butte Record*.

Messrs. St. John and Fairbanks killed four dozen quail near Paduma last Sunday. Savage Bros. slaughtered thirty-two ducks the same day, and T. R. Jacobs and Chas. Kelley bagged twenty ducks in a couple of hours' evening shooting.

A large bag of 172 ducks was brought from the Alviso marshes last Sunday. The good shots were Messrs. Johnson, Higgins, Lachman and Burrell. Jake Johnson made the highest score, killing sixty birds.

Mr. F. Butler was up the Suisun Creek last Sunday and killed 20 ducks. He says that one has to work hard and shoot very accurate to have any satisfaction hunting in a boat in the creek.

There is good hunting at Alviso and Alvarado marshes. Most all who go down have fair luck. Though the ducks all fly high they fly very lively so it makes it very interesting for the good shots.

Gun-making is one of the foremost industries in Syracuse, N. Y. The sales of guns manufactured there during the past year are said to have been \$200,000, based on a capital of only \$95,000.

A. F. Adams in one day's shooting last week at Alvarado bagged twenty-six teal. A few evenings later he shot eight ducks in one hour on the Brooklyn marshes.

THE KENNEL.

The Gilroy Field Trials.

The Second Annual Field Trials of the Gilroy Rod and Gun Club commenced on Monday, the 27th inst. The weather was fine and birds somewhat scarce. Some thirty or forty spectators were present, including many well known sportsmen from San Francisco. The judges were H. H. Briggs, of San Francisco, and Messrs. Horton and D. M. Pyle of Gilroy. The all-age stake, with seven entries, was commenced by Leavesley's Don, a liver Belton setter, two and a half years old, by Knox's Belton Belle handled by D. Gilroy, and H. M. Briggs' Count Warwick, two and a half years old, by Ganse's Warwick Belle handled by E. Leavesley. Some very fine points and backs were made by both dogs, and the spectators, many of whom had never seen the performance of thoroughbred hunting dogs, were highly pleased at the exhibition of statuary beauty exhibited by the dogs on point. The heat was awarded to Count Warwick. The next race put down was Leavesley's Juno, two and a half years, Belton-Belle, liver and white, handled by owner, and H. H. Briggs' Belle, Red Irish setter, three years, handled by owner. Juno, a double prize winner of last year, was not in good form, and did not hunt with her accustomed vim, and the heat was awarded to Belle. The next brace put down was W. H. Whittier's lemon and white setter Rock, four years by Luther Adair's Rock-Sibyll, handled by T. Hildebrand, and Leavesley's Daisy. Blue Belton bitch by Carlowitz—True, six years, entered and handled by D. M. Pyle. The action of the two dogs was very animated and much admired by all present. Rock's brilliant action and Daisy's caution added to her energy and fine style were well contrasted. The old bitch, originally Waddington's Daisy from Iowa, appeared to think that the honor of the East was represented in her, she being a prize winner, both in quail and prairie chickens, and let herself out in grand style, and was finally awarded the heat. Next came a bye, Wm. Henderson's Jim, a Gordon setter by Pestolise's Spirit and Welch's Quail, handled by Leavesley, and Daisy, handled by Pyle. The shadows of evening coming on, the dogs were taken up to be put down next day.

Tuesday.

The day was a repetition of yesterday, bright and clear, and Mr. James Murphy's ranch, some nine miles from Gilroy, was selected to continue the trials. The grounds hunted on yesterday being too full of strong-scented weeds. Plenty of birds were soon found and the first brace put down was Belle and Count Warwick. Jim, the Gordon setter, whose unfinished heat was to have been settled, and who had his red ribbon still attached to his neck, appeared to entertain the idea that he had beaten Daisy, and was so anxious to get home to exhibit his trophy that on the door of his box stall being opened in the morning he made a bee line for Leavesley's ranch, and arrived there with colors flying, to the great admiration and wonder of ten or twenty puppies, who greeted him with many anxious inquiries as to his success at the trial. But on observing Jim's red ribbon, a bit of jealousy seemed to poison them, for they all pitched on to him, and he was only too glad to divide honors with them. Worse still, he unfortunately lost his chances in the trials. After some good work Belle was given the heat. It now only remained for Belle and Daisy to decide the winner of the first prize. Daisy showed phenomenal power of hunting and scent for her age and won easily. Her last point settled the business, and Daisy was awarded the heat, winning first prize, besides a silver cup, a special prize, given by Senator Traylor, for the best dog in the trials.

Puppy Stakes.

The first brace put down was F. G. Abell's Scott Gordon setter by Max—Jip, twenty-two months, and J. L. Nichle's eighteen months King, by C. Miller's Joe—Farmer's Queen, lever and white. Scott handled by D. Gilroy. King by T. Hildebrand. Some very fine work was done by these two dogs, and they were so nearly matched, that after running two horses, the judges could not decide upon the merits so they were ordered to be put down again next day.

Wednesday.

Scott and King being called to finish their heat, it was found that King was sick and had been withdrawn by T. Hildebrand.

The next brace was Leavesley's Duke, two and one-half years, blue Belton setter, C. Miller's Joe and Farmer's Queen and R. E. Bybee's Portland, Oregon, Foxhall, red and white Irish setter, Ben—Ruby, 21 months.

Duke won the heat. Duke and Silk ran next and Duke won.

Scott and Mollie Daily, English setter by Treanor's Ben, and D. Vaul's Beauty, next ran. Scott won.

Red Bess, a bye, was then run against Duke who won. The concluding heat for first prize was then run by Duke and Scott and Scott won.

A special prize, silver cup, presented by W. F. Whittier to owner of best brace of puppies run at the trials, to Duke and Mollie Daily owned by E. Leavesley.

Special prize of a pointer puppy, value \$25, presented by G. A. Bassford of Colusa, for best dog not placed, to Rock.

The trials were a great success and it is the intention of the Gilroy Club to import Bob Whites and place them out in a piece of reserved ground with our own quail, for next year's trials, so as to insure plenty of birds. Two amateurs entered dogs and handled them well, and it is to be hoped that their example will be followed next year by many others as it is the intention of the Gilroy Club to leave nothing undone to make these trials better every year, both as to their management and the selection and preservation of suitable ground, well stocked with birds to run of the heats quietly and with satisfaction to all parties concerned. Some of the decisions of the judges were commented upon freely by outsiders, but upon the whole their decisions were received with much satisfaction.

COURSING IN MARYLAND.—The popularity of the ancient spirit of coursing in the old country can be judged from the fact that 52 first-class matches were run during the month of November.

THE BULLDOG.

Lord Macaulay as an Authority.—The Bulldog as a Retriever—Etc.

This unique species of the canine race derives his name from his almost universal employment in bull baiting in England up to the middle of the present century. The satisfaction with which he entered upon that congenial work was the principal reason for the passage of laws prohibiting bull baiting with dogs, for as Lord Macaulay says: "The Puritans opposed bull baiting, not because it gave the bull pain but because it afforded pleasure to the dogs." Thus we see that it is dangerous even for dogs to evince pleasure in anything, for had the bulldog gone at his work in a reluctant manner and not until forcibly urged on by his master these long-faced interferences with the course of nature would not have stopped bull baiting and thereby signed the death warrant of one of the noblest breeds of animals that ever graced this earth. Previous writers on the dog have sadly libeled this meritorious breed and it is felt that at this late day some tribute should be paid to the few remaining representatives of a once great and noble race. Even the learned Youatt went out of his way to slander the bulldog by saying that he was not capable of education and was fit for nothing but ferocity and combat. Now the truth is that the bulldog is a very intellectual animal as dogs go and were as much attention paid to his education and training as falls to the lot of the setter, pointer or spaniel he would be found as tractable as any of them. I once owned a bulldog named Bill whom I trained to do all the tricks commonly performed by pet dogs. Bill was the ugliest brindled animal that ever lived but there was a look of rugged honesty in his face and a general air of bold, manly determination about him that made me much attached to him. When he was six months old he was so fearfully under-shot—his front teeth and tusks protruded like those of a wild boar—that he was the general terror of all the females about the place and it was to convince a favorite sister that he was not as bad as he looked that I undertook to educate him in all the acts that go to make up a perfect house dog. First I taught him not to tear, fight or chase his natural enemies, the cats. Four fine tortoise-shell kittens were offered up as a sacrifice to his natural instincts, but in less than ten weeks Bill had learned to leave cats alone, and even to treat them with courtesy. When he once understood that cat's meat was a prohibited luxury, no amount of temptation could induce him to forget his lessons, and I have seen him allow a cat, that had recently become a mother, to scratch his face until it bled without any resentment. It took about half an hour to teach Bill to retrieve, and when once he knew what was meant no distance was too long for him to fetch any designated article. Right here his gameness came in to a remarkable extent. When sent for anything he would never let go of it until he placed it in my hand, and when he grew to be of mature age I won dozens of bets that the article he was bringing could not be taken away from him. He was an invaluable dog at a pigeon shoot. Send him after a dead bird, he might not get there ahead of the other dogs, but it was dollars to cents he would lay for them on the return trip and take the game away from the lucky, or rather unlucky, animal that had secured it. If there was ever any dispute as to who killed a bird, when my boyish companions and myself were out shooting, I was always ready to leave the question for the dogs to decide, being sure that Bill would get the game if he had to kill every dog in the field to do it. Though a smooth haired dog, Bill was one of the best water retrievers I ever saw and no water was too cold nor swim too long to keep him from dead game. I taught him to sit on his hind legs, beg, lie down as if dead with his fore feet in the air, and carry a small toy gun in his fore legs while he walked around a room upon his hind ones. He would follow me up a ladder using his teeth to hold on while his legs moved up to a higher step. So docile was he with our family that the girls at last adopted the ugly brute for their own and never thought of taking a walk unless Bill was along for an escort. The large city in which our family lived was not free from male loafers but Bill was a better and a surer protection to the girls than any masculine human friend and on one occasion when a friend of the family touched my younger sister on the arm in the street to attract her attention he was reminded of his breach of etiquette by having Bill's teeth fastened in the calf of his leg. Father used to say that he was dead sure no young men would come fooling around the girls when Bill was along. Bill died long ago but his memory lives and is a standing denial to those who claim that the bulldog is incapable of culture. I hope that this digression will be pardoned and will try to atone for it by getting right down to the general features of bulldog character and wasting no more space in giving particular instances. When one looks a bulldog in the face the first and last thing he notices is an appearance of stolid courage. The staunch Moslem who throws himself into the hottest of the fray with no thought but of victory or a place in Paradise with green robed houris to minister to his pleasures has just such a look. The old masters gave their pictures of heroes just such a look; all brave men have it habitually and all men not naturally brave when they have made up their minds to a brave or desperate action have the same appearance. But with men there is this difference, they combine intelligence of results with a regardlessness of them, while the bulldog shows by his appearance that he has not the slightest expectation of any ill or hurt befalling him. His is not a sensitive nature and in that respect he is immeasurably inferior to the lowest type of man. The tortured Indian, like the bulldog, will not cry aloud for mercy, but the Indian is away ahead of the dog because while his courage makes him keep down the howl of pain the dog feels little or no pain and consequently has no great desire to howl. The game bulldog in a fight will never quit, but allow his blood to cool and his wounds to become sore to the touch, my word for it he will decline a second encounter. So even in this matter of bulldog courage the courageous man is ahead. One of the chiefest values of the bulldog is his faculty of transmitting gameness to his progeny no matter what the character of the maternal relative. On this account nearly all the best strains of the greyhound have been crossed with the bull and the result is the progeny, even though subsequent breeding has left no trace of the bull's shape and but the merest trace of his blood, will run after their game until they drop dead from exhaustion. The bulldog is undoubtedly bred from the mastiff, which is an original breed peculiar to the British Islands. He has more intelligence and a finer scent than the mastiff. But the whole trouble with the bulldog is that he has been relegated to the company of fighters, loafers, and ruffians for so long that he has imbibed their bad traits to a considerable extent. He is also kept too much on

the chain and is not given as much human society as is necessary to rescue any breed of the dog from its natural and wolfish savageness and foxish cunning. EDWIN.

Arizona Correspondence.

The following letter from an Arizona sportsman contains something of interest to every sportsman's club in the State. There is an abundance of such dogs as Mr. Jones describes in and around San Francisco and doubtless many are for sale.

TOMBSTONE, Arizona.

EDITOR BREEDER AND SPORTSMAN, SAN FRANCISCO: A constant and appreciative reader of your delightful paper takes the liberty to ask your advice and assistance. I want to procure a pair of Setter pups (Irish preferred), dog and bitch, of the purest strain and pure field trial winners. The dogs must be like Caesar's wife, above suspicion, and I take the liberty to ask you to recommend me to some one in whom implicit reliance can be had. It will cost me a good deal to get them here and then considering the trouble of breaking them I want to feel that the pups I get are worth the trouble. I don't believe there is a pure blooded, well-broken pointer or setter in this benighted Territory, and having in by-gone days enjoyed the blessing of good dogs I propose to have them again if I can accomplish it. By the way, Mr. Editor, the quail most common to this vicinity is the most beautiful game bird I have ever seen and to distinguish it from the black plume California quail, and for want of better knowledge, we call it the grey quail. The bird is a little larger than the California quail (which we also have in great abundance), with rich grey plumage, speckled breast and most beautiful top-knot with snow-white plume. I am not sure but have been told that it is peculiar to Arizona and New Mexico and is found at times forty miles from water. As you approach the watercourses the California quail seem to take precedence. I would like to know the true name of this bird if my meager description will furnish you an idea of what it is.

I have a few dozen pair that I caught when quite young and have them in large pens where they have become quite tame, and I believe from their docility that they will be easily domesticated.

If any of your readers are half as enthusiastic as I am on the question of game, bird and field sports, and care to try the experiment, I will ship them a few pairs of these birds, and they can see what they are. Also if any person or club wants to stock a place I will send them all they want, in exchange for a pair of pups as I described. HARRY P. JONES.

Eastern Field Trials.

HIGH POINT, N. C., Nov. 20, 1882.

Very heavy frost covered the earth, bushes and grass this morning; the sky was cloudy, the atmosphere chilly and raw, and there was very little wind. The birds were wild and would not lie to the dogs, but ran, rendering it almost impossible to get points on them. Peg and Countess were first put down to conclude their heat, and after a run of one hour and forty-five minutes, during which more flushes than points were made, Peg was awarded the heat. Immediately after Don and Peg were put down to decide the winner of the cup. The sun was now shining and speedily melted the frost, while the atmosphere was warmer and altogether it was more favorable for good work, but Peg had become rattled by the running birds in her previous heat and was very unsteady. Both pointed simultaneously, Don standing and Peg flat. The voices of the crowd caused the bevy, which was in front of Peg, to move, when she also moved a step or two, and the bevy flushed wild. Don soon after made another point which Peg refused to back, but dashed ahead of him, flushed a single bird and then drew to a point on those remaining. The Judges ordered the heat up and awarded the heat and cup to Don.

The all-aged stake—The running for the all-aged stakes commenced with the first brace, Croxeth and Monarch, which was won by Croxeth in fifteen minutes. The winner went in grand style, without an error, on a scattering bevy. The next brace, Rab and Bravo, were sent down and this was won by Rab, after a heat of nearly two hours, during which very few birds were found, although a very large extent of territory was gone over. Lalla Rookh and Lady Dufferin were then put down. The heat was won in thirty-four minutes by Lalla Rookh, a wonderful puppy for her age—eleven months. Croxeth and Rob were then cast off. After a very long and tedious heat, occupying two hours and eight minutes, during which an immense amount of ground was gone over and very few birds were found, and the majority of these wild, Croxeth was awarded the heat. Both dogs did some excellent work for the opportunities they had. Croxeth and Lalla Rookh then came together to decide the winner of the special pointer prize, and were taken up at the expiration of seventeen minutes on account of its growing dark and the distance from home. During that time nothing further was done beyond Croxeth making a false point and Lalla Rookh a back. The birds are very scarce indeed, and the places in which they are found render good work very difficult.

It is a very grave question whether there will be birds enough to run the trials out on, as the starters in the Derby promise to be very large.—New York World.

Hard Biting Dogs.

A correspondent writes to us to know the best way to break a dog of the vicious habit of biting his birds when retrieving, and he further asks that as many other young sportsmen are equally benighted we will publish a reply.

Nearly every dog trainer has some favorite plan for the correction of this abuse. If the dog complained of be an old offender, with whom several plans have been found to fail, as a last resort he can be bitten. A good bit can easily be made of stout iron wire bent so that it has a flat base and a rounded arch at the top. Place the flat base of the arch in the dog's mouth and pull the rounded part over his ears. Then secure the arrangement by a piece of buckskin tied, not too tightly, around the throat. The wire in the mouth will not hurt if it is put behind the tushes.

A young dog can generally be cured of the vice by being set to retrieve a dead bird through which a number of blunt pieces of wire have been passed in different directions. After he has hurt his mouth a few times he will handle a dead bird as gingerly as though it were glass and he was afraid to break it. A little patience and close watching at the commencement of a dog's education will stop all desire to mouth or bite. In case both of the methods suggested fail with an old offender the best plan is to send him to the sausage factory.

Mr. Robinson of England, former owner of the well-known Laverack setter Aldershot, has purchased the dog from Mr. E. A. Herzberg of Brooklyn.

Coursing at Newark.

Last Sunday at Dugan's Newark Coursing Grounds a match was run off between C. Johnson's Delebut and W. Dugan's Lady Plaiice. The match was for \$50, best two courses in three. Mr. Sellery was selected as judge. The first course was won by Lady Plaiice. Delebut won the second. The third run resulted in a tie. During the first part of the fourth and final course it looked as if Delebut had it all her own way. She opened a wide gap from slips and made two more points before Lady Plaiice got her nose in. But in her eagerness in pressing the hare she got an ugly fall in a squirrel hole which stunned her and allowed Lady Plaiice to roll up points all alone. When Delebut did recover, the course was all but over. She managed to get in to help kill but Lady Plaiice won the course and match by one point. The losers took their defeat in good part but to show that they have not lost confidence in their dog they now offer to make the match over again for \$100 a side, the match to be run off at Merced next spring when the Pacific Coast Coursing club hold their spring meeting and to be judged by whoever is selected to judge for the club or any person who can be mutually agreed upon.

Delebut is a little stiff from her accident, but has sustained no serious injury.

Eastern Field Trials.

The annual field trials of the National Kennel Club began Dec. 4. For the All-Ages stakes Drew's American Dan beat Don't, winner of the Members' cup at the Eastern trials; Press beat Cavalier (pointer); Gladstone beat King Dash; Sue beat Baden Baden; Carrie J. beat Guldoroy. Peep o' Day beat Philus. In the second trial Starke beat Grouse (Gordon); Spot beat Bessie Lee.

The second day found the conditions very unfavorable. In the final heat, first round, Count Noble beat Biz. In the second round American Dan beat Gladso Draun, Sue beat Bess, Carrie J beat Startle, Peep o' Day beat Scot and Count Noble beat Abbie. In the third round American Dan beat Count Noble, Sue beat Carrie J, Peep o' Day beat Abbie. In the fourth round Peep o' Day beat American Dan. The latter was a very long and close beat.

LOW PRICES FOR DOGS.—On Saturday last, says an exchange, twenty sporting dogs belonging to Dr. H. S. Strickland were sold at the American Horse Exchange, New York. Few fanciers were present, and the prices were very low. Hugo, a well bred setter, two years old, well broke and of full pedigree, got no bid and was retired. Duke, a lemon and white setter, fifteen months old, was bought by Daniel Connelly for \$13; Jumbo, a setter, seven months old, was bought by Mr. Lansing for \$9; Rye, a blue Belton setter, one year old, brought \$5; Bessie, a lemon and white setter, eighteen months old, was sold to Mr. Preston for \$25; Lena, of the same color and age, was bought by Mr. Roach for \$9; Speck, a setter, eighteen months old, full pedigree, went to Mr. Preston for \$17; Juno, a black setter, fourteen months old, was sold to Mr. Stone for \$13, and twelve Irish setter pups, of full pedigree, went at prices varying between \$1 and \$3 each.

We publish this week a complete report of the Gilroy Field Trials whi was unfortunately received too late for insertion last week. The trials were a success though not as largely attended as was expected, but as yet the number of real sporting enthusiasts in California is small.

MATCH AT NEWARK.—On Sunday (to-morrow) a coursing match will be run at Newark between Chris Johnson's b d b Delebut and the be and w b Lady Plaiice. The match is for \$50 and will doubtless prove very interesting.

ATHLETICS.

Six-Day Pedestrianism.

The following sketch of the pedestrian performance of C. A. Harriman has been handed us for publication, and as will be learned from the perusal, there may be an effort made to inaugurate a "six-day go-as-you-please" contest. We were never favorably impressed with these long, dragging bouts, and think that they have an injurious effect on legitimate athletic sport. For a time there was a furore, and thousands indorsed them by their presence as spectators. They certainly proved that men had far greater powers of endurance than heretofore had been accredited, and eclipsed the old-time doings when the training was not so well understood. Further than this there was nothing gained, and we hope that the result of the last match in New York will be accepted as a token that their day has passed. Walking matches, fair "heel and toe," are interesting, but when the graceful action of O'Leary, and the easy, long stride of Harriman are replaced by the shambling dog trot of Weston or the slouching run of others who have gained distinction in this field there is nothing pleasing in the display:

An effort is being made by several of the leading pedestrians of this city to arrange a six-day contest for the Cotton diamond belt. A meeting was held last Monday evening at Harry Maynard's rooms, for the purpose of considering the matter, but nothing definite was decided upon. It is said that Mrs. Cotton wants \$500 for the belt and that those who are making overtures for it do not look favorably upon procuring it at that figure. C. A. Harriman, the champion pedestrian, who is now in this city, and who will remain until after the holidays, expresses a willingness to take part in a six-day go-as-you-please contest or a square heel and toe walk if such is held in this city before his departure.

C. A. Harriman, the renowned pedestrian, arrived in this city last week on his way to Australia. He is a young man, appearing to be about twenty-five or thirty years of age, of fine figure and a bright, vivacious talker. In a talk with the writer of this brief sketch he mentioned the principal events in which he has taken part: "In '79," he said, "I was in Baltimore. I entered there in a six-day go-as-you-please race against eight or nine competitors. I won the race. The next time I walked was at Providence, R. I., in the August following, against forty-two men in a seventy-five-hour go-as-you-please match. I walked it out and got about \$250. In October I was at Newark, N. J., and entered for a six-day heel-and-toe walk; I won first place, making 342 miles. In the spring of '80, Chicago, at the Bellevue, I was in a percentage race, seven days, twelve hours each day. Vint got in first in this and I was next. This proved greatly to my benefit finan-

cially. In the spring of '80 I won a fifty-hour race at Jamestown, N. Y., against twenty-two men. It was a go-as-you-please race. From Jamestown I went to Philadelphia and entered for a twelve-hour-a-day go-as-you-please match in the Industrial Art Hall. I got in fourth, those leading me being Albert, Hughes and Reading. In this race I got four prizes—the fourth money, the costume prize, awarded to the best dressed contestant, the trainer's scarf pin and the silver cup for covering the most miles in the last four hours. I then made arrangements for a walk in Cincinnati; the contest was in a tent and after I had completed 305 miles I was drowned out by the rain. I then had an easy walk in Syracuse in which I cleared about four hundred dollars. I walked against George Root in a fifty-consecutive-hour race.

From Syracuse I went to Cincinnati for a six-day, twelve-hours-a-day walk. John Shory took first, myself second, Krohn third and Tracy fourth. I went in a twelve-hour race next at Pawtucket. In the spring of '81 at the Exposition building, New York, I made 530 miles in 142 consecutive hours in a six-day heel-and-toe walk, beating all the records of the world for heel and toe walking. Tracy took second with 523 miles and Krohn made 520 miles. This was in May, 1881. George Littlewood has since beaten the time I made then. I walked a seventy-five-hour contest at the Aquarium, New York, next and won it. I then issued a challenge to the world, (this was in October of '81,) which was never accepted. I had \$1,000 on deposit until November the 7th, challenging any and all men to walk a go-as-you-please for two days or six days for from \$1,000 to \$5,000, the winner to take all the sweepstake money and gate money and in case the receipts were not sufficient the privilege would be given to take down my deposit to make good any deficiency. I did not get any one to take up my proposition. Walton, the plunger, backed me in my race in New York in the spring of '81. I did not come to California to walk and cannot say what I will do while I am here."

The Last Race of George and Myers.

The New York World gives the following account of the final race between George and Myers, on Thanksgiving Day:

Myers was the first to make his appearance and as he passed the grand stand on his way to the starting point he was greeted with boisterous applause and cries of "Lick him to-day, Lon!" Without paying any attention to this friendly advice he went to the starting-post, where he was shortly joined by George, whose appearance was a signal for another round of cheers. When the men met at the mark they cordially shook hands, and in answer to George's question Myrick replied: "Oh, I am pretty well to-day, thank you, how are you?" George responded: "Well, indeed, thank you; but the weather is not fine is it, I say?" A warning from the starter caused them to get ready on their mark at the start, which for the "three-quarter" is near the club house on the One Hundred and Tenth street side. George had the inside position. He was dressed in a blue jersey and black satin trunks, and looked decidedly in better health and trim than his dark, small antagonist, whose white silk uniform was in strange contrast to his swarthy complexion. At the crack of the pistol both men dashed away. George started away and made the pace astonishingly rapid. Time-keepers had been stationed at each "twelfth" of a mile, and as the men passed the first of these George's time was 19 4-5s., Myers being one yard behind and running so easily that his friends, who previously to the start were betting "even," now made the "little wonder" a favorite at five to four. When one-sixth of a mile had been passed George still led by a yard, the time being at this point 39 1/2 s. At the "quarter" George's time was 1:1 2-5, with Myers 1-5 of a second behind. Myers after passing this point closed up some of the gap, but just before reaching the third-of-a-mile post he had dropped back, the respective times being—George 4:22; Myers, 1:22 1/2. Going to the "five-twelfths" Myers made another spurt, and when they passed that post he was but two yards behind George, the latter's time being 1:42; Cries of "Myers wins easily," were now frequent and loud. The half-mile was done by George in 2:02 1/2, Myers being 1/2 s. behind. His fine style and easy carriage, coupled with his closeness to George, who was seemingly straining every nerve, led his friends to make renewed offers of bets that he would win. The 7-12 of a mile was done by George in 2:26, with Myers three yards behind. At this point Myers prepared to make his final effort. Eight-twelfths of a mile were done by George in 2:58 1-5. Meyers' time being 2:48 1/2. Immediately after passing that point Myers with a grand burst of speed reached George's shoulder and thus they ran for many yards, amid the cheers and cries of the crowd, who now seemed bereft of all reason and broke the ropes which separated them from the track, upon which they flocked, pushing and cheering, yet leaving sufficient room for the runners. Tom McEwan, who could not bear to see his favorite beaten, got by his side, and, waving his hat in the air, shouted words of encouragement in the ears of the now drooping champion. The men as they crossed the score were caught by willing arms, who aided them to their rooms, where, after a short repose, they emerged, seemingly none the worse for their severe race. George's time for the race was 3:10 1/2, and Meyers, though beaten but five yards, was timed in 3:13. George's time is now the best on record in this country, but is 2 1-10s slower than his English record for this distance. The track on which this race was run was soft and mddy.

At the Olympic Club meeting on Thanksgiving Day, the baseball game between the Redingtons and Olympics was won easily by the first named club, the Olympics, before the best audience of the season, becoming thoroughly demoralized early in the game. The club trophy is now on exhibition at 529 Market street. Bobby Robinson, of the University, won the 100-yards in 10 1/2, C. H. Slater second. Slater got a slow start and ran on the heaviest part of the track, but closed up rapidly on the finish, and is still confident that he can beat Bobby at that distance. The 880-yards handicap was a game struggle between V. C. Driffeld (O. A. C.) 40 yards, J. T. Gorevan (G. G. A. C.) 20 yards, and J. K. Lynch (O. A. C.) 35 yards, the finish being in the order named. Time, 2:11. The 220-yards handicap was another struggle between Slater and Robinson, both starting scratch. Slater was again the last to leave the scratch, but immediately set the pace, and in a few strides gained a commanding lead of Robinson. The bandicappers were nowhere, and Robinson's desperate spurt on the finish was useless, as Slater was watching him over his shoulder, and beat him out for first easily. Time, 24 1-5 seconds.

The Examiner says that it did not accuse McIntyre of running a job race with Davis, but in the same article acknowledges that he was named as the fraud, when it should have been Guerrero, and then immediately insinuates that McIntyre did run a job race, but that time was suppressed at the request of Davis. What's the spite?

YACHTING.

YACHTS AND REGISTRY LAWS.—It is probable that, as a result of the report of the Joint Congressional Committee, which recently met in this city, a change will be made in the registry laws of the United States, and that if there be any yachtmen who desire cutter, they will be able to buy them in England much cheaper than they can build them here. We presume that by taking off the lead keel, a thirty-ton cutter might be brought on the deck of a steamer, and those of a larger size can sail over. The experience of the next season will demonstrate whether such boats are best suited to the yachting needs of this country or not, and, as we have before remarked, there are enough of them now to speak for themselves. Much ink has been spilled and some little temper has been manifested by the cutter men because all Americans do not see the advantages of the cutter model as they do, and in the controversy the *Spirit* has remained neutral, with the exception that we have warned our friends against the extremely narrow type of British racing yachts that have been thus narrowed, not from choice, but from necessity. In all other respects we have had no particular partiality for one type of boat or another, not deeming it any of our business to dictate to gentlemen as to what their choice shall be, and only desirous that each shall have the boat that best suits him. We rejoiced in the Oriva's performance last season, although it falsified our predictions, and shall be extremely sorry to find ourselves mistaken next year in the performance of the Bedouin and Wenonah. Thus much for the cutter, as an introduction to the yachting season of 1882—the cutter season.—*Spirit*.

The New York Yacht Club, says the *Spirit*, has not heretofore done anything on Decoration Day, but if the project now on foot for a club-house takes shape, it, too, will probably have its Decoration Day sail, and we hope to see the time when the New York, Seawanhaka, Atlantic and Larchmont clubs will have together a scrub race on that day; no prizes, no time allowance, the boats classified by length only, and the combined fleets divided into about four classes. Here is a chance where all could meet on common ground, and with all the boats in apple-pie order, as they always are at this date, a most interesting race would result, making a course from Bay Ridge, around the Scotland light ship, and return. It would be very exciting. Next year the Atlantic club is to have additions of at least two fast schooners, and the New York club will probably have as many. The Seawanhaka has already some cutters that are to be troublesome next year, for, although the owners of both the Bedouin and Wenonah belong to the New York club, the proper home of this class of yacht is with the Seawanhaka Corinthians. The Larchmont club has some small craft that are flyers, and no doubt would be fitly represented, and an annual pageant, such as these combined fleets would make, would in a few years attract an outside attention such as the annual regatta of the New York Yacht club used to attract. We don't expect to see this just yet, but at any rate the suggestion is worth thinking about, and if it could be put in practice it would be a step in the direction of a National Yachting association, which is one of the things that must come sooner or later.

Clem Uhler, who used to own the Emerald and was one of the most enthusiastic members of the S. F. Y. C. has been on a 400-mile cruise in a little cutter-rigged yacht. He has written up his adventures in the *Forest and Stream* and seems to be one of the few who have been converted to the cutter. He confesses, however, that he would prefer the yawl if he had the choice, yet he thinks a keel boat the best.

It looks as if the next season would be a more lively one than that which has just passed. Last season was the dull-est we ever had, considering the number of yachts in commission. Too many people seemed to be pulling in different directions.

The little Marcia which was built by Jack Purvis and afterwards sold to Alex. Delmar, has been sold and shipped up to Vancouver's island. She was a fast little craft.

The worst part of the year for yachting is with us now. The days are short and there is no wind. Very few of the yachts are in commission.

Few of the yachtmen seem to go over to Saucelito compared with the number which used to frequent the place.

George Farmer has nearly completed a new plunger for Smith of Lake Merritt.

The Frolic has been up the Carquinez Straits for a few days.

The stevedores yacht is in commission and seems to work well.

Stone is working away on that little 40-ft. schooner.

Purvis will launch his little schooner in a few days.

Work is slowly progressing on the Spreckels yacht.

The Chispa is still in commission.

The Clara has not been laid up.

ROWING.

The reorganization of the Golden Gate senior crew has for some time been talked of in the club-house. The proposition which seems to be the most favored is to put Dennis Griffin, the shell rower, in the bow, give Charles Rogers forward waist, put Supervisor J. D. Griffin in the after waist (bis old oar in the barge) and John F. Walthour at stroke. The shell crew thus organized is a strong one and with careful training meantime would make the next contest for the BREEDER AND SPORTSMAN cup even more interesting than that on Thanksgiving Day.

The Golden City are considering the matter of procuring a four-oared shell either of paper or wood, but it is doubtful if they will obtain what they require unless they send East for it. The Alerts of Vallejo have a boat which the Brown crew think would suit them. Whether they will dispose of it or not at what the crew think a reasonable figure is yet unanswerable.

There are two sets of amateurs of game fowls. One looks only to beauty of plumage, etc., the other, careless of feather, scans closely those points that will tell in a fight.

The poulterer will find it necessary at every season in the case of fowls in confinement to give them a little animal food as a compensation for worms, grubs, etc.

FISH.

TICKLING TROUT.—Mr. Beecher told a pretty hard "fish story" to his people at the Plymouth prayer meeting one evening recently. He said that whenever his father went down to Guilford, Conn., to visit his wife's relatives, he used to think of nothing but finding a good place to catch trout. In a certain pool there was a particularly large trout, and for several years the old gentleman vainly tried to hook him. Finally, during one of his annual visits, he saw the old trout's fins sticking out of the water in a shady spot under the bank. The reverend angler bethought him that he had heard or read that fish could be tickled and captured with the hand. He softly slipped a hand into the water under the motionless fish and slightly tickled its belly with his finger tips. It shot a little distance off, but returned almost immediately, and Pere Beecher moved his hand lightly along his scales until approaching the gill he slipped his forefinger in and jerked the surprised trout high and dry upon the bank. Mr. Beecher told this story with such dramatic force, and so cleverly imitated the old gentleman peering into the pool and reaching his arm down into the water, that when he pulled it up a rustic of excitement was noticeable in the meeting.

A NEW FISH-TRAP.—The *Enterprise* says that an Idaho man has invented an apparatus on which is fastened a regular network of hooks. He catches trout whether or not they are in the humor to bite. He hooks them in the mouth, gills, tails and bellies, and brags that he can catch a ton a day with his machine. It seems to be an apparatus worthy of the attention of the Fish Commissioners. It is an apparatus that would be a real blessing to many of the fishermen along the Truckee and down about Pyramid lake. They would find it much safer than giant powder. Any person who will make use of such a contrivance as the one above mentioned ought to have lived in the Middle Ages when to destroy everything inferior in strength was man's principal object. The boast of the ability of the inventor to capture a ton of this beautiful game fish shows his desire so to do and such wanton destruction is inexcusable, even in one who sells to the market.

CATFISH AND EELS.—The *Tuscarora Times-Review* says: The catfish which were received from Fish Commissioner Parker about two years ago, and deposited in the waters of the Owyhee, it seems, deserted that stream and have taken up their residence in Bull Run creek, between the Old Peak ranch, now Dave Griffith's, and its junction with the Owyhee. In many places the water remains in holes or eddies to the depth of ten feet. Here the catfish make their home. Another species of fish caught this season in Bull Run is the eel. There has been to our knowledge no plant of that species made in these waters, and unless they came from the Columbia into the Snake, the Snake into the Owyhee and the Owyhee into Bull Run, the Darwin system of evolution has been verified, and the Bull Run eels have come from snakes.

DECIDED.—The case of People vs. Samuel Taylor of Marin county for violating one of the fish laws which has been dragged through all the courts has been decided. The Supreme Court has denied the petition for a writ of certiorari. Sammy will now have to pay his fine or go to jail.

Phil Cadue was out on Thanksgiving Day and caught 125 pounds off Yellow Bluff. He went out on the Saturday following and had good luck but did not get as many as he did the day previous.

A sea turtle weighing 800 pounds was recently captured in a weir off Cape Cod, the largest ever taken in those waters.

The Model Farmer and his Sons.

J. M. Stahl, in the *Ohio Farmer*, in an article on "Model Farmers," notes one of the peculiarities of the class as follows:

"The model farmer encourages the boys. A good many people wonder why so many boys leave the farm; the wonder is why so many stick to it. A farmer boy is treated in just the right way to make him dislike his occupation. He is given worn-out tools, and is expected to do a big day's work with them. He is expected to run all the errands, carry away the refuse vegetables from the house, turn the grindstone and slop the hogs while the men are resting at dinner. He is thanked in scoldings and paid in foul dealings. This picture is not overdrawn. Farmer boys have a long, hard row to hoe, and a dull, heavy, rusty hoe to do it with. The model farmer recognizes this fact and encourages his sons—and his daughters, too, for that matter. He gives the boys a few hogs or calves to feed, and does not pocket the money, either, when he sells them. We have known farmers frequently to do that, and it is the meanest thing they can be guilty of to give one of their children a motherless lamb or a runt pig, tell them it is their own and when they, by superior care, have made a good animal out of it, to sell it and pocket the proceeds. It is lying and cheating combined, and the model farmer does not do it. On the contrary, he lets the boys purchase with their money, and thus by safe bargains make a little money for themselves. And it is a fact worthy of note that his boys are good workers and till the parental acres when they become men. The model farmer is mighty good to the boys."

BICYCLING.

Thanksgiving Day, fortunately for those interested in out-door sports, proved to be pleasant, and the games at the grounds of the Olympic Athletic Club in Oakland were witnessed by a good number of spectators. The bicyclers were represented in two events, a one-mile race against time, and a one-mile scratch race. In the first event H. C. Finkler undertook to beat the Pacific Coast record, 3:15½, made by H. C. Eggers one year ago on the mile track at the Bay District Park. This he failed to do, partly from lack of condition, but principally on account of the heavy track, which had not dried out since the previous rains. His time for the full mile was 3:24½. The scratch race brought out the starters W. F. Fisher, G. R. Butler and Edwin Mohrig. At pistol fire Butler made a good start and took the lead, increasing it for the first two laps to about a dozen yards. In the next lap both Fisher and Mohrig drew up to him, and at the beginning of the fourth lap Fisher went to the front with a rush. The three kept close company during this lap, Butler making renewed efforts to again pass Fisher, lapping his wheel but not succeeding in heading him. Coming down the home-stretch in the last lap Butler made a final effort and drew up to within a yard or two of Fisher, who crossed the line in 3:33. Mohrig showed symptoms of tiring in the fourth lap and finally gave up about the middle of the fifth without finishing. It is only fair to say that owing to the previous unfavorable weather none of the riders had been in practice and they were consequently not in good condition.

ADVICE TO BICYCLISTS.—Wynter Blyth, medical officer of health for Marylebone, London, writes in the *Sanitary Record*: "I have studied the diets recorded as in use, and find that those who have done long journeys successfully have used that class of diet which science has shown most suitable for muscular exertion, viz.: one of a highly nitrogenized character, plenty of meat, eggs, and milk, with bread, but not much butter, and no alcohol. I have cycled for over fifty miles, taking frequent draughts of beer, and in these circumstances, although there has been no alcoholic effect, it has caused great physical depression. The experience of others is the same. However much it may stimulate for a little while, a period of well marked depression follows. I attribute this in part to the salts of potash which some beers contain, in part to injurious bitters, and in part to the alcohol. My own experience as to the best drink when on the road is most decidedly in favor of tea. Tea appears to rouse both the nervous and muscular system, with, so far as I can discover, no after depressing effect."

Two tricyclists, W. Bourdon and H. Martin, both of Bromley, England, left that town September 23, on a double tricycle, and rode to Land's End, arriving October 4, covering three hundred and sixty-five miles. Returning, at Penzance Mr. Martin's business necessitated his returning home by rail, and Mr. J. Snow, also of Bromley, took his place on the Sociable, and he and Mr. Bourdon completed the return journey, arriving the 14th, the whole route covering seven hundred and nineteen miles, being the longest "sociable" ride on record.

Vanity Fair says: "The chairman of the Faure Accumulator Company has been experimenting at Brighton in using electricity as a motor for tricycles, and with considerable success, the only drawback being the weight of the accumulator. This inordinate weight at present seems inseparable from the storage of electricity, owing to the lead plates employed. Get rid of this lead and find a suitable substitute, and there would seem to be scarcely any limit to the employment of electricity as a propellant for trains, omnibuses, cabs, boats and tricycles."

The *Boston Courier* says: "The president of the Women's Social Science Association of California, one object of which is the physical development of women and girls, has become greatly interested in the use of tricycles as a means of promoting health and strength, and is negotiating for the purchase of one for her own use. She expects good physical results from their daily use by the members of the association."

A reverend gentleman in Massachusetts of bicycling proclivities was recently favored by his parishioners with a donation party. Among the barrels of flour, potatoes and other useful articles, he found a new bicycle saddle, which he immediately proceeded to adjust and test, losing all interest for the time in the other presents.

It is said that the postmaster of Washington has asked to be allowed to purchase a number of tricycles for the use of carriers, claiming that at least one hour will be saved thereby in the collection and distribution of mail matter, and that collections can thus be made more frequently, and delayed to nearer the hour of dispatching the mails.

Several members of the S. F. Bicycling Club have made the run to San Jose recently, returning in one instance by the road on the eastern side of the bay to Oakland. They report the roads upon the western side somewhat rough and very heavy from repairs, but the eastern road as excellent.

Bicycling can hardly be said to be on the decline yet. It is stated that one bicycle firm has done business during the past year amounting to \$1,000,000.

Both the Oakland and S. F. Clubs have developed considerable artistic talent in amateur photography and members may often be seen perpetuating some of the beautiful scenery to be found upon many of their trips.

About 250 cycles are in use by the English government in the police and postal departments, although the number has been erroneously stated at a much higher figure—up among the thousands, in fact.

The Profits of Grape Culture.

Much has been said about the profits of grape growing, and some are inclined to doubt that they are sufficient to justify the very high values that lands have attained at St. Helena. The best argument we can present to such is the following list of crop values from lands in the vicinity of Pine station the present year, as furnished us by our wide-awake and intelligent correspondent at that place: Charles Wheeler, 30 acres, 235 tons, worth \$9,125, or over \$300 an acre. He picked from several Zinfandel vines two vineyard boxes; or about 90 pounds each, leaving a heavy second crop on the vine. He often filled three boxes from two vines of Zinfandel varieties. The yield, taken to the cellar, was eighteen tons to the acre, and Mr. Wheeler says that at least three tons per acre was left on account of frost. R. M. Wheeler, 12 acres of two-year-old vines, 47 tons, \$1,645. H. M. Pond, five acres, two-year-old vines, 15 tons, worth \$480. There are ten acres in the tract; but about half of it was set last year. I. J. Newkirk, 30 acres, two-year-old vines, 105 tons, worth \$3,000—all that the land cost two years ago. F. W. Loeber, 27 acres, 2,700 vines, some of them young. Over ten tons per acre, worth \$865. W. A. Field picked from three-year-old vines 40 pounds to the vine, or three vineyard boxes full from three vines, the same being the vines noted some time since; also at about the rate of twelve tons per acre for old vines. N. Sawyer, from eight acres, two, three and five-year-old vines, 45 tons, worth \$1,600. Martin Furstenfeld harvested 234 tons, worth \$4,155, from 24 to 26 acres. J. G. Norton harvested over 100 tons, worth nearly \$4,000. J. W. Williams harvested from 15 acres, 100 tons, valued at \$3,100. About a quarter of these are young vines, two and three years old. Captain William Peterson harvested from 35 acres, 210 tons, worth \$6,000. The captain says he might have picked 15 tons more, but thinks he got enough.—*St. Helena Star*.

One of Jack Campbell's Yarns.

The *Truckee Republican* tells this: No man ever lived in Sierra county who enjoyed a good story or a joke better than Jack Campbell. Two years ago, while he was keeping the Hot Spring Hotel, he got off the following yarn: J. Y. Johnson, Forest City went to the springs to rusticate.

"Any hunting around here?" asked Johnson the morning after his arrival, of Jack Campbell.

"Lots of it," replied mine host. "Plenty of ducks, geese, quail and rabbit."

"Lend me your gun," said Johnson; "guess I'll go out and kill a mess of duck."

Campbell went into the house and brought out an old bored-out musket, not an inch less than six feet long. Johnson looked incredulously at the thing a moment and inquired:

"Will it shoot?"

"Shoot! hell, yes; las' summer I was down in the medder, an' I saw a flock o' duck about seventy yards away. I raised up that 'ere gun an' took deadly aim an' blazed away. The pesky thing snapped. I looked down the barrel an' saw the charge comin', so quicker than lightning I took aim again an' killed six ducks. Fact—take suthin'?"

THE MIGRATION OF BIRDS.—Familiar as the migration of birds is to us, there is, perhaps, no question in zoology more obscure. The long flights they take, and the unerring certainty with which they wing their way between the most distant places, arriving and departing at the same period, year by year, are points in the history of birds of passage as mysterious as they are interesting. We know that most migrants fly after sundown, though many of them elect a moonlight night to cross the Mediterranean. But that their meteorological instinct is not unerring is proved by the fact that thousands are every year drowned in their flights over the Atlantic and other oceans. Northern Africa and Western Asia are chosen as winter quarters by most of them, and they may be noticed on their way thither to hang over towns at night, puzzled in spite of their experience, by the shifting lights of the streets and houses. The swallow and nightingale may sometimes be delayed by unexpected circumstances. Yet it is rarely that they arrive or depart many days sooner or later one year than another. Prof. Newton considered that were sea-fowl satellites, revolving round the earth, their arrival could hardly be more surely calculated by an astronomer. Foul weather or fair, heat or cold, the puffs repair to some of their stations punctually on a given day, as if their movements were regulated by clock-work. The swiftness of flight which characterizes most birds enables them to cover a vast space in a brief time. The common black swift can fly 276 miles an hour—a speed which, if it could be maintained for less than half a day, would carry the bird from its winter to its summer quarters. The large purple swift of America is capable of even greater speed on the wing.

The chimney swallow is slower, ninety miles per hour being the limit of its power; but the passenger pigeon of the United States can accomplish a journey of 1,000 miles between sunrise and sunset.

THE PLUM WEEVIL.—A. Cadwell informs us that an old friend from Illinois who recently visited him here gave the following novel but simple remedy for the curculio or plum weevil. A lady neighbor of the Illinois farmer had tried it for two years with most satisfactory results. She boiled corn cobs in sweetened water and tied them up end-wise around the body of the tree. The insect lived on the sweetened matter in the cob and deposited its eggs there; the result was a full crop of fruit. Last year she tried it again and informed her neighbors of the success of her experiment. They too tried it and also succeeded. Now if the fruit raisers of Illinois after twenty years of experiment have been able with this simple remedy of sweetened cobs to check the ravages of the curculio, may it not be possible with some just as simple remedy to protect our orchards in California against the codling moth? Mr. Cadwell thinks the State should offer a liberal reward for a remedy against this fruit pest, and if the State can't do it, he suggests that the fruit raisers make up a purse for that purpose, and as an inducement offers fifty dollars for his part.—*Petaluma Courier*.

Market Report.

FLOUR.—We quote: Best City Extra, \$5 37½ to \$5 50; Superior, \$4 50 to \$4 75; Interior Extra, \$4 75 to \$5 25; Interior Superior, \$3 65 to \$4 10.

WHEAT.—Considerable business transacted during the last week in the Produce Exchange. Recent sales of No. 1 White December brought \$1 73½ to 1 73¾. Same quality January, \$1 73½. Spot lots, No. 1, \$1 70 to \$1 71½.

BARLEY.—Market quiet. Recent sales No. 1 feed January, \$1 43½ to 1 43¾; Brewing, \$1 45 to \$1 55 per cbl.

OATS.—Fair feed, \$1 70 to \$1 75; Good, \$1 75 to \$1 80; Choice, \$1 85 to \$1 90 per cbl. Milling \$1 95 to \$2 10 cbl.

RYE.—Quotable at \$2 12½ to \$2 25 for No. 1, and \$1 75 to \$1 90 per cbl for No. 2 grade.

FEED.—Ground Barley, 31½ ton; Cracked Corn, \$37½ ton; Shorts, \$20½ ton; Oileak meal the oil works sell to the trade at \$32½ to \$33½ ton, less the usual discount. Middlings, \$27½ to \$28½ ton for lots at the mill.

HAY.—Alfalfa, \$12 to \$14 50; Wheat \$16 50 to \$17 50; Wild oat, \$15 to \$16; Mixed \$12 to \$16 per ton.

PROVISIONS.—Eastern Hams, 19½ to 21c; California Hams, 16½ to 17c for plain, 16½ to 17c for sugar-cured canvased; Eastern Breakfast Bacon, 16½ to 17c; California Smoked Bacon 15½ to 16c for heavy and medium, and 16½ to 16c for light and extra light; Clear Sides, 16½ to 16c; Pork, \$21 50 to \$22 for Extra Prime, \$24 to \$25 for Prime Mess, \$25 to \$25 50 for Mess, \$27 for clear and \$28 to \$28 50 for extra clear; Pigs' Feet, \$16 to \$18 per bbl; Mess beef, \$16, for bbls and \$8 50 for hf bbls; Extra Mess Beef, \$17 for bbls and \$8 50 for hf bbls; Family Beef, \$18 to \$18 50 for bbls; California Smoked Beef, 13½ to 14c per lb.

FRUIT.—We quote: Apples, 30 to 50c for common and 75c to \$1 per bx for good; Pears, 50c to 125 per bx. Figs, 60c to \$1 per bx; Grapes, 75c to \$1 per box; Lemons, \$6 to \$7 per box for Sicily and \$5 to \$6 for Malaga; California Lemons, \$2 50 per box; Limes, \$3 to \$6 50 per box for Mexican; Bananas, \$2 to \$3 50 per bunch; Mexican Oranges \$22 50 to \$25 per thousand; California \$2 25 to \$2 75 per box; New crop Western Cranberries are offering at \$15 to \$17 per bbl.

VEGETABLES.—We quote: Marrowfat Squash, \$8 to \$10 per ton; Carrots, 30c; Turnips, 75c to \$1; Cauliflower, 75c to \$1 per dozen; Cabbage, 50c to 75c per cbl; Garlic, 4c per lb; Green Peas, 7 to 8c per lb; Green Peppers, 60c to \$1 per box; Tomatoes, 75c per box; Celery, 50c per doz; Mushrooms, 10 to 12c per lb; Okra, 75c to 1 doz; Dried Okra, 18c; Dry Peppers, 15 to 18c per lb.

POTATOES.—River Red, 45 to 55c; Early Rose, 60c to 90c; Garnet Chile, \$1 to \$1 10; Humboldt, 90c to \$1; Tomatoes and Petaluma, 87c to \$1; Peerless \$1.

ONIONS.—Quotable at 60 to 70c for good and 25 to 40 for sack for poor.

BEANS.—Bayos \$3 75 to \$4; Butter, \$3 to \$3 10 for small and \$3 20 to \$3 30 for large; Lima, \$3 75 to \$4; Pea, \$3 20 to \$3 30; Pink, \$2 75 to \$3; Red, \$2 75 to \$3; small White, \$3 20 to \$3 30; large White, \$2 75 to \$3 per cbl.

BUTTER.—We quote jobbing lots: Fancy, 35c; choice, 30 to 32½; fair to good, 26 to 28c; inferior lots from country stores, 22 to 25c; Brin, 27 to 28c for good to choice, and 25 to 26c for ordinary; pickled roll, 25 to 27½; Eastern, 18 to 22c per lb.

CHEESE.—Fairly steady. California, 14 to 15c for choice; 11 to 13 for fair to good; do, factory, in boxes, \$15 to 16; Eastern, 16 to 17c; Western, 8 to 12c per lb.

EGGS.—California choice, 40 to 42c; Eastern, 30 to 35c. Lime, 27 to 30c per doz.

POULTRY.—Live Turkeys, gobblers, 15 to 17c; do Hens, 15 to 17c; do dressed, 16 to 18c; Roosters, \$5 50 to \$6 for old and \$6 to \$7 for young; Hens \$6 to \$7 50; Broilers, \$5 to \$5 50, according to size; Ducks \$6 50 to \$8 50 per dozen; Geese, \$1 50 to \$2 per pair.

GAME.—Prices unchanged. Quail, \$1 a per dozen; Mallard Ducks, \$3 50 to \$4; Sprigs, \$2 25 to \$2 50; Canvasback, \$3 50 to \$4; Brandt, \$1 50 to \$2; Gray Geese \$2 50 to \$3 50; White Geese, \$1 25 to \$1 50; Honkers, \$5 to \$6; Snipe, \$1 25 to \$1 50 for English and 50 to 75c for common; Teal, \$1 to \$1 25; Wildgeon, \$1 25 to \$1 50; Hare, \$1 75 to \$2 25; Rabbits, \$1 25 to \$1 75.

WOOL.—Trade limited to small local orders. We quote fall: San Joaquin and coast, 10 to 12c; San Joaquin and coast Lanth, good, 11 to 12c; Northern Fall, free, 15 to 20c; Northern Fall, defective, 11 to 15c; Northern fall, Lamb, 15 to 20c; Free Mountain, 13 to 16c. **HIDES AND SKINS.**—Dry hides, usual selection, 10 to 20c per lb; culls one third less, and Mexican hides 1c per lb less. Dry Kip, 20c; Dry Calf, 21 to 22c; Salted Steers, over 55 lbs, 11c per lb; Steers and Cows, medium, 10c; light do, 9c; Salted Kip, 15 to 30 lbs, 11c; Salted Calf, 14 to 15c per lb; Dairy Calf 70 to 80c each; Sheep Skins, 25 to 30c for Shearings; 30 to 50c for short, 60 to 90c for medium, and \$1 to \$1 35 apiece for long wool and wool skins. Butchertown Green Skins bring higher prices.

TALLOW.—Quotable at 9 to 9½c per lb for rendered and 11½ to 12c for refined, both in shipping order.

MEATS.—Following are rates for whole carcasses from slaughterers to dealers:

BEEF.—Prime, 8½ to 9c; medium grade, 6½ to 7c; inferior, 5½ to 6c per lb.

MUTTON.—Wethers are quotable at 4 to 4½c and Ewes at 4½ to 5c per lb, according to quality.

LAMB.—Quotable at 6 to 7c per lb.

PORK.—Live Hogs, 6½ to 6¾c for hard and 6¼ to 6½c for soft; dressed do 9½ to 10c per lb for hard grain hogs.

A new paper from the Pacific Coast makes its appearance here, the *San Francisco Breeder and Sportsman*, the first number of which was issued July 1st. It is well got up and printed, and, although taking general notice of sporting matters, is devoted largely to breeding and trotting interests. The Toronto correspondent of the *BREEDER* is Mr. James Lang, who is well qualified to attend to its interests. —Toronto Mail.

Woonsocket Rubber Co.'s Agency.

IMPROVED HORSE CLOTHING.

Secured by Letters Patent ISSUED MAY 27, 1879. REISSUED MAR. 29, 1881.

The above cut represents the body-piece, the patent also covering the improvements in the hood. The following are the claims granted:

1. An improved blanket or covering, consisting of the body-piece A, flap C, and the extension B, formed or united together, so as to cover the body and legs of the animal, substantially as herein described.
2. The blanket or covering A, having the flap C, and the extensions B, to fit the fore and hind legs of the animal, front fastenings F G, and the permanent straps or bands E, substantially as and for the purpose herein described.
3. The blanket or covering A, with its extensions B, permanent securing bands E, and the front fastenings F G, in combination with the elastic neck-extension H, substantially as and for the purpose herein described.
4. The blanket A and hood J, in combination with the elastic connecting-strip I, substantially as described, and for the purpose set forth.
5. The close-fitting hood J, having the elastic band L beneath the jaws, so that they may be allowed to move without disturbing the fit, and adapted to be secured to the cover by means of straps, substantially as herein described.
6. The improvement in covering-blankets for animals, consisting of the blanket A, having the flap C, and permanent straps or bands fixed to it to secure it around the body, whereby the use of loose surcingles is avoided, substantially as herein described.

The right to make clothing in the United States will be sold on a royalty. Apply to the patentee,

JOS. CAIRN SIMPSON,

SAN FRANCISCO, CAL.

Ticket Offices.—Passenger Depot, Townsend street, and No. 2 New Montgomery street, Palace Hotel, A. C. BASSETT, H. R. JUDAH, Superintendent, Asst. Pass. & Tkt. Agt.

S. P. Atlantic Express Train via Los Angeles, Yuma, etc., leaves San Francisco daily via Oakland ferry, foot of Market street, at 9:30 A. M.

TO
Sportsmen & Pleasure-Seekers.
THE
SOUTHERN PACIFIC R. R. CO.

RESPECTFULLY CALLS ATTENTION TO THE
SUPERIOR FACILITIES

AFFORDED BY THEIR LINE FOR REACHING
with speed and comfort the best places in the State for

Sea Bathing, Shooting and Fishing.

TRAINS LEAVE SAN FRANCISCO DAILY FOR

MONTEREY,
THE MOST CHARMING
Summer and Winter Resort of the
Pacific Coast,

with its beautiful Groves and delightful Drives, Trout in abundance can be obtained from the several streams in the vicinity of Monterey, and the best shooting may be had in season.

THE BAY OF MONTEREY

Is noted for the extent and variety of fish which abound in its waters, notably Salmon, Rock Cod, Baracuda, Pompano, Spanish Mackerel, and Flounder. The above-mentioned attractions, in connection with the low rates of fare, rapid transit, and the superior accommodations furnished at the "HOTEL DEL MONTE," have made Monterey a paradise for sportsmen.

THE BATHING ESTABLISHMENT
OF THE

"HOTEL DEL MONTE,"

IS UNSURPASSED.

A SPACIOUS SWIMMING TANK

(150 x 50 feet)

FOR WARM SALT WATER, PLUNGE AND SWIMMING BATHS.

ELEGANT ROOMS

For Individual Baths with DOUCHE and SHOWER facilities.

MAGNIFICENT BEACH

Of pure white sand for SURF BATHING, Etc., Etc.

THE FAVORITE ROUTE to those well-known

Watering Places,

APTOS, SOQUEL AND SANTA CRUZ,

IS VIA THE

Southern Pacific Railroad,
(Broad Gauge), and the

SANTA CRUZ RAILROAD.

At PAJARO, the SANTA CRUZ R. R. connects daily with Trains of the S. P. R. R.

The S. P. R. R. runs through the counties of San Mateo, Santa Clara, San Benito, Santa Cruz and Monterey, in each of which game abounds in great variety. Notably

Quail, Pigeon, Snipe, Duck, Geese, Deer and Bear.

Lakes PILARCITOS and SAN ANDREAS are reached by this line. Stages connect with trains daily at San Mateo for those well-known Retreats, PURISIMA, SAN GREGORIO and PESCADERO. We would particularly call attention to the unlimited extent of range at and about SAN BRUNO and McMAHON'S for RIFLE PRACTICE.

These resorts are but a short distance from San Francisco and offer special inducements to the lovers of this manly sport.

SPECIAL NOTICE.

Sportsmen and others presenting Passage Tickets of any description issued by this Company will be entitled to

FREE TRANSPORTATION OF THEIR DOGS

when carried in Baggage Cars and put in charge of Train Baggage-men. Train Baggage-men are instructed to issue CHECKS for all dogs received in Baggage Cars.

In order to guard against accidents to Dogs while in transit, it is necessary that they be provided with COLLAR AND CHAIN. Guns and Fishing Tackle checked and carried free of charge. Guns taken apart and securely packed in wood or leather cases may be taken in Passenger Cars.

TICKET OFFICES.—Passenger Depot, Townsend street, and No. 2 New Montgomery street, Palace Hotel, A. C. BASSETT, H. R. JUDAH, Superintendent, Asst. Pass. and Tkt Agt.

S. P. Atlantic Express Train via Los Angeles, Yuma, etc., leaves San Francisco daily via Oakland Ferry, foot of Market Street, at 9:30 A. M.

J. O'KANE, MANUFACTURER AND IMPORTER OF HARNESS, SADDLES, BLANKETS, HARNESS, SADDLES, BLANKETS, WHIPS, BOOTS, ETC.

767 Market Street, San Francisco.

SPECIAL ATTENTION given to the manufacture of "boots" of all kinds for horses. Can refer to all the principal trainers and horsemen on the Pacific Coast.

N. B.—My acknowledged superiority in this branch of business is largely due to careful observation and the valuable suggestions of the most skillful turnmen of the United States, the benefits of which revert to the public in the shape of a GENUINE WELL-FITTING ARTICLE. Sole agent for Dr. A. H. Dixon's Condition Powders and for Makinney's patent "Eureka" and "Eclipse" Toe Weights. Repairing done with neatness and dispatch. Has always on hand the finest assortment of English ladies' and gentlemen's saddles, bridles, whips, spurs, bits and 2½-lb race saddles.

Guards Against Concussion.

In all animals which have to progress with any degree of celerity on pedal extremities, nature has provided guards against the injurious effects of concussion. In considering the proper manner of keeping effective the natural provision in the foot of the horse, a brief comparison with other quadrupeds will not be out of place. In all are contrivances, admirable and complete, in a state of nature, for the intended uses, and valuable lessons will reward the investigator in this department of animal economy. In former papers I have alluded to the foot of the greyhound, and now the antitheton of that fleet courser will come under review. There could scarcely be two animals selected which are more dissimilar than the greyhound and elephant—the former a type of grace, agility, lightness, the other massive in its hugeness—so ponderous as to awaken a feeling of awe in a person who has not been accustomed to seeing them.

The skeleton of the greyhound differs from that of the horse, in there being a sharper angle between the shoulder-blade (scapula) and the bone of the upper arm (humerus). From the elbow to the knee is far longer in proportion in the dog, and the cannon, or metacarpals, correspondingly shorter. In place of the lower pastern shuttle navicular, or bone, and the coffin bone, the dog has digits similar to those of the human hand, and these are in nearly a horizontal position. The spring of these digits, and the cushion of the sole, together with the angle of the scapula and humerus, are effective guards against the jar which follows the striking the earth after the bound. I do not intend to go into an analysis of the stride and action of the greyhound until I have studied the last series of photographs taken at Palo Alto. That it will vary from that of the horse, I feel confident, from the configuration being so different; but without that light there would be just as much liability to error as there has been in regard to the action of the horse in a fast gallop. More so, as there is fully as much speed, with quicker movements, so that the brain is still more troubled to retain the picture which is yet more transitory. For the following account of the elephant we are indebted to the *Asian*, a newspaper published in Calcutta, India, and as a chronicle of "sport, shikar, the turf, garden, tea, indigo, whist, chess, etc.," full of interesting matter. Published in a country where the elephant is utilized, dependence can be placed on its accuracy, particularly as the author, R. A. Sterudale, F.R.G.S., has been a resident of India long enough to give him an intimate knowledge of the subject. As it is only a small portion of the essay which we have pirated, and bearing as it does so intimately on the topic under consideration; and then, again, being so far away, the acknowledged capture may be pardoned:

The elephant has seven cervical vertebrae, the atlas much resembling the human form; of the thoracic and lumbar vertebrae the number is twenty-three, of which nineteen or twenty bear ribs; the caudal vertebrae are thirty-one, of a simple character, without chevron bones.

The pelvis is peculiar in some points, such as the form of the ileum, and the arrangement of its surfaces resembling the human pelvis.

The limbs in the skeleton of the elephant are disposed in a manner differing from most other mammalia. The humerus is remarkable for the great development of the supinator ridge. "The ulna and radius are quite distinct and permanently crossed; the upper end of the latter is small, while the ulna not only contributes the principal part of the articular surface for the humerus but has its lower end actually larger than that of the radius—a condition almost unique among mammals."—(Prof. Flower.)

On looking at the skeleton of the elephant one of the first things that strike the student of comparative anatomy is the perpendicular column of the limbs; in all other animals the bones composing these supports are set at certain angles, by which a direct shock in the action of galloping and leaping is

avoided. Take the skeleton of a horse and you will observe that the scapula and humerus are set almost at right angles with each other. It is so in most other animals; but in the elephant, which requires greater solidity and columnar strength, it not being given to bounding about, and having enormous bulk to be supported, the scapula, humerus, ulna and radius are almost in a perpendicular line. Owing to this rigid formation the elephant cannot spring. No greater hoax was ever perpetrated on the public than that in one of our illustrated papers which gave a picture of an elephant hurdle race. Mr. Sanderson, in his most interesting book, says: "He is physically incapable of making the smallest spring, either in vertical height or horizontal distance. Thus a trench seven feet wide is impassable to an elephant, though the step of a large one in full stride is about six and a half feet."

The hind limbs are also peculiarly formed and bear some resemblance to the arrangement of the human bones, and in these the same perpendicular disposition is to be observed; the pelvis is set nearly vertically to the vertebral column, and the femur and tibia are in almost a direct line. The fibula, or small bone of the leg, which is subject to great variation amongst animals (it being merely rudimentary in the horse, for instance), is distinct in the elephant, and is considerably enlarged at the lower end. The tarsal bones are short, and the digits have the usual number of phalanges, the ungual, or nail-bearing one, being small and rounded.

Another thing that strikes every one is the noiseless tread of this huge beast. To describe the mechanism of the foot of the elephant concisely and simply, I am going to give a few extracts from the observations of Professor W. Boyd Dawkins and Messrs. Oakley, Miall and Greenwood: "It stands on the ends of its five toes, each of which is terminated by comparatively small hoofs, and the heel bone is a little distance from the ground. Beneath comes the wonderful cushion composed of membranes, fat, nerves and blood-vessels, besides muscles, which constitutes the sole of the foot"—(W. B. D. and H. O.)—of the foot as a whole, and this remark applies to both fore and hind extremities, the separate mobility of the parts is greater than would be suspected from an external inspection, and much greater than in most ungulates. The palmar and plantar soles, though thick and tough, are not rigid boxes like hoofs, but may be made to bend, even by human fingers. The large development of muscles acting upon the capus and tarsus, and the separate existence of flexors and extensors of individual digits, is further proof that the elephant's foot is far from being a solid, unalterable mass. There are, as has been pointed out, tendinous or ligamentous attachments, which restrain the independent action of some of these muscles, but anatomical examinations would lead us to suppose that the living animal could at all events accurately direct any part of the circumference of the foot by itself on the ground. The metacarpal and metatarsal bones form a considerable angle with the surface of the sole, while the digits, when supporting the weight of the body, are nearly horizontal.—(M. and G.) This formation would naturally give elasticity to the foot, and, with the soft cushion spoken of by Professor Dawkins, would account for the noiselessness of the elephant's tread.

On one occasion, a friend and myself marched our elephant up to a sleeping tiger without disturbing the latter's slumbers.

It is a curious fact that twice round an elephant's foot is his height; it may be an inch one way or the other, but still sufficiently near to make an estimate.

It is evident that there must be provided something more than is found in the foot of the dog and the horse to counteract the force of the immense weight sustained by the massive, perpendicular columns. The cushion composed of the tissues the best adapted to give softness and elasticity, is spread out to an immense size, to increase its effectiveness. "Twice round" the foot of a horse would lack several inches of reaching the elbow; and in a majority of thoroughbreds, the proportion would be nearly as one to five in measuring the height. It is also evident that the smaller foot is one of the elements of speed; and to prove this, it is only necessary to compare that of the draft horse with the pedals of the racer. The foot of the dog is much larger in comparison with the size, especially the weight, and hence a softer cushion is admissible. To withstand the increased attrition, the material must be harder, and in lieu of the indurated sole of the foot of the dog, there is the still firmer frog. But as has been partially explained heretofore, the frog is a reinforcement, aiding the parts which have stood the hardest shock of the battle. The first charge has been met with the wall, and the forcing

the wall apart, made possible by the commissures, gives the frog the opportunity to play its part. It is astonishing that this should be so persistently ignored, when all but one crazy theorist, and, perhaps, a few of his disciples, admit the importance of allowing the frog to perform the part Nature intended.

A general who would shut up his reserves in a space where there could not be a chance for the least exercise; who left them there until the muscles were wasted away and the nervous force entirely lost; who went into an engagement in which he was defeated entirely from neglecting this important part of his command, offers a parallel to those who still cling to the old-time absurdities. Ignoring the functions of the frog is not the only injury which follows the common system of shoeing. The spreading of the heel is stopped, and both of the pedal guards against concussion are nullified. That the spring which is afforded by the spreading of the "quarters" is of vast importance I am well satisfied, and also that it is nearly, if not quite, as serviceable in keeping the foot sound, as anything in the mechanism of the foot, and all the contrivances to palliate the evils of a full shoe are nearly worthless.

Where the writer lived when a boy, oxen did the largest proportion of the work of the farm. It was a hilly country, heavily timbered, rocky in many places, and all the soil was nearly covered with stones. In the winter time, shoes with sharp calkins were a necessity to keep the animal from falling down on the ice-covered roads. Those which were used much in the roads in the summer needed a guard to protect the thin horn. There were two shoes on each foot—the toe portion being wide, the heel narrowed to a width of scarcely half an inch. They were fastened with very small nails, and the shoer of the ox certainly exhibited far more sense than he did when the horse was the subject. To have followed the plan pursued with the latter, he should have made one in place of two shoes for each foot, and in lieu of the narrow, thin heel, put iron enough in it to raise the pad so it could never touch the ground. He could see the importance of not interfering with the cleft in the toe; the fissures in the heel of the horse were completely overlooked, and the palpable object entirely unheeded. By putting a round shoe on the cloven foot of the ox, securely nailing it to as to completely bind both portions together, there would be a proper analogy in the systems, and the ox crippled, as well as his co-laborer. —*Advance Sheets Tips and Toe-Weights.*

Large Shipment of Stock.

TURF AND TRACK.

New York Blue Laws.

The New York *World* a short time ago, before the law came into force, published the following showing to what straits it would lead if literally enforced. Now that the police force has been diligent in prosecuting offenders there is scarcely a doubt that the obnoxious features will be repealed soon after the legislature is convened.

The bigots appear to have gone completely daft in their efforts to resuscitate the laws of a couple of centuries ago, and, if there was no balance wheel in the shape of the good sense of the people who are willing to wait for a legislative correction of the evil, would precipitate the country into revolution:

Under the Penal Code, which will become the law of the state of New York on December 1, it may become virtually impossible to legally race, either on the road or on inclosed tracks. Although racing under "special laws" is recognized in one section of the code, it will be impossible to race on any of the principal race-tracks in this state if the provisions of section 147 are enforced. The section reads as follows:

"A person concerned in any racing, running or other trial of speed between horses or other animals, within one mile of the place where a court is actually sitting, is guilty of misdemeanor."

With this section enforced it is possible to prevent any racing at Jerome Park, Sheepshead Bay, Saratoga or at any of the great trotting tracks at Buffalo, Rochester, Utica or Poughkeepsie, for even if there is not a court or court-house within a mile of any of the tracks named, police magistrates or justices of the peace can open such a court if they so choose. Even the trials of speed between private teams on the up-town avenues of this city may be brought within the provisions of the above section. Even admitting that such "trials of speed" are not meant to be covered by the above section, they certainly cannot well escape the scoop-net conditions of section 352, as follows:

"All racing or trial of speed between horses or other animals for any bet, stake or reward, except such as is allowed by special laws, is a public nuisance, and every person acting or aiding therein or making or being interested in any such bet, stake or reward is guilty of a misdemeanor, and, in addition to the penalty prescribed therefor, he forfeits to the people of this state all title or interest in any animal used with his privity in such race or trial of speed and in any sum of money or other property betted or staked upon the result thereof."

Under the above condition it will be impossible for the members of the Gentlemen's Driving Association to enjoy their afternoon "brushes" on the roads leading to the Driving Park, for if the stakes should amount to only the usual "bottle," or, as on special occasions, "a basket," they are liable to have their horses forfeited to the State (because they do not race "under special laws") and are liable besides to imprisonment in a penitentiary or county jail for not more than a year or to a fine of not more than \$500, or both. From all of this it will be seen that, while "special laws" may allow trotting at the Driving Park, yet if there is a "court actually sitting" within one mile, then all engaged are guilty of misdemeanor.

The code is as severe on betting, especially in the matter of holding stakes, and it will be virtually impossible for any one having any self respect and any respect for the laws of the State to hold the stakes for a match, be it running, trotting, or even a yacht or boat race. As to betting between individuals, the act in itself is a misdemeanor, even if it is done without recording the bet in any book or making any written evidence of the same, which is made as much a crime as the selling of pools or the making of a book, as will be seen by reading the following section:

"Section 351. A person who keeps any room, shed, tenement, tent, booth or building or any part thereof, or who occupies any place upon any public or private grounds within this State, with books, apparatus or paraphernalia, for the purpose of recording or registering bets of wagers or selling pools, and any person who records or registers bets or wagers or sells pools upon the result of any trial or contest of skill, speed or power of endurance of man or beast, or upon the result of any political nomination, appointment or election, or being the owner, lessee or occupant of any room, shed, tenement, tent, booth, building or part thereof, knowingly permits the same to be used or occupied for any of these purposes, or therein keeps, exhibits or employs any device or apparatus for the purpose of recording or registering such bets or wagers or the selling of such pools, or becomes the custodian or depository for hire or reward of any money, property or thing of value staked, wagered or pledged upon any such result, is punishable by imprisonment for one year or by fine not exceeding \$2,000, or both."

The adoption of the above laws and their enforcement produces a vast difference of opinion. The present law against "pool-selling," which was passed by the Legislature in 1877, is enforced only in the city and county of New York, while at all other racing centers it is considered "dead" and no efforts are made to enforce it. What will be done with the new code time will show, but it is safe to say that outside of New York City the above proscriptive laws will not be enforced, and, as heretofore, no one will more willfully violate them than many of the legislators who voted for them, saying, as they have, heretofore, that they voted for the code knowing that the laws against betting or racing would not be enforced in their "destricts." As to the city of New York, they say that the law ought to be enforced, and that then those who want to bet will go elsewhere, or, in other words, they will go into the outside "destricts." But it is to be hoped that when the new Legislature meets in January, while it may not wish to repeal the above laws, it will so modify them as to exempt the regular chartered organizations from the specially obnoxious provisions.

STOCKTON, Dec. 11, 1882.

EDITOR BREEDER AND SPORTSMAN, Dear Sir: The Board of Directors of the San Joaquin Valley Agricultural Association held their annual meeting this afternoon, and named the 20th to the 24th inclusive of September as the time for holding their next fair. They also decided to have their yearling and two-year-old State trotting stakes close Feb. 1st, '83. Due notice relative to the same will be given. Our fair for 1882 proved successful, the net earnings being 4,000.

Respectfully, FRED ARNOLD.

MATCH RACE.—Sage Brush Sammy and Red Jacket have been matched to run a half-mile dash for \$1,000 a side, race to come off at Prineville on the 5th of May next.—*Rural Spirit*.

THE QUEEN OF THE TURF.

She Will not do for her Millionaire Owner
What She Will for His Trainer.

The queen of the turf has returned to her old quarters at Chester Park. Again she occupies the spacious apartment that is adorned with the card in the shape of a horse shoe, once divided between her and St. Julien, at Rochester, when they made the record of 2:11½, and afterwards, reunited into one insignia of honor, when they made the record of 2:10½, the same season, at Chicago. Although she has lowered the record only a fraction of the second, yet no other horse has been able to win the trophy from her. Still, the performances of Clingstone and Trinket and Black Cloud and Jerome Eddy and a host of others who have trotted in rapid succession low down into the teens, have apparently threatened to eclipse her time at no distant day. But threatening to equal or surpass her record is far from the actual performance. St. Julien has made no respectable effort in that way for the past year, and now he has gone to the life-restoring climate of the Pacific slope, to recover his enfeebled energies. Clingstone and Edwin Thorne and Black Cloud may train on next year, and approach still nearer the charmed record, but the probabilities are that they will become disabed in the effort, before they accomplish the feat. They have all been trotting longer, have received the grand preparations more frequently, and have appeared in prime form in more campaigns than Maud S ever profited by, before she ever came out, comparatively as a novice, to show the turf community trotting speed that surpassed the sanguine predictions of the most enthusiastic prophets. It is very fortunate in the career of Maud S that she has enjoyed alternate years of retirement from the turf. After her unequalled performance of 2:17½, in her four-year-old form, she was generously wintered, her complaining limbs severely blistered, and then given to the charge of Carl Burr to handle the succeeding season. With him she did nothing. Mr. Vanderbilt urged him to trot her in the Circuit, but for prudential reasons he declined. Whether pressing engagements with other patrons, or incapability to drive the mare up to her record speed, was the actual objection, one thing is certain, that when she was returned to Mr. Bair, in the fall, she pulled and fought on the bit, as if all the high-mettled determination she had shown in colthood to hattle against any attempt to curb her imperious spirit by the mere application of brute force, had been again aroused. After months of gentle caressing, almost human, womanly affection to a petted child, Mr. Bair succeeded in coaxing the fire from her flaming eyes and nostrils, and is persuading her to move again up to her marvelous speed, with her smooth, steady, evenly-balanced stroke that to all educated horsemen has been regarded as the type of perfect trotting action. With this victory over the unruly passions of her nature, Mr. Bair lowered her great record the fraction of a second, and in an actual race showed the fastest three heats in succession ever trotted in public or private on a mile course. Again her princely owner sent for her to minister to his pride and pleasure as a road horse in Gotham. Every horseman who knew the mare and the man was satisfied the experiment would prove a signal failure. Mr. Vanderbilt can manipulate men with imperious *hauteur*, but he can no more successfully apply the same dogmatic, dictatorial rudeness to Maud S, and receive her submissive docility, than Canute could hope to cause the advancing waves of the ocean to recede at his futile command. Maud S was unconscious whether her driver possessed the millions of a railroad magnate, or the mites of the poor widow of Holy Writ. What she had shown in former years she again demonstrated to him—that reliable speed could not be forced from her by brute force, or arbitrary treatment, but was only the reward of kindness, gentleness, and skillful manipulation.

Mr. Vanderbilt has driven her, more or less, throughout the entire season, and the result is a total failure. He has harnessed her in double harness with the swiftest and most reliable pole horses in his famous stable, one after another in succession, and the result has been a signal failure. He has appeared on the course of the Gentleman's Driving Park in New York with her frequently, and the hero of many a hard-fought battle among the bustling hosts of bulls and bears in Wall street has never been able to exhibit controlling power over Maud S, even when hooked single to his delicate road wagon. On one occasion he had her unblanketed and led from the sheds, and then he mounted into the wagon and jogged her around the course, warning her up as if preparing for a great exhibition of speed. Meantime the outspoken owners of Dick Swiveller and Edward and other noted roadites sat on the grand stand, their watches in hand, the embodiment of great expectations. After thus jogging her a few times around the course, during which Maud S plainly showed that she was not on the best of terms with her driver, she was tamely driven out of the gate, and slowly jogged home. The bluff roadites, in terms remarkable for strength, rather than polish, indignantly demanded why his rival should induce them to oil their watches for a great feat, if he was only rich enough to own, but not actually skillful enough to speed, the Queen of the Turf.

Still Mr. Vanderbilt is proud of the ownership of Maud S. He had her sent to Saratoga, last season, with his other noted horses, and occasionally would appear behind her and mate to the pole. But these appearances were more to gratify his vanity as the owner of the peerless mare, than for any great pleasure he derived from her speed. In that regard she has always disappointed him, with her high-strung, unsteady action and willful unruliness. She would break and gallop, and buck and jump, in the most disgraceful manner, till the annoyance of her owner at her ugliness of temper became the gossip in turf circles at Saratoga.

In a mood of disgust he summoned her old trainer from the West. The golden wand quickly brought Mr. Bair to his side. He found the mare too high in flesh and devoid of speed. The first trial the unapproachable queen made in 2:52, and in less than three weeks, although still too lusty and fat, she showed a full mile in 2:23, without a break. Almost at once she recognized her friend and companion, and almost instantly she yielded to the winning power of his patient kindness. But the season was well-nigh spent, and the storms of winter were brewing too visibly, in canyons of the Rocky Mountains, to sweep, like the eagle from his eyrie, over the plains to the Eastern ocean, to admit of her being reduced to trotting condition for a great performance before the sun again returns to bring us the genial spring. But she showed the same graceful, gliding action, the same rush of speed, without any evidence of overwrought muscular action, that made her the marvel of trotting performers in former years. Thus twice has Maud S been taken away from her successful trainer, and twice has she been restored to him. While with him she has made her most remarkable exhibitions of speed and steadiness and endurance. While away from him she has proved just as signal a failure in all these respects. She furnishes an instance of striking refutation of the often quoted horse saying, that it is well to exchange drivers with the best of horses, for they will drive better

the change; or that other equally unwise saying, that a trained trotter will go as fast for one driver as for another, provided that they are equally skillful. Higher, subtler than these superficial maxims, is the profound law of affinities. Some horses, like devoted dogs, take a fancy for one master, and a dislike for all others, that can no more be eradicated than logic can destroy the freaks of human affection. There is a strange magnetism between Mr. Bair and Maud S. She instantly recognizes him, and he is brighter and more contented in her company. This is no mere vagary. It has often been observed and remarked by the *habitués* of Chester Park. Unless this strange, magnetic affection exists between man and horse, neither one exerts himself to the full extent of his powers. It is a community of identical interests, and nothing less than this affinity can account for the success of Mr. Bair with Maud S. Upon no other hypothesis could his power to reclaim the better elements of her nature, after the rebellious passions had thus been twice inflamed by unsympathetic hands, be explained. Upon any other hypothesis she would have been forever ruined. Some one queried of the cunning Dan Mace, whether he would not like to pilot Maud S for the coming season. "No," responded the master reinsman, with mingled wisdom and malevolence, "she has a greater fondness for her country driver than for any one else."

Her driver is not a countryman, unless every citizen beyond the confines of Gotham is provincial. But if countrymen have such exceptional success, it would be well for the veteran trainers of New York to move at once to the rural districts. Independently of this sarcasm, it is very questionable whether Maud S would ever become a first-class road horse. She has now become conscious of her speed. Her swiftness would be plainly handicapped by the greater draft burdens to be overcome as a roadster. The extra weight, the unevenness of the road, the want of superb condition, and the frequent starting and checking up incident to road driving, would all serve to irritate and ruin her temper. It must be remembered that in speed, intelligence, and conscious superiority, she is no ordinary organization. She requires superior treatment, in the way of condition and opportunities and manipulation. She could not receive all of these necessities as a roadster in the hands of her princely owner. To all New York roadites the fact is obvious, that Mr. Vanderbilt is not painfully solicitous of the future welfare of his horses. Therefore his interest in horses is fostered, not so much by the love of the horse, as by the personal gratification and physical pleasure they administer to him. Such a man is never horn a horseman. Such a man never feels the exquisite pleasure of that magnetic affinity that exists between himself and his favorite horse. Such a roadite never avoids all that treatment that militates against the comfort and soundness of his horse, when the discrimination would lessen to any extent his own personal gratification. For instance: He is known to drive his horses over the hard pavements at a rate that must be injurious to their feet and limbs for fast work, but he sends them along as if the gold in his fathomless coffers can readily buy more when these are disabled. Thus his treatment of Early Rose and Aldine, that came to him from their circuit campaign with muscles hard as iron, and in perfect condition, already begins to show that soreness that results from rough usage. Very different is the considerate handling of his great roadite rival, the owner of Dick Swiveller and mate. He has a team, both of whom have records better than 2:26, namely Bill Thunder and John W. Hall. These he calls his "banging team"—and he sends them over the pavements and drives of Central Park with much more abandon than he drives Edward and Swiveller. They are handled with extreme caution. The agony stones of the hard roads never punish them. They are walked and slowly jogged till they reach the long, level, unupaved speeding places of the road, or the more or less fully prepared stretches of the racecourse, where they are given their rapid work only when they are ready and greedy for the same. Then their feet and limbs receive the most skillful nursing. As a natural consequence, they are not only in racehorse condition throughout the season, but their limbs and feet are as sound as though they were never driven faster than for healthful exercise.

This digression is made to point a moral. Maud S has been again returned to Mr. Bair to winter, and then in the spring to prepare for great single and double performances. She has been regarded, from this season's trials, as an indifferent pole horse. Mr. Bair, on the contrary, has always contended that a better one never looked through a bridle. Her mate is to be Early Rose. When he drove her and Aldine a full mile, at Hartford, to the pole, in 2:16½, he thought that Aldine at first possessed the greater speed. But, rapid as she is, before the half-mile was passed Early Rose was leading her, and actually came home at her marvelous rush of speed, carrying both the wagon and the mate in her train. Early Rose has therefore been deemed a worthy mate for Maud S to the pole. May she be preserved from severe treatment till the warm sunshine of the coming summer will enable her to startle the turf community by her performances to the pole with the Queen of the Turf.—S. T. H. in *National Live Stock Journal*.

Bellfounder Girl, foaled 1871, the property of Capt. Sorenson of this city, died of typhoid influenza on the 14th inst. She was by old Bellfounder; her dam by Waterloo. Bellfounder Girl was unquestionably one of the best bred brood mares ever bred in this county. Capt. Sorenson's loss is considerably mitigated by her having left him two valuable colts—one a very handsome sorrel filly by Hambletonian Manbrino, the other a weanling chestnut stud colt by Kisber. Parties who have seen this colt say that it is the most perfect and handsome colt that Kisber ever got.—*Rural Spirit*.

The Ukiah Press says: On Tuesday morning Mr. Jesse Thomson, of Little Lake, passed through town, on his way home from Guerneville, where he went to bring home a fine Norman stallion he had purchased. As he was coming home, driving his horse and leading the stallion, he stopped at McClure's ranch, and had only been there a few minutes when the stallion dropped dead.

RACE MEETING.—Lou Remillard, of Union county, who is now here on a visit, gives notice that the fall race meeting for 1883 over his course near Union will commence Sept. 5th. In a short time he will furnish this paper with the speed programme. One of the attractions will be the Stallion Stake, \$500 entrance with \$500 added.—*Rural Spirit*.

CAME BACK.—Lee Knott returned on the last steamer from California, where he has been attending the fall meeting of the P. B. H. A. Mr. Knott brought with him the s g Jim Renwick, by Joe Hooker—Big Gun, by Old George. Lee must see fun ahead.—*Rural Spirit*.

Racing and Trotting in Oregon.

From the *North Pacific Rural Spirit* we copy the following account of the first meeting of the Eastern Oregon Fine Stock Association:

Owing to delays occasioned by the absence of one of the parties interested in the recent meeting of the Eastern Oregon Fine Stock Association, we have been delayed in receiving copy of proceedings of the late meeting until this time. We hereunto append a report that will doubtless, even at this late date, prove of interest to our readers:

FIRST DAY.

REMILLARD'S RACE COURSE, UNION, Oct. 19, 1882.—Novelty race, mile dash, for two-year-olds; \$50 to first at half-mile, \$50 at three-quarters, and \$50 at end of mile.

Wm. Claypool names Mazurka, Alex. LeBuff Cheater, and F. T. Glisan Cap Wilson out on the work to near the half-mile pole, where he was passed by Mazurka, who took all the prizes; time, 2:04. Track very heavy.

Same day—Trotting race, free for all two-year-olds; mile heats, two in three.

John Caviness names Laura C.	1	2	1
Dr. Mack names (by S. Crowell) Au Revoir.	2	1	2
F. T. Glisan names Henry Clay Jr.	0	0	0

Time—3:28, 3:26, 3:28.

SECOND DAY.

Three-minute trot; purse \$100.

M. Sterling names Anvil.	1	1
D. A. McAllister names Dead Shot.	2	2
C. A. Hogboom names Nettle Gray.	dis.	

Time—2:53, 2:52.

Same Day—Purse for three-year-old running did not fill.

THIRD DAY.

Half mile heats, 2 in 3.

Jo Kinney names Policy.	2	1	1
John Furman names Rosa S.	1	0	0
John Young names Daisy A.	0	0	0
Jo Lamar names Jo Lamar.	0	0	0
F. T. Glisan names Maj. Anderson.	0	0	0

Time—0:50, 0:51, 0:52.

FOURTH DAY.

Running race, free for all horses bred in Eastern Oregon, Idaho and Washington; purse \$150.

Jo Kinney names Policy.	1	1	1
John Young names Daisy A.	0	0	0
John Furman names Baby Brown.	0	0	0
Alex. LeBuff names Queen.	0	0	0

Time—1:50, 1:51.

Same Day—Trotting for three-year-olds and under; mile heats, 3 in 5.

Dr. Mack names Au Revoir (2 years).	2	1
L. A. McAllister names Harry (2).	1	2
C. A. Hogboom names Poindexter (3).	0	0
F. T. Glisan names Jeff (2).	0	0

Time—3:14, 3:13, 3:11.

Fifth Day—Two-forty-five trot, 3 in 5; purse \$150.

D. A. McAllister us Lemont; Baxter, Greenback; C. A. Hogboom, Nellie Gray.

Greenback won, Lemont second best. Time, 2:42.

Same Day—Running, free for all; mile heats, 3 in 5.

Ordinance, Policy, Bank Roll and Billy Coombs were the starters. In the pools Billy Coombs sold for \$20, Ordinance realized \$15, Bank Roll \$3 and Policy \$2. Here is the

SUMMARY.

Ordinance.	1	1	1
Policy.	4	2	2
Billy Coombs.	2	dis	
Bank Roll.	3	dis	

Time—1:47, 1:46, 1:47.

Sixth Day—Trotting race, free for all two-year-olds sired by Anvil, Dead Shot, Gen. Sprague, Bashaw Jr., Tippeo Clay, Nasby, Patchen and St. Charles, that had not been trained prior to July 1; purse \$100. Nominations—D. A. McAllister's Harry, by Dead Shot; John Caviness' Laura C, by Anvil; Ben Brown's Lady Poole, by Bashaw Jr.; the starters were Harry and Laura C.

Harry.	1	1
Laura C.	2	2

Time—3:24, 3:04.

Same Day—Running, free for all, dash 1 1/2 miles. Wm. Claypool named Mazurka, 2; John Gran named Dauger, aged; A. LeBuff named Billy, 4; Wm. Logan named Bay Johnny, aged; Ross named Mollie, 4. Mazurka won. The purse was \$50.

The races were so conducted as to give general satisfaction, again adding to the reputation of Mr. Remillard's track for fair and honorable dealing.

Sale of Six Trotting Fillies.

Mr. B. J. Treacy, Ashland Park Stock Farm, Lexington, Ky., has sold to Col. F. Garcia, Pledras Negras, Mexico, the following six head of young trotting fillies:

Nannie Bush, br f, four years old, by Tom Bush (son of Mambrino Patchen), dam by Mambrino Pilot.

Lucy Clay, b f, four years old, by American Clay, dam Lucy Smith by Brignoli; second dam Lucy Garnett by Endorser, third dam Lucy Fowler by imported Alhion, fourth dam by imported Leviathan, fifth dam by Facolet, etc. Bred to Gov. Sprague.

Nicolina, b f, four years old, by Mambrino Hambletonian, dam Nicola (dam of Dream, 2:25), by Reveille (son of Mambrino Chief); second dam thoroughbred. Bred to Banker.

Nellie Walker, b f, four years old, by Charley Walker, dam by Bourbon Chief; second dam by Gill's Vermont, third dam by Bouner's Grey Eagle. Bred to Red Wilkes.

Susie Taylor, b f, three years old, by Charley Walker, dam by Bourbon Chief; second dam by Gill's Vermont, third dam by Bonner's Grey Eagle. Bred to Young Jim.

Lydia Cook, br f, three years old, by Smuggler, dam by Nichols' Edwin Forrest; second dam by old Tom Crowder. Bred to Mambrino Patchen.—*Kentucky Live Stock Record*.

Archer's failure to score in either of the chief events at Shrewsbury was a sad blow to his adherents. Lowland Chief's inglorious exhibition on Tuesday is one of those things which no fellow could understand, were it not that a week or so before the close of the season it is customary to see public form put completely in the shade by a series of "unexpected developments." Although Falkirk was second to Experiment in the Shropshire Handicap, he was so far behind at the finish that his friends could hardly have felt sanguine about his success on the morrow. That he did win then we all know now, but he only got home first by about an eyelid, and it would be like tossing for money were he and his two companions set the same task again. Likely enough odds would be laid on Wallenstein, who is said to have suffered in the scrambling finish. Playing at bumps with Frederick Archer suggests carrying the war into the enemy's own country, challenging the challenger, drawing the dragon's teeth, or doing any other of the deeds representative of desperate valor or no less desperate inexperience. Woodburn, who rode the winner, must be as astonished as anyone at his own temerity. Frederick the Great's indignation knew no bounds; and while his protest was being discussed by the stewards, backers of Falkirk would have taken a bit less than they were entitled to, so as to make certain.—*Pendragon in the Referee*.

SPORTING NOTIONS.

Pleasantly Related by Pendragon in the London "Referee."

Although only fourteen years have elapsed since Julius retirement from the turf, the news of his death carries us back to what, judged by events alone, might well be a couple of generations. Everything seems altered since the Duke of Newcastle's colors went down before Mandrake in the Doncaster Cup of 1868. We no longer believe in the limits that used to be then set on the best obtained capacity. Our ideas of the possible and the impossible have been altered times without number since last Julius was placed in charge of the starter. This is, though, only one of many changes that have taken place during the last fourteen years. Changes in our wagering process have been as remarkable and as numerous as changes in other and perhaps far less important directions. The name of Julius takes us back at once to the time when as much money could be won and lost over a really big race as can now be won and lost in the course of an important meeting. It takes us back to the time when forthcoming-event betting was the principal feature of racing, and had an existence entirely unknown to such as began their experiences within the past ten years or so. Julius was owned by one of three noblemen whose career upon the turf may be fairly said to represent a distinct epoch, and who were each of them remarkable for their ill-fortune. What was done then had much to do with the alteration in betting's business. The plunging era, though profitable beyond all previous conception to the bookmaking fraternity, sounded the knell of a period during which their makings were immeasurable.

About the time that Julius came upon the turf, training intelligence was first published in the sporting papers. Until then nothing was known about the various candidates for greater or lesser races, except that they figured in the betting lists. Many a horse has been prominent in the market for weeks—I might almost say for months—after he had broken down hopelessly. Horses have been favorites for races which were to be run within a few hours that had not been outside their stables for a long while, that were perhaps dead or turned out of training. Touts were then employed exclusively by the brokers, or by such owners and trainers as wished to know what was being done by other owners and trainers. The publication of reports from the various stables came like a thunderclap not only upon the leading spirits of such stables, but upon the bookmakers and the others who had hitherto done so well, and who had never suspected the mine's existence until it was sprung upon them. This is not all. The innovation was looked upon as an innovation, and despised accordingly by those in whose interest it had been arranged. Those who were to benefit most by it shook their heads sagaciously, and said it would never do. Owners and trainers resented it bitterly, and the great Jockey Club itself was stirred from its then chronic lethargy, and almost began to think of exterminating the newspaper which had dared to so discredit the history, not alone of the turf, but of turf journalism.

Many and violent were the articles written against such a breach of press etiquette—etiquette which until now had remained unsullied and unsuspected through all temptation; and more than one old-established sporting paper pointed with pride to the fact that it had never dreamt of interfering in such a contemptible manner with the rights and privileges of others. But there was no doubting the importance of the step nor its healthful action so far as the public was concerned. As soon as it had time to assert itself, and as soon as the public had also had time to understand what was being done for it—directly it was found that backers and bookmakers alike subscribed largely to the then one and only paper which printed stable secrets—other papers had to descend from their pedestals of purity, cease to ride the high horse of conservatism, and to do what was necessary to retain their positions. Although the touts connected with the sporting papers, like the touts connected with the bookmaking firms and training establishments, make frequent mistakes, the result as we find it now is that it is no longer possible to lay against "corpses" and "wrong 'uns"—unless they are such because of owners' and trainers' intentions rather than because of their own physical infirmity.

It would be a hard thing to say that the turf is in any way purer now than it was in the days when the Marquis of Hastings, the Duke of Hamilton, and the Duke of Newcastle's names were on all men's lips, but we are certainly saved many of the scandals that were then common. Men ruin themselves now, I suppose, as much as ever they did. Still, there was a publicity about the way in which the Marquis of Hastings ruined himself, and an opportunity given to sickly sentimentality by the ghastly end made by him, that has happily since been avoided. No one can think of Julius without thinking also of the time when three young noblemen came into possession, as was then reported, of immense estates, princely revenues, and large accumulations, and did their best and their worst to make ducks and drakes of their fortunes, and to show what a hideous anachronism, and how wide of all wisdom, is the great and still existent principle of primogeniture. It is customary to speak of the Marquis of Hastings as the greatest sufferer the world has known among unsuccessful gamblers. I should think this is about as wrong as wrong can be. As long as gaming has had an existence there have always been times when it has been the foremost fashionable folly, and when it has swallowed up fortune after fortune. Therefore it is unfair to give racing a discredit which should at the worst be borne by it in common with Crookford's and the minor gaming hells. Many a man has sat down in a club and lost at the one sitting more than the Marquis of Hastings ever lost during three or four days of a big race meeting, and the outer world knew nothing whatever about the transaction. Even now, although such sensational wagering as that associated with Hermit, Lady Elizabeth, Julius, Lecturer, and many another is unknown, there are places at the West where the rattling of the dice-box and the shuffling of the baccarat cards are perpetual, and where ruin to golden youth comes much more easily than ever it came to Epsom or Ascot, Doncaster or Newmarket.

The public got to know a great deal about the Marquis of Hastings because he was a weak and hysterical young man who whimpered and wailed, and made a great sensation directly he had to begin selling off the lands and houses which he himself did nothing to obtain, and which he cast away so recklessly. Had he been satisfied with turf transactions and with turf transactions only he might now have been alive and solvent. He was a sorry pigeon at best; one who possessed neither the courage nor the capacity which has led

others of his kind to turn and rend those who first played hawk with them. But, taking him as we may, the chief way of accounting for his ruin and consequent death—death of a broken heart, so it was said at the time and currently believed—was because he had not the necessary sinews of war with which to enter upon so ruthless and unforgiving a campaign as that he had mapped out for himself. The sentimentalists who sorrowed over this victim of the turf clean forgot that what he did was done of his own free will; that it was he who sent forth the fiery cross and invoked the war of extermination which ultimately ended in his ruin. As it was, he had ample opportunities of getting his own back again—did, in fact, two or three times stand in as good a position as that he stood in when he started; but he would never let well alone, and therefore fell an easy prey to the vultures who constantly surrounded him.

I never myself could comprehend why sympathy was so freely and publicly shed upon the Marquis of Hastings. He was, like most other gulls of the kind, greedy and shortsighted to a degree. As a gull he stood almost without rival, although the bead-roll of the turf and the gaming-table in this particular offers us a choice such as can be found in no other direction. If the true story of Lord Hastings' life had been told, the men who were so ready to weep over him and his misfortunes could not have felt other than contempt for one who by his own act sadly marred prospects which had been arranged for him with special favor by fortune—fortune, who every day passes over unnoticed thousands of deserving suppliants. As it was those whose sorrow for him was loud-est and most public were those who took him as a text from which to prove how deadly a thing is the turf in all its ramifications. Had he lost ten such fortunes as his by means of Stock Exchange speculations, had he then howled ten times as much as he did, and had he wound up with any sort of lamentable end that can be imagined, the gentry who were so anxious to point the moral and adorn the tale of his career would never have said one single word about him. The Duke of Newcastle, who owned the horse whose death arouses so many dormant recollections, must have suffered far more than the Marquis of Hastings suffered, but he never became an object of popular sympathy. His state was probably the more gracious. God help the man who becomes the recipient of public sympathy—and who requires it. He went through the Bankruptcy Court, was subjected to examination, put his property in the hands of receivers, retired into private life in a plain, straightforward, and methodical manner, and wound up his career by dying as quietly as he had lived for the past decade nearly four years ago.

Singular is it, but none the less true, that neither of these young noblemen—neither the Duke of Newcastle nor the Marquis of Hastings—lost as much, if both their losses had been counted together, as was lost by another young nobleman who is still alive, still young, and still to all outward seeming as jolly as in the days of hot youth and gambling impetuosity. They could not lose it, because they had not got it. If it could be put on paper what was the amount of money lost by the Duke of Hamilton during the plunging period, not only lost to the bookmakers and the bone-rattlers and the card-sharps, but lost to his own business managers as headed by the late lamented Spider, what a mouth-watering sum would have to be mentioned! But the Duke of Hamilton took his gruel with an amount of indifference which was little less than stoical. Curiously enough, although the fact is undoubted, nobody—that is, nobody among the moralists—from that day to this appears to suspect that of the three victims of the plunging era the one about whom the most noise was made was the smallest loser—was in reality the one least worthy of sympathy.

Quite independent of its class, Julius' career was nothing short of remarkable—it was a miracle of in-and-outism. Had he flourished in these days it is likely enough Sir John Astley or someone else who had backed him when he lost and laid against him when he won would have wanted the stewards of the jockey club to inquire into the contradictions offered by his public running. Julius did nothing worth talking about, if we except his running third in the Leger with one plate off and another twisted, until he carried off the Cesarewitch from a fairly good field, under the then extraordinary and all but unprecedented weight of 8st. But he was utterly unable to help his fluctuations. He lost races that he ought to have won, won races that he ought to have lost, and got third, close up in the Leger, despite difficulties described, after having been beaten all to pieces in the Two Thousand Guineas and Derby. Then he made his mark on the handicaps of the age by the Cesarewitch performance under 8st, a feat which should have ended his three-year-old career in a blaze of triumph. He won easily by four lengths from a field which contained many highly-tried and comparatively leniently treated performers. Although beaten by Lady Elizabeth in their memorable match directly afterwards, the performance was one that stamped Julius as first chop, as at the time the filly was the wonder of the age, and was fondly regarded by the then authority as a horse of any number of centuries. Still, as a proof of what sort of a filly Lady Elizabeth was, it deserves to be put upon record now that, according to the weight for age and sex table, she was giving Julius, who on public form was as good as the best of his year, 19 pounds. After this, cruel fate was again dead against Julius; he was destined once more to show the glorious uncertainty of the turf by running a dead-heat with The Palmer for the Free Handicap at Newmarket Houghton, for which he started at about the fifth price of his antagonist. This was the final event of his three-year-old career. By means of it, when added to his defeat by the two-year-old, all those who had insisted that his performance in the Cesarewitch was merely another proof that the best handicap form was always inferior to the best weight-for-age form found plenteous opportunity of proving their words during the dullness of winter.

If Julius' form was contradictory as a three-year-old, what is to be said about it a year later? The story is of itself so interesting and answers the question I have asked so satisfactorily that perhaps it would be as well to let it speak for itself. Julius made his first appearance as a four-year-old at Newmarket Craven, 1868, where, in the Ninth Biennial, he beat Hermit, the previous year's Derby winner. Hermit was supposed to be not altogether himself, in addition to which he was conceding 7 pounds. The race was not won without such a struggle as led Mr. Chaplin and his then adviser to believe that at even weights the decision would be reversed. Julius' people thought otherwise; indeed, they went to the length of offering one pound, and accordingly, at the Newmarket First Spring, the pair again met over the two middle miles in a match for £1,000 a side, Julius carrying 8st 10 pounds and Hermit 8st 9 pounds, according to agreement. This time Julius, with 11 to 10 laid on him, ran up to his character, and won much more easily than he had won in the previous encounter. At the Bath and Somerset County meeting in the May following, Julius added to his already great reputation by beating Achievement in the Beaufort Cup, Achievement was, however, running under 9st 2 pounds, while Julius had to put on but 8st 10 pounds, there-

fore he must have been, according to the then measurement, in receipt of something like 11 pounds. It is worthy of note here, as showing what was the reputation of Colonel Pearson's flying filly, that, although he had so decisively beaten Hermit, Achievement was backed at evens, while six to four was on offer against Julius, notwithstanding the handicap. He won with so much ease that the wisdom which cometh after an event pointed out to all whom it most concerned that he would have beaten Achievement had they run on even terms—that is, allowed her weight for sex.

By this time it appeared as if Julius had all weight-for-age prizes for which he was entered at his mercy, and it is little wonder that at Ascot on the opening day, when he started for the Vase, 3 to 1 should have been laid on him. He was, however, easily beaten by Blinkhoolie, who, according to previous show, should not have had a look-in, and was not thought worth backing at 12 to 1, although there were but four runners altogether. A significant feature of this race is that had Julius won it he would have been disqualified, as, though he incurred a 4 lb penalty, he failed to put it up. At Stockbridge, which is now but the shadow of its former self, even if it is that, Julius met with another reverse, and one that was still more extraordinary. The Hurstbourne Cup was looked upon as a walk over for him, only Gomera and Birdseeker forming the opposition; any price could have been obtained about the pair coupled. The official quotation is 50 to 1 on Julius, but 100 to 1 was laid on him—certainly it was offered during the running. Gomera, who, if I remember aright, was trained in Julius' stable, won by a head. Something like a panic ensued after this; the result was regarded as a fluke, and nothing else. Presently we find Julius once again a hot favorite for no less a race than the Goodwood Cup. At the slightest odds he was backed against the field, which numbered five—Speculum, Blueskin, Taharet, Julius and Suffolk. This was how the judge placed them at the finish, so it will be seen that Julius was nearer last than first. In the Warwick Cup, getting on towards back-end, he succeeded in beating two outsiders—Tertullius and Vertigern—and again the cry of fluke of the century was raised about him. The sustaining effect of victory, no matter how many defeats may have preceded it, is shown by his starting a warm favorite on his next public appearance—in the Doncaster Cup. Again he blasted the hopes of his supporters, being somewhat easily beaten by Mandrake. This was Julius' last appearance on the racecourse, and in 1869 he was advertised as a stud horse.

Judging from the remarkable failures that have been made by some of our greatest and grandest and most consistent gallopers when placed at the stud, Julius ought to have been a tremendous success as a stock-getter. He was, however, still more disappointing as a sire than he was as a racehorse; he never begot anything worth troubling about now. When we contrast the position held by Hermit as a stallion with that occupied by Julius, it will perhaps be admitted that the sensational Derby winner of 1867 has since amply avenged himself for the two beatings he received from his extremely uncertain opponent in 1863. No new lesson is to be learnt from the further career of Julius, as times without number it has been shown that within fair and legitimate limits success or the want of it as a racer has nothing whatever to do with success or the want of it as a stallion. As Julius was in his time a sensational Cesarewich winner, and won carrying what was then regarded as a phenomenal weight, considering the company, it may be as well to exploit the doubts and difficulties of stock-getting by means of another Cesarewich winner of reputation. This is Robert the Devil, the offspring of about as unfashionable a union, the son of about as disastrously disappointing a sire and as unpromising a dam, as it is easy to imagine.

This looks like being a week remembered as much because of the opportunities it offered to the moralist as on any other count. The dead have full attention paid them; now we may in due course turn to the living. Wallenstein had, in the Shrewsbury Cup, such another narrow escape of winning as must have made his former proprietors smile—as must have made those who own him now think their sneers of some time back of American trainers a trifle premature. The one American who stood by the cast-off of his nation, depending upon the joint skill and ability of the brothers Archer, must have had an agony deserving of special mention. Those who about this time last year were given frantic by the successes of the Yankee plunger had ample satisfaction on the field where Falstaff did battle with the men in buckram. The reference is by no means out of place if we remember the swashbuckling business which happened last back-end and in which Mr. Walton and an English baronet fought one another, in imagination, until both were killed several times over. This exhibition of modern chivalry was not given at Shrewsbury, 'tis true; but it formed a stock subject of conversation there, as did the then marvelous successes of the new plunger. How different was the story told by the side of the Severn this time!

Plungers are for all the world like flies; they may load themselves with "sugar" once, mayhap twice, and get safely away; but woe betide them if they, overdone with the courage which comes of too much success, rashly give way to further temptation. In an other particular they are again like flies; they never know when they have had enough, and the result is, in ninety-nine cases out of every hundred, as inevitable as it is to them disastrous. Mr. Walton, when he went home last year, gorged for the time being to satiety with English plunder, had no intention of giving his victims a chance of getting their own again. For a while he determined to settle down in his own country, leaving, like a wise man, the chances of the turf to be encountered by others. But time after time he read of successes in which he would have shared, of failures which he would have avoided, or which would have helped to still more enrich him. At last he could no longer bear the idea that he was allowing the potentiality of wealth beyond the dreams of avarice to slip through his fingers, and in due course he came back with the avowed intention of conquering all before him. But intention is one thing, result another. At first Mr. Walton had a moderately fair share of success—for a plunger—but presently the tide took a very decisive turn, and his losses began to be serious.

Had Wallenstein won either of the races he only lost by the breadth of a man's hand lately, all might yet have been well with Walton. Had he won both of them—though that, by the way, would not have been possible—the American might have chartered a ship and freighted it with English "bullion." But fate was inexorable, and fortune once again decided to show she was at the beck and call of no one. Result, disaster to Walton, who, like every backer that has preceded him had only to stay long enough among the layers to let go all the money they had previously "lent" him. It is very much to be regretted that, admirable a winner as Walton has shown himself, he is anything but an admirable loser. More than once recently he has spoken very disrespectfully of those who took his money; what is far worse, he has deeply, darkly, dangerously hinted that once or twice affairs had been "readied" for him. Ha! ha! As if such an operation were possible among high-souled English racists!

KNIGHTS OF THE RIBBONS.

"Old Batch" and His Peculiarities—Gen. John Turner's Prominent Characteristics.

How many great trotters have been the artificial product of patient skill and industry triumphing over defective mental and physical organization; and how many phenomenal trotters have been checked in their successful career by the ugly tempers, pig-headed notions, indolence or even honest mistakes of their drivers, can never be accurately known. Suppose that nervous flighty mare, Goldsmith Maid, had stopped in her career before the memorable race at Buffalo, where she first began to show some signs of good sense, her name today would simply recall to the horseman such mental comment as is now bestowed upon Catch Fly, Queen of the West and a host of other speedy but unreliable trotters. Who can say but that the same possibilities existed with each one of them as with the Maid? The reformation of such a nature requires, however, the almost undivided attention, in fact, the whole heart and soul of a man whose capabilities are nearly allied to those of the great poet or the great painter; for this reason few such animals are rescued from oblivion. The dictionary has all the words; master pieces in literature are not plenty; canvas and pigment abound the world over—the world knows but few great pictures; each generation knows but one king or queen of the turf. The union of sensitive, highly-wrought, nervous organization, on the part of equine and human, requires for its delicate balance an opposition of sex, therefore the queen is greater than the king; for this reason the wildest stallions are often quiet and docile to the magic touch of a woman's hand upon the lines; and should such a woman as Middy Morgan devote her life's best efforts to the cultivation of a stallion's speed, the king would be greater than the queen. The control of great speed is a sympathetic magnetism, and the organizations that act in accord must, for the acme of great results, be mutually receptive; for this reason the extreme limit of speed thus far, beginning with the famous mares of olden time, Lady Suffolk and Flora Temple, has been reached by mares of highly-wrought, nervous temperament; or, in other words, electric batteries of tremendous power, whose efforts have been stimulated by the ardent sympathy and magnetic control of some man who has given the very best of his life to the purpose. Thus, Flora was the master-piece of "Old Blocks," as his friends fondly termed him; Goldsmith Maid the supreme effort of Budd Doble's life; Maud S of Blair's.

With this somewhat discursive prologue I will now proceed to the business on hand, which, briefly stated, is to record my personal impressions and opinions of some of the men who drive the trotters of America. I shall in no instance make any attempt at a biographical sketch, or even the turf history of a driver; but simply present my impressions of the methods, skill, characteristics and peculiarities of some of the drivers I have seen. I shall not mention them in the order of their rank or popularity, but hap-hazard, as incidents regarding them occur to me. The public judgment of a driver is often far from being in accord with the professional opinion of his capacity, while both are sometimes strongly tinged with prejudice. The whim or caprice of a wealthy gentleman sometimes, as in the past season, elevates the order of talent that nature designed for no higher employment than the manipulation of foot-hook, bandages and rub rags to the management of great trotters. Such cases require the mantle of charity for the driver, as the error is that of the employer, rather than the employee.

As a beginning for my sketches, the name of one of the oldest and most eccentric drivers occurs to me, Uncle Jack Batchelor, of Georgia, a thin, weakened, withered old man, with old-fashioned steel-bowed specs, which he wears in the sulky. Dressed in the plainest attire, with a light-colored cotton blouse, that as it flutters to the wind behind the rapid strides of Mattie Graham reminds one of a night-shirt, he altogether presents exactly the opposite of one's ideal of the driver of a racehorse. But those who know him never forget that he is a driver, and that behind those old specs a keen glance often spies the way to victory. Neither do the other drivers ever forget that the slight old man is a game chicken and a thoroughbred in whose throat never rises the slightest taint of cowardice. Some years ago, in the Illinois circuit, when Mattie was first beginning to be considered, the judges at a certain place thought she might trot some faster and undertook to change drivers. Uncle Jack said: "This mare is mine and I will drive her where I please; you put a man behind her and if he drives her to the front I will shoot the _____ out of the sulky." No change was made.

Last July, in the evening, after Mattie had trotted a good game race at Chicago, Uncle Jack wended his way to the Sherman House to recuperate his wasted energies; the old man's plain attire and unimposing physique did not impress the lordly waiter at table with the notion that he would pay for prompt looking after. The waiter was at the same table, and noticing the long delay, engaged Uncle Jack in talking about Mattie, but even this interesting topic would not serve always to allay the pangs of hunger. At last, after vain efforts to attract the attention of a waiter, he suddenly got up, as if delivering an admonition to his mare to go along when in a close pace, exploded with "I'll have some supper or I'll have something else," which brought him servitors in plenty. The first one handed him a bill of fare, which the old man dashed aside, and said: "Bring me some supper." He got a good one and the most obsequious attention. At first sight one would not think that the old man could drive a race at all, or that it would be safe for him to sit in a sulky; but he drives very well indeed, uses good judgment, knows his place and keeps it, does not squeal and is rarely ever complained of by others. From present reports he will likely manage more trotters next season, all his own, however. The flaming specs and flowing night-shirt are liable in the future, as in the past, to be the oriflame of victory and the indices by which tenderfoot reporters can tell where Mattie Graham is in the race. Uncle Jack will pardon my too great familiarity with his idiosyncrasies; it is the fate of fame to be dealt with by garrulous scribblers.

John E. Turner, alias "the general," is a small, compactly-built, neatly-dressed, middle-aged man, who would pass anywhere for a staid and sedate broker or bank officer; he is reputed to be the wealthiest driver in the country; and these two facts have some relative significance. He applies to the racetrack his natural aptitude for business. In the sulky, with his brilliant colors, he looks aged; a more subdued shade than bright green would be appropriate to his venerable and dignified demeanor, but possibly not more in accord with his resolute and unsubdued spirit. Turner is a thoughtful and astute man, his methods in the sulky are rigid and mechanical, but usually well timed and effective; he sits bolt upright and carries his whip like the baton of a field marshal. Turner's name is intimately associated with the career of many of our great trotters, but the two T's will be longest remembered, Thorne and Turner, Turner and Thorne. Hannis, Trinket and the rest, game and speedy

trotters though they be, fade into the background beside the nonpareil of racehorses, Thorne. The acme of Turner's success has been reached with this trotter, or will he when Thorne drops his record. Fortune can not have in store for man many such prizes. Thorne could not down the record, but he could, by determined effort, down the "gang" in 1882. I doubt whether Turner's taste or capacity runs in the way of successfully manipulating horses with which he is not familiar; doubtless he can master the mysteries of such trotters as he undertakes to study, but his talent is not the superficial one of miscellaneous adaptability. Therein partially lies the secret of his momentary success. A good one in his hands, well stuck to becomes more than good. Neither has he, on the other hand, the organization that would be in perfect sympathy with mares possessing the highest form of nervous temperament, and his success has not been linked with the names of such animals.—M. T. Grattan in *Breeder's Gazette*.

Australian Racers.

Some idea of the growth of the Australian racing interests may be obtained from the following synopsis of the list of winning sires for the season of 1881-82. The champion stallion is Panic, by Alarm, from Queen of Beauty, who has been dead some years, but still his name appears first. This season he has thirty winners, who won sixty-four races, valued at £8,417. Maribyrnong ranks second, with half as many winners, who only won twenty-six races of the value £5,523. Then comes the great New South Wales defunct sire Yattendon, with twenty winners and thirty-eight and a half races won, worth £5,447. There were no less than twenty-two other stallions, the progeny of which won upward of £1,000, namely: Kelpie (dead), £4,608; Robinson Crusoe, £5,830 (first year); Barbarian, £3,792; the Peer (dead), £3,547; Epigram, £2,723; Hawthornden, £2,728; Gang Forward, £2,481; Bethnal Green (dead), £2,228; The Drummer, £1,850; Fireworks (dead), £1,783; Tubal Cain, £1,700; King of the Ring, £1,670; Slanderer, £1,625; Tim Whiffler, £1,586; Lord of Linne (dead), one winner, two races, of the value of £1,537; Conrad, £1,444; Countryman (dead), £1,352; Gemma di Vergy (by Gemma di Vergy), £1,272; Bluegown (dead), £1,254; John Bull, £1,217; Argus Scandal, £1,211, and Snowden (dead), £1,011. Altogether there were 365 winning horses, who won 752 races, of the value of £87,000. Such an enormous sum as this speaks volumes for the success of racing in Australia. Of the 145 gentlemen who have won prizes from £4,657 down to £100 no less than seventy-one hail from Victoria, fifty-two from New South Wales and twenty from South Australia. Among the twenty principal winners Mr. De Mestre is top of the tree with £4,657, Mr. Dakin coming next with £3,102; New South Wales (nine owners), £19,110; Victoria (ten owners) £16,964; South Australia (Sir Thomas Elder), £2,408. Mr. Edward Lee, of New South Wales, who was so successful in 1878, when he carried off the rich Maribyrnong Plate, Sydney Derby and the A. J. C. Sires' Produce Stakes, has to be satisfied with a single win, and that only to the value of £100.

Will St. Julian trot again? is an interesting question to many horsemen. Some good judges claim that he has lost his speed and others, claiming to be equally long-headed, assert that his retirement the past season is a part of a deep-laid scheme. They assert that Hickok, finding there was no profitable engagements for the horse, adopted the course he did of persistently claiming him to be "off," so as to secure a series of races for the season of 1883.

The glanders is quite prevalent in some portions of Colusa county. Several horses have died of it, and others have been killed by their owners to prevent the spread of the disease. In some instances it was mistaken for horse distemper and was treated as such until the disease showed its true character, and that it was at a stage so advanced as to be incurable. Glanders is always fatal.—*Plumas National*.

RACES.—Nov. 30th, at Prineville, Widow Dun, Billy Manpin and Jim Blakely were started in the half-mile repeat race, two in three. The mare won in two straight heats, Billy second, Jim being distanced in first heat; time, 0:56, 0:53½.—*Rural Spirit*.

CORRESPONDENCE.

New York Letter.

NEW YORK, Dec. 16, 1882.

EDITOR BREEDER AND SPORTSMAN: Since my last letter nothing of transcendent importance has occurred in this vicinity as regards out-door sports, and if the athletic games at the grounds on Thanksgiving Day be excepted, I have to chronicle a perfect dearth of sporting news, as befits indeed our arctic season of ice and snow, now fairly inaugurated. For over a week past, since Nov. 20, the metropolis has indulged in the unusual luxury, so early in the winter, of fine sleighing and our Central Park as well as all the roads in the upper districts of Manhattan have rung at all hours of the day and night with laughing voices and the merry ringing of the bells. And as this first installment of "earth's white coverlet" came in dry and not wet we are likely to have a plethora of it before spring, if the old-time weather prophets are to be believed.

Week before last death marked for his own the oldest jockey in the country, the widely known Gilpatrick or "Gil" as he was familiarly called. Born sixty-five years ago on the banks of the upper Hudson, this famous knight of the pigskin, has ridden and won a great many races, but not a tithe of the ridiculous number credited to him in some statements of our New York dailies, some of which are in the habit of publishing sporting items that would put to the blush an Eli Perkins or Tom Ochiltree, who both enjoy the enviable distinction of champions of the "long how." Gilpatrick was never very well provided with this world's goods, or if he was, he quickly got rid of them, and since he rode his last races for Engeman at Brighton Beach three years ago, has lived in comparative poverty from hand to mouth, as it were. Still the old veteran was never allowed by his many friends to actually suffer, and was around as spry and active as most men over three score generally are until the election day's racing at Fordham on Nov. 7th last, when exposure led to a bad cold, and resulting in that grim enemy of the medical profession pneumonia, finished his earthly career. His old employer, Wm

Eugeman, with his characteristic benevolence and liberality, at once forwarded a liberal sum to the widow, and she will no doubt be provided for in the future.

The result of the International foot-race on last Thursday is doubtless an old story to your readers, the wires having told you the leading features of this notable contest, which was, considering the attendant circumstances, a very great performance on the part of both men, the American in spite of all interested stories of sickness, loss of form, etc., running fully up to the expectations of his party, as he beat, on this occasion, his previous record at three-quarters of a mile by five seconds. But the faster Myers ran George seemed able at the critical moment to let out still another link, and his tall sable-costumed form made the pace from the crack of the pistol as he did in both the other races. In vain did the representative of Manhattan strive to head the black phantom in front of him; it was Albion's day on this occasion, and the American, if he ever gets in another race with his late adversary, will have learned sufficient to tell him to keep within his distance, five-eighths of a mile being as far as he cares to go, evidently. George has gone on a visit to the Falls of Niagara, but will return in time to run in a handicap race, Dec. 12, at Madison Square Garden, in this city, after which he will return to England. Notwithstanding all stories to the contrary, he is well liked here, since it has leaked out how much more he was sinning against than sinning in the late unpleasant controversy between the two men and their partisans, prior to the late race. Myers' running on last Thanksgiving Day clearly showed that there was "a nigger in the fence somewhere," for such exceedingly quick recuperation after being as badly off as was claimed for him is very seldom heard of, although it might have been possible. George at the time was universally censured for claiming that Myers was not as sick as he and his party declared, but the sequel rather bears him (George) out. Speculation was very heavy on the race, opening at \$100 to \$80 on Myers (rather peculiar odds on a convalescent (?) athlete), and closing at \$100 to \$80 on George, the public supporting the Englishman to a man, leaving the "knowing (?) ones" to back the American champion, and as happens very frequently on the turf, the posted division got "left," sadder but wiser men.

A new market for *passee* thoroughbred races has developed in this city of late, in the demand created for saddle-stock, particularly in our metropolitan riding-schools or, as the *Jennese dore* fondly term them, equestrian academies. Little do most of the fair patrons of these establishments imagine that the quiet back that carries them in so staid a fashion has perchance won turf honors at Jerome, Monmouth, Sheepshead, or, "perish the exciting thought," been one of the mighty brigade of "bach-comers" by the sad sea waves of Brighton. If the fair burdens of these aristocratic steeds are wise and will heed a warning they will do well to keep each fiery Bucephalus for from the madding crowd in the vicinity of any of these race-courses of ours, or the result might cause disaster should the warhorse "scent the battle from afar," or sighting the starter's falling flag, as he send, off on their journey some old comrades of many a hard-fought fray, take a notion of having a hand too, whether his fair rider wills it or not.

Mr. Wm. Eugeman to-day telegraphed from New Orleans that his arrangements for a five year lease of the grounds of the Louisiana Jockey Club were all completed. A new association has been formed with R. W. Simmons of the L. J. C. as president and Mr. Eugeman as general manager, etc. The lease is for six years (or winters) the first season (Dec. 1882-May 1883) free, second a rental of \$1,000, third \$2,000, fourth \$3,000, fifth \$4,000 and sixth \$5,000. Racing is to begin in about two weeks (Dec. 23rd) and it is calculated to give three days' racing each week until about May, it is said, but April is probably meant. The success of the venture is certainly problematical with the chances in its favor, but the projector is energy personified, and if any man can make the enterprise profitable, he will.

Our news from Albion's rock-bound isle is, of course, very meager as regards anything of great interest. The plunger (Waltou) has returned from thitherward, and denies that he lost \$125,000, on his recent visit, all the English sporting weeklies to the contrary notwithstanding. James Roe, the trainer of Blackburn, Hindoo Geo. Kenny, Runnymede, etc., has gone over some two weeks since to learn what he can about training methods in the old country.

Pincus and Tom Puryear, the trainer and manager respectively of the Lorillard English contingent, came back a few days since and reports that Iroquois has not broken down, and may run again, that the last Rancocas shipment abroad, comprising the celebrated Pinafore, Parthenia and others, arrived out in fair order, and that the Crawford two-year-old Blackheath is a very great colt much sounder than most persons think. They expect him to stand training next year. Both look hale and hearty and express themselves as glad to get home once more.

Ex-Governor Stanford has made another important purchase here for his Palo Alto stud farm. He has bought of the Bonners the gray mare, Midnight, the dam of the great trotters, Noontide, 2:20½, and Jay Eye See, 2:19. The latter was truly a phenomenon last season. Cyrus Holloway the jockey is with you I see. Mr. Baldwin engaged him at Baltimore in October, and there are few more capable and honest performers in the saddle. Cyrus rode old Glenmore when he beat Luke Blackburn for the Long Island Cup in 1881, and his thorough knowledge of his art was very conspicuous on that memorable occasion. He has earned success and certainly deserves well of his new employer. PACIFIC.

Smiths & Powell of Syracuse, N. Y., write that they have just completed some butter tests of their Holstein cows, Egis and Netherland Queen, five years old. "They were not fed with the idea of making records, but records were made upon their regular feed, without change in quantity or quality. Egis made in seven consecutive days eighteen pounds two ounces of butter, and Netherland Queen in seven consecutive days made twenty pounds of butter. The butter was weighed after working and before salting. Netherland Queen is one of the famous Netherland family, which is second only to the Aaggie family as milk producers.—*Cultivator*."

A Kansas City dispatch dated Dec. 13 says: An association of unusual strength and significance, to be known as the "American Land and Cattle Syndicate," was organized here to-day. It consists of thirty members, including some of the most influential business men of this city, bankers, land and cattle owners, both United States Senators and the Governor of the State. The syndicate is preparing to control large interests in the Territories and in the Southwest, with branch offices in Texas, New York and London. A meeting is to be held later to complete the organization, when further details will be made public.

During the last ten years cattle in New South Wales have increased very little, but sheep have gone from 16,000,000 to 33,000,000.

HERD AND SWINE.

The Cattle Market.

Several of the daily papers have commented upon the high price of beef—and some of the views expressed would lead a person to believe that California and Nevada had been entirely drained of cattle. Had the subject been given due attention the writers would have discovered that without going to Montana we are fully able to supply the demand. While it is true that at the present there exists a scarcity of marketable beeves, there is no immediate cause of alarm for the future output of our stock ranges.

For the present and until next fall beef undoubtedly will command a price considerably above that which has ruled for several years past. This has been brought about partially by the hard winter a year ago killing many of the calves on the ranges, and principally by the stockmen during a depression of the market on this coast letting go of many of their herds to large home and Eastern buyers—men who are always ready and have the means necessary to take the advantage of all bargains during dull periods.

To still better show that parties posted are not afraid of any great scarcity after the coming year, we have only to look at the price which Messrs. Miller, Lux and other large butchers and stock raisers are selling their calves for. The price of veal is no better in our market to-day than at any time during the last two or three years, while at the same time these men are buying all the cattle offered for sale at anything below the ruling price.

Viewing the movements of men who are experienced in this business, and thoroughly acquainted with the breeding ranges of this coast, we will be governed in our views by their actions, which go to show that although for the season coming beef may command a considerable advance over previous ones, yet in the future, while we may never see beef selling as low as formerly, we will be blessed with all that our requirements may need at rates that will pay the breeder and butcher yet still not harass the consumer.

While the present position of the market may be a hard one on a great many in this city, it is none the less so on our country neighbors for they have to pay higher prices for what they use than we, while many of them have their "salad covered with their own dressing." From this fact we expect to see the experience taken advantage of in the future, and then we will find ourselves supplied with an abundance and that of a quality far superior to what we now are compelled to use. The largest stock man on the plains to-day cannot go out and find all his beef cattle in one bunch but with his herders he first finds some in this valley, and more in the next; thus he works until he gathers his thousand or so of beef.

So it would be in our grain counties did the farmers give it the attention which the present wants of our population demand—not only with the benefit which they would confer on their city neighbors but with considerable profit to themselves.

There is scarcely a farmer on this coast who does not let go to waste or destroy enough provender to fatten several head of cattle and sheep when they, after curing or reserving enough to supply their own household during the winter, would by selling the remainder be well recompensed for the time and labor devoted to their fattening. When the time comes that they fully appreciate this fact we will then see our drovers gathering their hundreds and even thousands of beeves in the most thickly settled grain counties, and as ten head of cattle fattened on the farm are fully equal to fifteen of the average grass cattle, we will find that our markets will be bountifully supplied by a quantity and quality far better, and entirely independent of the millionaire stock raiser.

Diseases of the Hog.

Colman's Rural World says:

So far as we have been able to learn, either by reading or by practical experience, there is as little known of the various diseases of swine and the methods called for to successfully treat them as of any other one thing. In the treatment of disease, whether in the biped or the quadruped, we seldom, if ever, stop to ascertain the cause, and even more seldom ask the question: "What is disease?"

We find an animal sick and immediately jump at a conclusion; the disease is this or that, and calls for such and such remedies. These are at hand, or obtained, and applied at times with indifferent success; but successfully or not, the diagnosis is a blind one, and the treatment as "the blind leading the blind."

The disease called hog cholera is found all over the country, if we may believe the newspapers; but the indications of the disease are as varied as the causes are abundant, and yet we have remedies, advertised by otherwise reputable newspapers, proclaimed as a specific and sure cure. To believe any such stuff and nonsense is to make ourselves the tool and toy of the quack, and to blind ourselves to the first problem to be solved, viz: what is the cause of the disease? Having found this, the remedy will suggest itself.

The following from the Henry County (Mo.) *Democrat* is suggestive in this connection:

Although there is no hog cholera reported in the county yet farmers should keep the fact prominently before them that its appearance at any time is not impossible. Hogs are scarce, and high in price. Hogs sleeping in a pile of old and rotting heated straw, is one cause of hog cholera. Such bedding is warm and comfortable, but the poison generated by their heat is a fruitful cause of disease and death. We have no doubt but that impure, bad water has often had the same effect. Keeping hogs night and day in filthy pens is the worst kind of treatment for such stock, though we have seen hogs treated in this way where the owners seemed to think that it was a natural enough way to treat this kind of stock. It is pretty certain that in a general way hogs need a good deal better treatment than they get at the hands of those that have the care of them. In the winter season, hogs, like most other kinds of live stock, are often seriously injured by being improperly watered. Cutting a hole in the ice to obtain water is a bad way to water any kind of stock. It is especially so with hogs, as where they are made to drink a full supply of ice cold water, they are invariably injured by it to a greater or less extent. Hogs should at all times have pure well or spring water at a temperature of about 60 degrees.

Of the desirous qualities in a pig vigorous appetite is of the first importance, the next in importance is quietness in disposition.

Silos and Ensilage.

W. M. Vilas, Burlington, Vt., has a silo which is a lean-to to the barn. Cow stables for sixty head are about on the level of the bottom of the silo. The dimensions of the silo are twenty-five feet by forty feet with a depth of twenty-five feet. The wall on the bank end of the silo is twenty-two feet high and three feet thick. It is partially walled on two sides to protect it from the earth. Matched 1½ inch spruce boards were used in other parts of the walls of the silo. The walls were painted and plastered with cement. The cover of the silo is of rough two-inch plank. The ensilage is weighted with stone to the thickness of twelve to eighteen inches. Corn was planted in drills 3½ to four feet apart, about twenty-five quarts to the acre. Smoothing harrow was used until the corn was ten to twelve inches high, after which cultivator was used. The produce of fodder was from ten to fifteen tons to the acre, or an average of twelve tons. The fodder was cut ½ and ¾ inch long with two-horse power. Very little was cut as short as ½ inch as it made very slow work. In filling the silo it is important to have the fodder spread evenly and well packed as it is put in. If from six inches to one foot in depth is stored each day no damage will occur. The silo was opened about two months after filling; the ensilage was found in excellent condition, having a sweet smell similar to that of honey. Mr. Vilas states that where the ensilage has been cut down and allowed to stand exposed to the air for three or four weeks it will mould two or three inches into the fodder, yet the cows will eat it clean.

"Ensilage is better than anything else to winter cows on," says Mr. Vilas, "and perhaps the same is the case for summer feeding, but the latter remains to be tested. I fed ensilage from the middle of November until about the tenth of April. In a day or two after the latter date, my men complained that the cows were not giving enough milk for my regular customers, and even by doubling and tripling the quantity of grain, we were not able to keep up the previous flow of milk. All my other stock, as well as my cows, were eager to eat ensilage. The quantity consumed per head was from fifty to eighty pounds, my method of feeding was to give ensilage once a day, with from four to six quarts of bran and hay twice a day. When, another season, I have enough ensilage, I shall feed it twice a day, and hay but once. As to the condition of my stock it never looked as well as when feeding on ensilage. With no other grain than bran, seventy-five per cent. of my ensilage-fed cows could have been sold for beef and yet most of them were milked all winter. Whatever is grown for ensilage should be quite near the silo, since the former is too heavy to haul a long distance. Storing and feeding ensilage will pay better on a large scale than in a small way. The silo I used last year held only about 160 tons. This year I have enlarged its capacity to about 500 tons."

James S. Chaffee, Wassauc, N. Y., has a silo by the side of and parallel with his barn, and so arranged that the ensilage comes from the silo to the floor, directly over the animals to be fed—the barn being built against a side hill, and the silo placed on the upper side. The dimensions of the silo are 12½ feet by 50½ feet with a depth of 16 feet. The walls of the silo are concrete, of hydraulic cement, gravel and cobblestones; the cover was made of 1½-inch spruce boards, placed crosswise, and fitting loosely to the sides of the silo. The ensilage was weighted with stone, seventy-five pounds to the square foot. Including the roof the cost of the silo was \$350. Corn was the only crop used for ensilage, sown in drills three feet apart, and cut when fully tasselled and before any of the juices dried up or were appropriated for the formation of the ear. Mr. Chaffee produced from sixteen to thirty tons of green corn per acre, twenty tons being his average yield. Blount's Prolific proved the best for ensilage, and White Southern next best. The fodder was cut in one-half-inch lengths by a cutter driven by a five-horse steam engine. In filling the silo, the ensilage should be distributed evenly in the silo and packed as thoroughly as possible, putting in from twenty-five to thirty tons per day. After the silo is full a few inches of straw should be added before placing the covering planks. Eighty cents was the cost of filling per ton of fodder put in.

In this case two months elapsed before opening the silo. Mr. Chaffee writes: The ensilage loses its green color, but retains form and consistency, with no appreciable loss of moisture; has a slightly acid taste and alcoholic smell, with sometimes a very small loss at top from mould and decay. There was no deterioration in the quality of the ensilage after opening the silo. In feeding milch cows ensilage effects a saving of grain and forage, while cows thrive better under its use than without it. The milk is richer and pleasanter to the taste—more like produce from pasture than from hay and grain. I fed fifty pounds ensilage per day to each cow, sometimes alone in the feeding, but usually in connection with hay and grain. While feeding ensilage I noticed a decided gain in flesh, appetite better, hair sleek and glossy, and eyes bright. The excellent condition of my stock has attracted the attention and admiration of numberless visitors on the subject of ensilage. The profitability of ensilage lies mainly in the fact that it can be made to double the stock-carrying capacity of our Eastern farms, and that too at a very small comparative cost. Its advantages to the sale-milk dairymen are incalculable, and I see no reason why they should be less to butter and cheese producers. Dairy farmers who have used silos two years have already added fifty per cent. to their former stock.

GOOD POINTS IN SHORTHORNS.—A correspondent asks us to name points of excellence of Shorthorns. Mr. Allen, in his book on cattle, a standard authority, says: Muzzle fine and yellowish or drab in color, face, slightly dishing or concave; eye full and bright, forehead broad, horns, no black except on tips, and standing wide at base, short oval shaped and spreading gracefully out, and then curving in with a downward inclination, or turning upward with a still further spread, of a waxy color and somewhat darker at tips; the throat clean, without dewlap; the ear sizeable, thin and quickly moving; the neck full, setting well into the shoulders and breast, with a slight pendulous hanging of the skin (not a dewlap), just at the brisket; the shoulders nearly straight, and wide at the tops, the shoulder-points or neck-vein wide and full; the brisket broad, low, and projecting well forward, sometimes so much as almost to appear a deformity; the arm gracefully tapering to the knee and below that a leg of fine bone, ending with a rounded foot; the ribs round and full (giving free play to vigorous lungs), and running back well towards the hips; the chops full, the chine and back straight from the shoulders to the tail; the hip uncommonly wide, and level with the back and loin; loin full and level; rump wide; the tail set on a level with the back, small and tapering; the thigh full and heavily fleshed; flank low and full; the hock standing straight, (as in the horse) or nearly so; the hind leg, like the fore one, clean and sinewy, and the foot small.

Texas sheep raisers are agitating the project of shipping mutton North and East by means of refrigerator cars.

How Milk is Made.

That the animal organism is capable, under certain conditions, of converting various food elements into milk is one of the most familiar facts of nature. How the milk-producing glands perform their work remains to a great extent a puzzle. The later investigations and theories in this connection are clearly set forth by Dr. G. C. Caldwell in a recent issue of the *New York Weekly Tribune*, in answer to the question: "How is milk made?" He says:

The essential milk-producing part of the udder is made up of a series of ducts or tubes branching out from reservoirs at the head of the teats, joining one another at little sub-reservoirs, and separating and uniting again, till finally they end within minute organs called vesicles or follicles. Both Dr. Sturtevant, of the New York Experiment Station and Mr. Arnold have traced these ducts to their sources. These follicles are the fountain heads whence the milk is collected by the ducts and carried through one reservoir after another to the teat.

The three essential ingredients of the milk, beside the water, are the fat, in the form of minute globules suspended in the liquid; the casein, partly in solution in the water of the milk, and partly in solid grains suspended in the liquid; and the sugar, only in solution. Nearly all authorities agree that the formation of the milk is attended with a rapid production of new cells, very rich in fat, in the follicles; and the most generally adopted view is that these cells drop off and fall to pieces by what is called fatty degeneration, and that their investing membranes or cell-walls become dissolved; thus, especially, the fat of the milk is produced; and some think that all the constituents of the milk are really nothing but cell ruins, taken up by the water that must come directly from the blood, even if nothing else does, and conveyed away through the ducts and reservoirs to the teats.

But Dr. Sturtevant maintains that the fat globules of the milk are really the cells themselves that are so rapidly multiplied in the follicles—that each globule began as a bud on a parent cell in the follicle, grew and then dropped off, and was taken up and washed along by the water containing the casein and the milk sugar in solution, which has been transuded from the tissues. With him Mr. Arnold agrees. This theory requires that each milk globule shall consist of a membranous sac inclosing fat; but the existence of such a membrane or envelope around the fat globule is almost universally disbelieved by microscopists, for nearly all who have given the subject their careful attention failed to find satisfactory evidence thereof. It will be, therefore, a battle of a few against a multitude to establish the fact of such a structure of the milk-fat globule; but in a battle fought with such weapons the victory is not always with the party that is strongest in numbers.

Fleischmann, than whom there is no better authority on matters pertaining to milk, is not entirely satisfied with the theory that the milk is made up of cell ruins alone. He shows that if this were so, in the case of a good milk cow, the dry weight of cell substance broken down every day would be not less than 5.5 pounds, or more than twice the weight of the dry substance of the milk glands of a well-developed udder. While allowing that there is much strength in the position of those who argue for milk production by cell destruction, he claims that there must be some secretion or straining through, as it were, of a part of the substance of the milk, directly from the blood which circulates freely and abundantly through the glands.

But even with this partial acceptance of both explanations, we are not yet altogether enlightened as to the manner in which the milk is produced. Unquestionably, however, an important and a peculiar work is done in these glands; there is produced that mixture of the three essential ingredients of food—the albuminoids, the fat and the carbohydrates, which makes milk the type of a perfect food, and there originate those substances peculiar to butter fat, the butyric and its associates, which are not found anywhere else in the animal body. They distinguish this fat in a marked manner from any other fat, whether animal or vegetable, and enable the chemist to tell with unerring directness whether a sample called butter is butter or something else.

Food For Milk.

In every question pertaining to milk the cow should be recognized as all important. Since science has settled the question that milk is simply liquefied cells, and not a secretion from the blood, the capacity and excellence of the machine have become prominent. It has also simplified the question of profitable food for the cow during the milking period.

The supply of milk depends essentially upon the rapid growth of new cells in the milk glands. These cells consist largely of proteine. The casein and fats (cheese and butter elements) are formed from the proteine; hence profitable dairying must depend largely on the amount of proteine contained in the food and made on cheap food; where rations rich in proteine, are fed, such as clover and oil meal, the following results may be noticed:

1. A decided increase in the quantity of milk and very little shrinkage for a long time.
2. Considerable gain in the solid matter of the milk, as shown by chemical test, or by the increased butter and cheese production.
3. A gain in the quantity of the milk where fodders rich in carbohydrates and fats are given; the slight increase in quantity and richness of the milk is not due to any direct action these have, but to the assistance they afford the proteine in preventing its oxidation. Animals fed mainly on sugar beets, potatoes or corn will give considerable milk, but it is done at the expense of the proteine of the body, and after a while the animal will suddenly waste away.

In view of these well-established facts, what shall be the economical milk ration for farmers?

Calculated upon the basis of the amount of proteine contained in each, and taking corn as the unit of value, when corn is worth fifty cents per hundred pounds, the following articles will approximately be worth per hundred: Corn, 50 cents; oats, 60 cents; barley, 55 cents; wheat, 65 cents; wheat bran, 70 cents; oil meal, \$1.45; clover hay, 80 cents; timothy, 50 cents; potatoes, 10 cents.

This is not absolutely correct, because the carbohydrates and fat in some of these would materially aid the proteine and hence would be worth relatively more than above represented.

It is, however, sufficiently correct to show that the cheap foods for milk in Iowa are well-cured clover hay, wheat-bran with a little corn meal and oatmeal added.—*Prof. S. A. Knapp, in Iowa Homestead.*

L. S. Coffin of Fort Dodge, Iowa, a well-known sheep-breeder of experience, asserts that the sheep sold at the late Fat Stock Show by M. H. Cochrane of Canada were affected with foot-rot. Mr. Cochrane has not yet been heard from on the subject.

CONCERNING CREAMERIES.

One of the Most Successful American Dairy-men Gives some Valuable Information.

To those who are contemplating the building of a creamery and desire to know the cost and methods of construction, as well as the system of management, the following article by Prof. L. B. Arnold in the *Rural Home* contains many points of interest:

The first consideration in starting a creamery is a good, cool spring of water. A well will answer, but it is not so convenient, and it costs something to pump the water: besides it only runs when power is applied, while the spring is continuous night and day. Refrigeration is at the base of all creamery operations. Milk must be cooled, but the amount of refrigeration need not be as great as is often employed, though the lower the cooling the sooner the cream rises; it does not require an ice-cold temperature to separate cream successfully. The water from a cold spring of forty to fifty degrees is all that is required to cream milk while it continues sweet, and to do it perfectly. The water which would pass through an inch pipe ten rods long, with two feet fall, would do for 500 cows. More would be desirable, but even less would answer.

Two courses are pursued in creameries: One consists in making both butter and cheese, and the other in making butter only. The former is the creamery proper, and the latter more properly is a butter factory, but both establishments are almost indifferently called creameries. The plan of the building and the cost of outfit will be varied according to the work to be done. In the West, particularly in Iowa, most of the creameries make only butter. In the East, both butter and cheese are generally made. The latter, as a rule, is the more profitable course. Since the adoption of the system of cold setting, the milk when skimmed is perfectly sweet and sound, and in a fine condition for cheese making or any other use.

Skim cheese has shared in the recent improvements in cheese manufacture, and an article greatly superior to what was formerly supposed possible can now be made. A cheese in every respect better than the average whole-milk cheese, made in factories ten years ago, can now be made with the cream half out. A wholesome and fairly palatable and marketable cheese can be made out of average milk, from which three pounds of butter to the 100 pounds of milk have been taken, and more money realized from the milk than when full skimming is practiced or full-milk cheese is made. It requires more skill to make skim cheese than it does to make full-cream cheese, and if the maker has the skill and can make first-class butter also, he will be in a position to make a success of the creamery. Where the three pounds of butter are taken from a hundred pounds of milk, a fancy article of butter can be made that will generally bring as much as all that would be made from full skimming, as the last part of the cream that comes up is inferior and depreciates the butter.

The profit of running a creamery, as in most other kinds of business, lies in making only first-class goods of its kind. The cost of buildings will vary according to the material used in their construction, and the locality and the finish upon them. In most parts of our Eastern States buildings for the accommodating of 500 cows ought, if made of good wood, to be put up for \$1,000. They may be made to easily cost more, and possibly might be made for less. A room must be provided for setting the milk, the temperature of which can be controlled in all seasons, with a floor elevated at least three feet above the manufacturing rooms, so that the milk can be spouted to the vats for making cheese; an apartment for the cheese vats and presses; and a third for making butter, all of which must be on the first floor. A second story will afford room for curing cheese, and a cellar below for storing butter, but butter can be kept on the first floor if proper refrigeration is provided. If there is plenty of cold water, ice will not be necessary, but if not an ice house will be required. Ice is generally needed.

The expense for apparatus will vary with the mode of operation adopted. The best plan will call for an outlay about equal to the cost of a building, and will include a steamer and power for churning. If cheese is not to be made, the cost both of building and apparatus will be about one-fourth less.

The best mode of raising cream is not necessarily the quickest one. Cream need not necessarily be sour to make the best butter, but it must have some age and airing. If raised in twelve hours and churned at once, it will have neither the finest flavor nor the best keeping quality, but if the cooling is not lower than is required to bring the cream up in thirty-six hours, it may be churned when first skimmed, while sweet, and the finest butter, with the best keeping quality, will result. If any souring is to be done, nothing more than acidity enough to be faintly perceptible should be allowed.

The best plan for raising cream, and the one which most perfectly accords with the science and philosophy of butter-making, is the following: The milk is set in tin vats twenty inches deep but no more than sixteen inches wide, with the length variable as may be convenient. The upper half of each vat is surrounded by an envelope of water ten inches perpendicularly, and two or three horizontally. The water is run into the envelope at one end of the vat and passes equally along on both sides running out at the other end. The lower half of the vat is only surrounded with air, and it is all the better if the air is not very cool. This does the cooling at the top of the milk where it should always be done. The law discovered and published by me several years ago, that cream rises best when the temperature is falling, is now recognized and adopted by all careful-observing butter makers. When milk has reached a low temperature and it ceases to vary, the cream ceases to rise. The temperature of the milk must therefore be kept changing. These vats are perfectly adapted to this law. If the milk becomes reduced to the temperature of the water flowing round it, the vats are arranged to warm the milk a little at the bottom, either by steam or water, sending the warmed part up to the top to be again cooled and precipitated, leaving the cream at the surface. The changing temperature can thus be kept up indefinitely without the necessity of extreme refrigeration, which is unfavorable to the production of the best keeping and finest delicacy of flavor. Refrigeration is all important in butter making, but we may have too much of a good thing. Aeration is essential to cream while spread out on the milk, but airing does little or no good if the temperature is very low.

The churning, too, must be philosophically done. The cream must all be acted on at once and alike, as when it falls from end to end in a barrel revolving endwise, and the butter must be freed from buttermilk by washing it in a granular form, instead of working it out. These are points which must not be missed, if the best results are to be reached. No others pay. If the manager is posted in respect to the latest

improvements in both butter and cheese making, the erection of a creamery in any good dairy district is a good and safe enterprise, but if second-rate butter and white oak cheese are to be the products, a creamery is a good thing to let alone.

One other thing not generally customary in New York is important. This is in respect to delivering the milk. It makes patrons a great deal of trouble, generally, to deliver their milk, each one making a journey twice a day. Those having small dairies cannot afford to do it, and those having large ones are often so situated that they cannot conveniently attend to it, and if they are to begin with, changes are liable to occur, and the creamery loses its best patrons. A creamery or a cheese factory is always in jeopardy from the difficulty of patrons in getting their milk to it. To avoid this, the manager of the creamery should haul the milk and be allowed a reasonable sum for doing it.

These are the outlines, or salient points, to be kept in mind in the construction of a creamery. To enable one to give details the location, extent and kind of goods decided upon must be known. As a word of caution it may be remarked that the location and arrangement of the building should be made with special reference to convenience and cleanliness and pure air. Every needless step taken and every moment of time lost swell the cost of manufacture and militate against the success of the enterprise; hence, how to accomplish the most with the least labor and time, should ever be kept before the mind's eye of the designer. It is just as important to build well as to work well, and to do either successfully one must be familiar with the entire business, so that he can see in advance just what is wanted. If he has not knowledge from experience the next best thing is to visit establishments of the kind he proposes to erect, and study general structures and details.

Among the things to be avoided are the pail and pool system and the large pan system, as being too laborious and unsatisfactory; also all nooks and corners in which filth can lodge to swell the labor of cleaning or render the air of the building impure; and lastly, a site so level that a ready drainage is neither impossible nor difficult. It would be better to pump water from a well in a well-drained, dry and airy location, than to have the best spring imaginable with the creamery in a low, sunken and wet hole, always increasing in impurities and defiling everything with its contaminating emanations. Let the site by all means be on an inclined surface.

The Fat Stock Show.

The Fat Stock Show has been all that its best wishers could desire in the way of being a capital exhibition and attracting a large amount of patronage. In all the departments this year there was a most excellent display. The cattle department, perhaps, always draws the most universal attention and excites the most universal interest, and usually, we think, the competition results in the least general satisfaction to the exhibitors. There is a settled conviction on the part of a certain class of breeders that they have the best cattle in the world, and that any award that does not recognize this fact is evidence of deplorable ignorance or doubtful honesty. Such people cannot be made to see, and the most appropriate thing that can be said of them is that they are joined to their idols and must be left alone. Then there is another class that always think that the chances are against the recognition of the merits of their breeds, because, perhaps, their cattle are not so numerous as those of other breeds are. This class will never think of being satisfied with the result of any competition which is not clearly in its favor. And so the results of the competition in cattle exhibitions are far from being satisfactory to exhibitors. But the great public is not burdened with the prejudices that breeders are, and it studies all the circumstances and figures calmly, and gets pretty close to the accurate conclusion.

One thing ought to be a source of satisfaction to the cattle exhibitors at the late show, and that is that all the stock was sufficiently fine to make its breeders feel proud of it. The Herefords and Shorthorns were, as was expected, pitted against each other with all the energy that the belief of their respective breeders that each was the best would stimulate. The Shorthorn certainly showed at its best. The Hereford men had prodded the Shorthorn men to do all that their excellent breed would enable them to do, and we do not believe that the show of Shorthorns could be excelled in this or any other country. Those who saw it saw the best Shorthorns that can now be raised. The Hereford breeders were just as confident of the alleged superior innate merits of their cattle as they ever were, and claimed that on the butcher's block there is more to be left to tell the story of merit and profit. That the best may win is our wish, and we know that we are entirely free from prejudice.

The Polled Angus, several of which were on exhibition, attracted general attention, and furnished the first opportunity which many had had of examining this breed. The oddity of their appearance was pleasant to some and not to others. They have before them just such a contest as other new breeds have or have had. Their breeders must expect that they will have to encounter prejudice and the influence of larger numbers in other cattle, which is often a serious obstacle to the progress of new breeds. Breeds that have been longest in the country present the opportunity to select from a very large number, while the new breeds have few individuals, comparatively, and it is not always possible to make from them the most representative selections. The Polled Angus, however, we believe, have a good future before them.

The sheep, as noticed in another department of this issue, were very fine, and the exhibition of swine was excellent, consisting of all the various breeds, including the Jersey Red, which is a hog that we have always thought possessed considerable merit. Our readers are aware that they are a large breed, of red color, and the color is really the greatest objection that we have heard urged against them, and that is merely a matter of taste.—*Western Rural.*

Dr. Schmidt, Meulheim, has investigated the nitrogenous bodies in cow's milk about which so much diversity of opinion has hitherto prevailed. He says that three albuminoid substances are regularly present in the milk, viz.: casein, albumen and pepton. The average of seven analyses gave 2.43 per cent. of casein, 0.38 per cent. of albumen and 0.13 per cent. of peptons. Under certain circumstances the amount of peptons may increase until it equals that of the casein. The pepton is formed from the casein by a fermentative process; this ferment is destroyed by a boiling temperature, but its activity is not destroyed by salicylic or carbolic acid, so that in this respect it resembles the ferment that digests the albuminoids. Since milk, on long standing, may lose ten per cent. or more of its conversion into peptons, it should be made use of as fresh as possible when employed for making cheese.

Canned meat weighing not over four pounds can be sent through the mails as fourth-class matter.

The Shorthorn Sales of 1882.

That Shorthorns are holding their own in this country, as well as that the past has been a prosperous year, is evidenced by the fact that while the Shorthorn sales in 1881 averaged \$158 per head the average price this year has been over \$192 per head. The last public sale of the year was that at Dexter Park, Nov. 24. The sales for the year were as follows:

Grand Total.....3,420 "

An average of \$192 10.

The *Breeder's Gazette*, which compiles the above table, remarks: We are aware that the above is not absolutely complete. There have been in the course of the year probably a half-dozen minor sales, of which we have been unable to obtain reports. Were they all included probably the grand average would be slightly lowered. They constitute, however, a mere "drop in the bucket" as compared with the list above given, and could not possibly cause any material changes.

Feeding Pigs.

There is a popular idea that almost anything will do to feed pigs with, refuse of every kind being thrown to the pigsty. The wisdom of this course was illustrated in an action tried at the Swindon county court, England. Lord Bolingbroke's head keeper kept pigs, two of which he sold through an agent to a man in the village in which he resided. The flesh—the pigs were sold dead, by the carcass—appeared perfectly satisfactory, and was cured in a manner which was admitted to be proper, but when converted into bacon the produce had a most extraordinary smell and appearance, resembling, to use the language of some of the witnesses, the appearance and taste of tallow, and when exposed to the air turned yellow. It was not disputed that the pigs were well fed, and it was proved that they had been fattened on barley meal, but it was also admitted that the paunches of a large number of rabbits had been thrown to them, the result being that the flesh was impregnated with the peculiar odor attaching to rabbits and ground game generally. The learned judge was of the opinion that there had been no attempt to deceive in the matter, that the owner of the pigs had fed them upon the supposition that this kind of refuse would do them no harm. The result, however, proved the contrary, and the purchaser was recouped for his loss by a verdict of £4, being about half the original price. This should prove a warning to those who entertain the idea that any kind of food is fit for swine.—*English Exchange*.

It is a dangerous operation to cut off a cow's horns, especially to cut them off near her head. While the hemorrhage may not be such as to cause death, there are other dangerous results liable to happen from sawing off the horns at their base. The bony projections from the head, which form the support of the horns and reach far up into these, are hollow, that is, honey-combed, and these cavities connect with the cavities or sinuses of the forehead. Not only may serious catarrh of these sinuses result from thus being exposed, but the blood escaping into the cavities, and closing them up, may, by subsequent dissolution, cause troublesome chronic inflammation and ulceration of the delicate lining membrane, as well as of the bony structure.

An occasional application of a mixture of equal parts of kerosene, vinegar and fish-oil will eradicate the lice from swine.

THE DAIRYMEN'S CONVENTION.

California Naturally a Foremost Dairy State—Butter vs. Oleomargarine.

The BREEDER AND SPORTSMAN takes an interest in whatever affects the interests of breeders of good stock. The making of the best quality of butter—the making of any butter at all at a profit—depends upon having good neat stock, and the more profitable dairying becomes the more attention will be devoted to the breeding of high grade or pure bred kine. No state in the Union has better natural advantages for dairying than California. Her soil is so fertile as to make this the garden of the world, her climate free from the months of biting zero weather of the Eastern winter as well as from the melting, sweltering midsummer weather which, in the East, continues day after day and night after night, until the heavens seem of burnished brass and the earth a smoking furnace. Nutritious grains and grasses grow in almost tropical luxuriance, and the cost of feeding and caring for stock is reduced to the minimum, while the even temperature is exactly adapted to caring for and manufacturing milk, cream, butter and cheese. Gilt-edged butter can be produced the year round with 25 per cent. less labor and expense than in the finest dairies of Vermont or of the celebrated Orange county, New York. And it is so produced. California butter will stand comparison with the product of those crack dairy regions of New York and New England, and will not come off second best. While the bulk even of the best dairy butter of the East is shipped in firkins, the climate making it too expensive to ship in rolls, California butter almost invariably arrives in the market in rolls, put up the same as the celebrated "gilt-edged" butter of Orange county or Vermont which heads the New York and Water-town markets. All this is true, though the dairying interest in this State is yet in its infancy, and though Eastern butter is constantly being received in our markets. Yet in the matter of pure bred neat stock California can already claim a front rank, and it requires no enthusiast to predict that in a few years the balance of the butter trade between California and the East will be transferred to the other side of the ledger.

It is estimated that 6,000 men are employed in the dairy business of this State, that \$15,000,000 is invested, and that the annual net income is \$900,000. That is six per cent. on the money invested. There are a great many branches of industry that do not yield as much, and some that yield more, but nobody who has canvassed the subject can doubt that this net income may be doubled by intelligent improvement in breeding, feeding and caring for stock, in the manufacture of the best quality of products, and in skill and judgment in marketing them. Combination, association and interchange of ideas, plans and practice among dairymen, as well as the increasing attention given the subject by the press, will in time produce this result, and dairying will in a few years from now be one of the most profitable branches of business in this State. The idea would be preposterous that with our advantages of soil and climate we must long continue paying the Eastern farmer for butter and cheese which can be made at less cost here, and, added to this, the transportation charges on the same.

The dairying interest being, then, of such present and prospective importance in the State, the establishment of an oleomargarine factory in this city has aroused an interest and a discussion throughout the commonwealth. Nobody questions the right of the manufacturers to prepare clean, wholesome fats in any way they may see fit and place them upon the market under their right name. To put forth the manufactured article as dairy butter would, of course, be a fraud, and those States where it has been manufactured heretofore have passed laws requiring each roll and package to be plainly marked with the name of the article. The manufacturers in this city assert that they do so mark all their product, and that they have no desire that it shall do otherwise than stand or fall entirely upon its merits. But oleomargarine, after leaving the factory under the proper stamps and labels, may in a variety of ways be fraudulently imposed upon the public. The New York *Tribune* asserts that considerable quantities are sold to farmers in that state, by whom it is incorporated with genuine butter and the compound shipped to market as pure dairy butter. And certainly in a community like San Francisco, where the majority of people take their meals at restaurants, no law can be passed which will protect consumers from imposition if restaurant keepers see fit to buy the manufactured article, stamped and labeled though it be, and cut it into slices and serve it to their customers. Legislation is powerless here, and each individual must rely upon the protection furnished by nature in the organ of taste. That a large amount of oleomargarine is manufactured and put upon the market the manufacturers testify. Very few people can be found who knowingly consume any. But it must be consumed, and how? Surely by being eaten by parties who suppose they are eating dairy butter. This conclusion establishes two points: First, that it is so near like dairy butter as to be frequently mistaken for it by the consumer; second, that it is thus becoming a dangerous competitor of the dairymen.

To devise plans for meeting this competition the State Dairymen's Convention met in San Francisco last Tuesday. The delegates present were as follows:

San Luis Obispo, M. B. Mac, O. A. Tognazzini, L. Warden; Monterey, J. F. Dixon; San Mateo, R. Ashbruner; Fresno, B. Marks; Mariu, B. F. McClure, C. H. Smith, G. A. Hussey, A. H. Stinson, J. Riscioni, W. H. Abbott, F. C. De Long, Dr. Lyford; Sacramento, J. B. Green, Wm. Johnson; Sonoma, Godfrey Taylor; Del Norte, G. H. Kellogg, J. H. Hegler; Alameda, Judge John A. Stanley; Santa Clara, Wm. Quiun, M. M. Cahalan, Rush McComas; Santa Cruz, D. M. Pyle, E. A. Davison, H. Gushee, D. D. Wilder, J. Recipina, W. V. Gaffey and B. W. Reeve.

Mr. Gaffey called the meeting to order and John A. Stanley was chosen temporary chairman.

Mr. Stanley on taking the chair stated that he favored the passage of a State law prohibiting the incorporation of any company manufacturing any article which could be sold as the natural product of the dairy.

A motion was carried that all dairymen and all having an interest in the dairy business should be entitled to take part in the deliberations.

The temporary officers were made permanent, as follows: John A. Stanley President, E. J. Wickson Secretary, R. Ashbruner Treasurer, and the following Vice Presidents: Santa Cruz, Horace Gushee; Santa Clara, Colonel Younger; Mendocino, W. McClure; Fresno, B. Marks; San Luis Obispo, M. B. Mac; Monterey, John Hitchcock; Marin, William H. Abbott; Sacramento, William Johnston; Yolo, J. B. Greeu; San Mateo, Robert Ashbruner; Stanislaus, Samuel Miller; Del Norte, G. H. Kellogg; Sonoma, Hollis Hitchcock; Santa Barbara, A. Tognazzini; Humboldt, John W. Rodgers.

The following Committee on Legislation was appointed: Santa Cruz, J. Recipina; Santa Clara, Rush McComas; Mendocino, D. F. McClure; Fresno, C. Marks; San Luis Obispo, L. M. Warden; Monterey, J. F. Dixon; Marin, F. C. De Long; Sacramento, William Johnston; San Mateo, Robert Ashbruner; Stanislaus, S. Miller; Yolo, S. S. Hinsdale; Del Norte, J. S. Hegler; Sonoma, Hollis Hitchcock; Santa Barbara, A. Tognazzini, with Judge Stanley of Alameda as Chairman.

Theoretically the butter coming to market is in two-pound rolls. In practice, however, it is always two ounces short of the weight, and dealers will not purchase butter from the dairymen unless it is thus short as they would have to pay the dairymen by the pound in bulk and sell by the roll in competition with those selling short-weight rolls. A very sensible resolution, and one which it is to be hoped will be adopted and enforced, was offered by Mr. Gaffey, as follows:

"Resolved, That the Legislature shall be asked to enact a law that the true weight shall be stamped on all rolled natural butter offered for sale to the public."

Such a resolution is very appropriate, coming from a convention whose object is to compel the oleomargarine men to properly stamp their products. It will come up for action at the next meeting.

After discussion it was decided that the meetings should be open to press reporters.

Mr. James Wilson, interested in the manufacture of oleomargarine, addressed the meeting by invitation, claiming the product to be very similar to butter and asserting that the manufacturers desired it to stand or fall on its merits, and had no disposition to put it forth under false colors.

The meeting adjourned to 9 a. m. Wednesday.

On Wednesday the following persons paid the annual fee of \$1 each and signed the membership roll: John A. Stanley, San Francisco; Robert Ashbruner, Baden, San Mateo; Coleman Younger, San Jose; M. B. Mac, San Luis Obispo; M. M. Cahalan, San Jose; Rush McComas, Santa Clara; D. M. Pyle, Gilroy; E. A. Davison, Gilroy; O. Harvey, Sacramento; Horace Gushee, Santa Cruz; D. D. Wilder, Santa Cruz; William Johnston, Richland, Sacramento; J. Respiui, Santa Cruz; W. V. Gaffey, Watsonville; B. F. McClure, Point Arena; J. F. Dixon, Salinas; W. H. Abbott, Olema, Marin; F. C. De Long, Novato, Marin; Dr. B. F. Lyford, Marin; A. Lagnazzini, Santa Barbara; C. H. Smith, Point Reyes; Hollis Hitchcock, Valley Ford; G. A. Hussey, Point Reyes; C. H. Stinson, Point Reyes; Samuel Miller, Stanislaus; G. H. Kellogg, Crescent City; J. M. Greene, Richland, Sacramento; Joseph Bloom, Olema, Marin; John Hitchcock, Monterey; J. W. Grigsby, Napa; J. Mitchell, Marin; N. Muace, Nicasio, Marin; J. R. Hebborn, J. D. Carr, H. Mayers, Monterey; Charles L. Estee, Marin.

The following draft of an act was adopted and the Legislative Committee, which consists of one member from each county represented, was continued in office and directed to use its endeavors to have it made a law by the Legislature at its next session:

"Section 1. It shall be unlawful for any person or corporation in this State, in the manufacture of the article or substance commonly known as 'Oleomargarine' or 'Oleomargarine Butter,' to mix or incorporate therewith any part or portion of butter, the legitimate product of the cow; or to put upon the market, or sell or offer to sell, any of such substance commonly known as 'Oleomargarine' or 'Oleomargarine Butter,' in the form of rolls or cubes commonly used in this State by dairymen for the marketing of butter.

"Sec. 2. Every person who shall manufacture for sale or who shall offer or expose for sale any article or substance in semblance of butter, not the legitimate product of the dairy and not made exclusively of milk or cream, but into which the oil or fat of animals not produced from milk enters as a component part, or into which melted butter or any oil thereof has been introduced to take the place of cream, shall distinctly brand, stamp or mark in some conspicuous place upon every package of such article or substance the words 'Oleomargarine,' in plain letters, not less than one-fourth of one inch square each; and in case of retail sale of such article or substance in parcels or otherwise, the seller shall, in all cases, deliver therewith to the purchaser a printed label, bearing the plainly printed words 'Oleomargarine,' the said words to be printed with type, each letter of which shall not be less than one-fourth of one inch square.

"Sec. 3. Every person dealing, whether by wholesale or retail, in the article or substance described in Section 2 of this Act, and every hotel or restaurant keeper, or boarding-house keeper, in whose hotel, or restaurant, or boarding-house, such article or substance is used, shall continuously keep conspicuously posted up, in not less than three exposed positions in and about their respective places of business, a printed notice in the following words, viz, 'Oleomargarine sold here,' the said notice to be plainly printed, with letters not less than one-half of one inch square each.

"And each and every hotel keeper and restaurant keeper, boarding house keeper or proprietor of other places where meals are furnished for pay, who may use in their respective places of business any of the article or substance described in the second section of this Act, shall, upon the furnishing of the same to his guests or customers, cause each and every guest or customer to be distinctly informed that the said article is not butter, the genuine production of the dairy, but is 'Oleomargarine.'

"Sec. 4. Every person, or director, trustee, officer, or agent of any corporation, who may violate any provision of this Act, shall be guilty of a misdemeanor, and upon conviction thereof shall be punished by a fine of not less than fifty dollars nor more than five hundred dollars, or by imprisonment for not more than three months, or by both such fine and imprisonment; and it shall be the duty of the Court trying said offense to order the payment of one-half of the fine imposed to the person giving the information upon which the prosecution was based and the conviction had, and such fine may be collected by execution, as in civil cases."

A resolution to boycott all dealers in oleomargarine was tabled.

A committee was appointed to confer with dealers and see if the present charge of half a cent per pound for casing cannot be done away with.

Mr. Gaffey's resolution to ask for a law compelling makers to stamp the weight on each roll of butter was amended to call for the use of a uniform mould. The amended resolution was then tabled.

After an executive session the convention adjourned, subject to the call of the chair.

ROMERO AND OVERMAN.

This afternoon on the Bay District Course will decide the match between Romero and Overman, and whichever of these famous cracks can win the necessary three heats will be rewarded by a large sum of money.

It is conceded that these two flyers will make a closer contest than any others in this State, and there is a great diversity of opinion among the experts as to which will gain the victory. So far the betting has been so nearly even that there is no pronounced favorite, and though Romero had "slightly the call" at the opening of the pool sales on Wednesday night, this arose from a majority of the speculators being better acquainted with his late performances than the doings of Overman. There is only a second difference in the record of the two, that being in favor of the grey. Still 2:19½ and 2:20½ are so near the same notch that the difference is overcome by the slightest shade of good or bad luck. One thing in favor of Romero is his capacity to go at a great rate of speed as soon as the word is given, and this enables him to choose a position if the lottery that governs the placing at the start is adverse. But even that entails extra effort, and when a horse has to trot around another on the turn, if even he has sufficient speed to "take the pole," there is a strain which the luckier has not to endure.

There is no question regarding the capacity of Overman to wind up the mile fast, and at Buffalo in two different heats he came from the half-mile pole in 1:07 and 1:07½. In all his races from the opening of the "grand circuit" he close of the season he showed to be a good horse. At Cleveland he won the fourth and fifth heats in 2:24½ and 2:25, coming from the half in the fourth heat in 1:10, and at Buffalo, after losing the first heat to Abe Downing in 2:20½, he won the others in 2:20½, 2:23½, 2:24½. Then he won at Rochester, beating Abe Downing, Yellow Dock and others, and at Poughkeepsie he won a hard race of six heats, one of which was "dead" between himself and Independence. The culmination of his very successful Eastern campaign was the winning of his match against Helene at the Gentlemen's Driving Park, New York. He was also matched against J. P. Morris for \$2,500 a side, but Morris paid forfeit, and at that time Veritas of the New York *Spirit of the Times* thus described him:

Overman is a lofty chestnut gelding, a year younger than Morris; he stands 16½ hands, a very resolute trotter, with a daisy-cutting stride, and little knee action. He was bred in California, and brought East with St. Julien, but change of climate and an attack of pinkeye threw him out of condition in 1881, and he suffered from a recurrence of the pink-eye last spring, but, recovering his form in the Grand Circuit, he showed such speed and strong finishes that good judges said he was then fit to trot in 2:17 or 2:18. He was beaten only a neck in 2:20½ at Buffalo and won the next heat in 2:20½ and the race in 2:23½, 2:24½ as he pleased, over a large field of horses. His last race was at Belmont Park, Philadelphia, on Thursday last; he won it easily in straight heats. Time, 2:22½, 2:26½, 2:26.

It is scarcely necessary to refer to the races of Romero in this connection further than to say that he has given evidence of steady progression, so much so that those who have watched him the most closely are of the opinion that he can trot as fast as Veritas claims for Overman. He is certainly a wonderful young horse, and should no mishap befall him is very likely to take the first place in the stallion record. It is also sure that no horse ever trotted so fast under the same circumstances, as in the early part of his life he was subjected to treatment which was not well calculated to give him a fair chance. That history, kindly furnished by his breeder, H. M.

Johnson, appeared in the *Breeder and Sportsman* some time ago, and in it can be found all of the particulars.

No one who has the least fancy for the sports of the track can afford to miss witnessing this match. Unfortunately before it was consummated we made an engagement to be in Sacramento on Saturday and therefore our absence is compulsory. There is another feature of the match which will add to the interest, that being, Hickok and Goldsmith will be the pilots. With speed in the horses and the best talent in the sulkies, the race cannot fail to be highly interesting.

NEW YEAR'S NUMBER.

We shall publish on Saturday, the 30th instant, an illustrated number of the *Breeder and Sportsman*. That is there will be two very fine illustrations, one of them a colored lithograph of the celebrated young trotting stallion Albert W, and a lithographic copy from the original painting of "Boys in Trouble," by our artist, E. Wyttenbach.

We have not the least hesitation in promising that both of these will be superior to anything offered by any other paper of this class, and will be "works of art" in every respect. The painting has elicited warm ecomiums by every one who has seen it, and we were so highly pleased that we induced Mr. Wyttenbach to delay sending it to New York until the copy was made. There is no necessity of informing those who have seen the *Breeder and Sportsman* since the commencement that Mr. Wyttenbach has a remarkable talent for portraying the horse. In our estimation he has not a superior and scarcely an equal in that line, and he is equally happy in depicting all kinds of animals.

The painting also shows that he is a fine colorist, though the great charm, at least to us, is the remarkable fidelity with which he has delineated the horse, dogs and boys. It is not the intention, however, at present, to give a description of the picture, though we can assure our readers that the lithograph will be cherished by all who receive it.

The chromo of Albert W is by another San Francisco artist, Buchler, and is further proof of the talent that is met on this side of the continent. It is a capital representation of the famous colt, and as it will be accompanied by a full description of both sides of his genealogical tree it will be a sort of epitome of the doings of the Electioneers and Trustees on this coast.

The letter press of the New Year's number will be, in the main, peculiarly Californian. At the present time it is difficult to say exactly what the subjects will be. A story of the early days has been secured, and it has the merit of having a solid foundation of facts to sustain the interest.

Then it will be near enough the close of the year so that one can give a review of what our horses have done, and though 1882 may not have supplied the the sensational events of last year, there is enough to justify the claim that the Pacific Coast is sure to take the first place in the race for the great prize in breeding fine and fast horses. This view we have persistently adhered to, even when those who had lived among the advantages a score of years before our advent were dubious about it, and to have the correctness proved is not only flattering to what our old and good friend "H. B." terms the satisfaction of saying "I told you so," but it also gives the people now a better appreciation of what they should be thankful for. Again, the 30th of December will bring to a close the first volume of this paper. A circumstance of unusual occurrence connected with it is the fact that in this half-yearly volume are twenty-seven numbers.

The first volume is an era in the life of a newspaper. It is a mark of virility, a token of a healthy life, an indication of vitality which augurs a healthy future. We are pleased to state that so far we have met with a support that may be termed enthusiastic. The paper has found friends in all sections, and from every quarter come words of encouragement. But we are anticipating the greeting that more appropriately belongs to the "New Year," and with the assurance that we cordially and sincerely thank those who have taken so much interest in our venture, and that we are determined to do everything in our power to merit a continuation of their favors, we defer further remarks.

OLD THAD.

As will be learned from an advertisement in the appropriate column, Thad Stevens will be located the coming season at Agricultural Park, Sacramento. This horse has always been a favorite of ours, and it will be singular if he does not prove a successful sire. A third heat in 1:43½, and a second heat of four miles in 7:30, is a guarantee that the progeny will be likely to excel, and then his blood, is an element of value not to be overlooked.

FINE PHOTOS OF CATTLE.

Last week we published a letter from Orestes Pierce, of Saddleback, East Baldwin, Maine, in which he alluded to photographs of his Jersey cattle.

These pictures have been received, and they are without exception the best specimens of the art of cattle picturing we have ever seen, when the sun and camera were called into requisition. They are remarkably life-like, and though Belle of Middlefield is the subject from which was taken a capital wood cut published in the *Rural New Yorker*, it is scarcely as pleasing a picture as those that have the benefit of the contrast in colors.

As Mr. Pierce writes, "it is considered in New York one of the best wood cuts of an animal yet printed. You will see that it is not as fine as yours." It is well worthy of the encomiums bestowed, and to have the illustrations in the *Breeder and Sportsman* pronounced superior is praise enough. The Jerseys are good subjects for photographic illustrations, and though there has been a craze in the last few years for those of "whole colors" our preferences are for those which are relieved by patch-of white. There are strange conceits regarding white in horses, and this may be one cause why the cattle fanciers have fallen into the same fancies.

The old jingle, "one white foot buy, two white feet try, three white feet go without him, four white feet and a white nose, cut off his head and feed him to the crows," has probably prevented many a first-class animal from having a chance to display his merits. Lexington, and scores of others, have proved the fallacy on the race-course, and some of the greatest animals, in milk and butter producing qualities, are well marked with white. There are five of the pictures, two of them apparently dark fawn with light muzzles. Belle of Middlefield is of the light fawn, and "Mother" and "Son" have a good proportion of white. The work is done by Schreiber & Sons, and is assuredly a fine specimen of that kind of art.

APPOINTMENT OF L. J. ROSE, DISTRICT BOARD OF APPEALS.

We are much pleased to learn of the election by the Board of Review of L. J. Rose to fill the vacancy in District Board No. 5, occasioned by the death of Colonel W. Wilson, of San Jose. In our estimation Mr. Rose is in every respect well qualified for the place. He is identified with the trotting interests of California, and has done his share to place the stock of this State in the prominent position it now occupies. He has a clear understanding of the rules and a logical turn of mind, which will enable him to see through the petifoggish schemes that are sometimes brought into play to secure a wrong decision. There will be no favoritism in his awards, and the poor have an equal show with those of high station. Then it was eminently proper that the southern portion of the State should have a representative in the Board; and while this is granted, the drawback of non-attendance at the meetings is obviated, as the business of Mr. Rose compels frequent visits to San Francisco, and the meetings of the Board can be timed so as to take place during his sojourns in the city.

That there will be general satisfaction over the election of Mr. Rose is beyond question, and he and the Chairman will give a confidence heretofore completely lost. Although there has been a long delay, now that there is a chance for fair ruling, the lessons of the past may be beneficial.

A HUNTING SKETCH FOR NEW YEAR'S.

We have the promise of a hunting story from Dr. E. H. Pardee, which will be one of the most pleasing features of the New Year's number. The doctor is as much at home among the mountains and woods as he is in the scientific department of rifle shooting, and the story of his trips will be an exceedingly interesting history of California sport. He is so much attached to his annual shooting vacation that he could not be persuaded to take the place of President of the Golden Gate Association for the third year, as the time he had to give to the business of the society interfered with his summer excursion. At any other time of the year he was willing to give "time and money" to further the interests of the association, but to break into his "life in the woods" could not be endured, and to be compelled to leave the forests and streams when the game was the most plentiful, and the salmon and trout in the best condition, was not to be thought of. Dr. Pardee being a "pioneer," he has an acquaintance with the field sports of California complete and thorough, and this joined to just as complete a knowledge, scientific and practical, of the rifle, makes whatever he writes interesting and instructive.

HON. JAMES McM. SHAFTER AGAIN.

Now that the Honorable James McMillan Shafter has seen fit to turn the discussion as to the propriety of his retaining his place on the Board of Appeals, known by the title of District Board No. 5, into a personal attack upon us, he has given the opportunity to state more emphatically the objections there are to his retaining that position. Heretofore we have confined the charges to incompetibility, unfitness arising from his peculiar temperament, a domineering, arbitrary disposition. Syco-phantic in one case, overbearing in another, either unable to comprehend the most simple rules or with a determination to twist them to suit his own views. His late pronouncement absolves us from restricting the consideration to the manifest want of ability to perform the duties of a judge or arbiter, to take broader ground, and from his past conduct prove that he is also unfit from his connection with doings which a man of any honor would scorn to be partner in.

It is unnecessary to go over the ground previously argued. No amount of legal sophistry, a whole page of falsehoods will not remove the load of opprobrium he labors under. While we would have preferred to have limited the accusations to his delinquencies immediately connected with trotting affairs, our duty compels us to bring other matters forward to make his unfitness so palpably apparent that no one can mistake the bearing. He has set the example of bringing personalities into the argument, and though we cannot afford to surrender the dignity of position in the manner he has, we should esteem it a culpable dereliction if we fail to show how utterly unworthy he is of the place he occupies. The welfare of the sports of the turf and track is the ruling motive. This being of far greater importance than the gratification of private feelings, and to accomplish the object it is necessary to show that his attack in all the major points is totally devoid of truth. In the first place we will give some more illustrations of what he has done, and after that direct some queries to him individually.

The only instance we are acquainted with of his taking a part in the rulings of District Board No. 5, before the late Embryos, was the case of Bonnie in the Stanford Stake. The facts curtly stated are as follows: Palo Alto named five colts in the Stanford Stakes, which closed the first of January, 1881. To make good the nomination, another \$100 was due on the first January, 1882. Acting as secretary pro tem, we received a letter dated Palo Alto, Dec. 26, 1881, as follows:

Palo Alto makes second payment in Stanford Stakes of 1882 on Ismia, Hattie Crocker, Clay, Benefit.
H. R. COVEY, Superintendent.

The envelope also contained nominations in the Stanford Stake of 1882, and was postmarked San Francisco, Dec. 30, 7 a. m., 1881. Bonnie was one of the original nominations, and on the third of January we received a letter of which the following is a copy:

PALO ALTO, Jan. 1, 1882.

J. C. SIMPSON, SECRETARY OF STANFORD STAKES, Dear Sir: Palo Alto makes second payment on Bonnie in Stanford Stake to be trotted 1882.

This was in a Wells, Fargo envelope stamped Menlo Park, Jan. 2.

On the 6th of January we went to the office of Capt. Smith, and presented a list of those who had made the second payment, explaining to him the status of the Bonnie entry. He at once decided that it should be rejected and so it was indorsed. Beside the four from Palo Alto these remained in: E. A. Miller Jr.'s Adair, J. B. McDonald's Brigade, A. Waldstein's Nellie W and Jos. Cairn Simpson's Anteeo. The list was published in the *California Spirit of the Times* of January 14, and in the article accompanying it was the following sentence: "There are some singular circumstances in connection with this stake. Palo Alto had five nominations and four of these are left in and it was only by a mistake in not including in the communication the other that she was left out. The absentee is actually the fastest of the five, but a rigid construction of the rule was considered enough to bar her."

Thus the matter was disposed of until some time in June when we received a letter from Mr. Covey in regard to the eligibility of Bonnie, and it was answered that the entry had been rejected, and the only way to remedy it was to bring the question before the District Board. We also notified the chairman of the Board when the meeting was called to discuss the question to let us know, and we would notify the parties interested, viz: E. H. Miller Jr., J. B. McDonald and A. Waldstein, and bring the letters and papers in relation to the case. The first intelligence was the following letter:

SAN FRANCISCO, July 10, 1882.

MR. JOS. CAIRN SIMPSON, Dear Sir: In the matter of the appeal in the case of the bay filly Bonnie, wherein the second payment in the Stanford Stakes was refused, the Board of Appeals met July 10th, there being present Mr. J. McM. Shafter and N. T. Smith, and on the presentation of the facts of the case it was decided that the payment must be received and that the entry is not forfeited.

The facts as shown were that the second payment was due

on the 1st of January, 1882, that the Treasurer received the letter dated January 1st, making the second payment on the morning of the 2d of January, and the Secretary received a letter dated January 1st on the 3d of January, that according to the custom and the law of this State, where an obligation matures on Sunday or a holiday it may be performed on the first business day thereafter.

All the evidence showed that the intention of the payment was real and manifest, within the legitimate time, and must be so decided.

The Treasurer was instructed to receive the money and give notice to the owner of the filly Bonnie that the entry still stands good. Yours truly,
N. T. SMITH.

All the papers were in our hands, and so the above decision was reached without even an *ex parte* statement to base the award on.

We acquainted Governor Stanford that we should enter a protest against the starting of Bonnie, and though at first he was inclined to place a good deal of weight on Mr. Shafter's opinion, as soon as the true state of the case was made apparent he acquiesced in the view which Captain Smith and we had taken at the time, or within a few days after—the 6th of January—and started Clay in the stake. We were delighted with the manner with which Governor Stanford acted. Annoyed at first that there should be anything in the way of his fastest colt starting in the stake, the most important of any in California, when made acquainted with the objections he cheerfully surrendered the point although it was sustained by "forty-two years practice at the bar."

It is only necessary to copy the rules bearing on this question to show how entirely at variance the decision was with the code, and when a person who claims to be particularly well posted makes such a ruling there can only be one inference.

The rule which governed at the time is Sec. 2, Rule 2. The convention that met in February last, amended that rule so that it is now different though, of course, the amendment cannot be held retroactive.

Sec. 2. All entries not actually received by the member as aforesaid, at the hour of closing, shall be ineligible, except entries by registered letter bearing postmark not later than the day of closing, or entries notified by telegraph, the telegram to be actually received at the office of sending at or before the hour of closing, such telegram to state the color, sex, and name of the horse, and the class to be entered, also to give the name and residence of the party making the entry.

Having occupied so much space to give a clear understanding of the Bonnie case, we will defer the rest of the showing. Our friends, however, need not think that we are shirking the task. Although it is unpleasant we will give the history of the Haddington race at the half-mile track, the action of the State Board when Mr. Shafter was president, the Santa Cruz decision, the San Jose troubles, as all have a bearing on the question at issue.

Those directly and emphatically point to his unfitness for the office he holds, and as far as the personal matters we shall clearly show who is the one to make statements "known to be untrue."

EDITORIAL NOTES.

A New Blind Bridle will be found among the advertisements, and having given it thorough trial we are satisfied that it is really "an improvement." The line of vision is controlled and that without interfering with the eye; with an ordinary blind there is continued trouble. On one side it will flap against the eye, on the other it will stand at right angles to the cheek. The horse will look over or under it, and should he raise the bit in his mouth the "cheek pieces" will be thrown up and a vacant space be left. From experiments we are also satisfied that the action can be modulated by a change of the blinds. The straps attached give the power to regulate, and by turning the winker up something of the same effect is produced as by blindness. The animal cannot see the ground and lifts the feet higher to avoid mishaps. It may be that a contrary method will induce less knee-action, though we have never had the opportunity to test it, as all our horses have little bending of the knee.

The Big Match on the Bay District Course this afternoon between Romero and Overman continues to be the absorbing topic of conversation among all those who have the slightest fondness for the sports of the track. The speculation is brisk, and there is likely to be more money finding than there has been on any trotting match since the "days of old." Wednesday night Powers was slightly the favorite, Thursday night Overman had the pride of place with the bettors. Not the least attraction will be the presence of the Princess Louise and the Marquis of Lorne, as there has been an announcement that these august personages will honor the track by witnessing this peculiarly American sport. The whole of Europe might be ransacked without finding two such horses, and it is nearly as safe to assert that the whole of the United States cannot show two that are likely to show a more exciting contest.

The Palo Alto Youngsters have returned safely from the victorious campaign on the other side of the big hills. They return without a single defeat to dim the luster of their fame, and only one heat to charge to the debit side of the account. It is stated that the Kentuckians are making vigorous preparations to give them a warm welcome next year, and though there is no fear of supineness on the part of those who have the honor of California to sustain, it is also certain that the enterprising breeders of the blue grass coun-

try will improve on their past records. This is just as we would have it. There are hard fights in the future; the harder the better, as victory in that case is not an empty name.

The Choice of the Bettors is not to be relied upon as a true augury of how the race will terminate. The amount of money is the regulator, and if there are ten thousand dollars to be put on one horse, and twice that sum on another, the odds must finally be adapted to circumstances. That there will be changes before the race is concluded is almost positive, and it may be startling changes. There are, at times, stampedes and a desire to "get out" of what appears to be a "bad fix," and at such times men are apt to lose their judgment. Pool-selling intensifies the demoralizations, as the excitement of bidding, heightened by the auctioneer, has a dramatic force unknown to "out of hand" wagering.

A Good Idea is that of Col. Lewis M. Clark, President of the Louisville Jockey Club, who is adding a "straight run in" of three-quarters of a mile to the course at that place. Men are engaged in the grading, so that it will be in readiness for the spring meeting. It is also contemplated to extend the new course to 1½ miles, the additional half mile being on an easy curve. The *Turf, Rod and Gun*, published at Louisville, says that the ground is admirably adapted for the purpose, and this being the case the new course will certainly be a "grand improvement" for the decision of the dashes within the distances embraced.

Our New York Letter gives the latest intelligence from the metropolis, and though at this season "sporting matters" of nearly every description are at a stand-still in the land of frost and snow, our correspondent handles the little there is in an entertaining style; he lived for some time in San Francisco, is in a position to know what will be of the most interest to Californians, and is so situated as to obtain the most reliable intelligence of whatever is going on in that busy hive.

YACHTING.

The Chicago club is one of the youngest in America, but has made advancing strides in the past season that would satisfy any lover of yachting and yacht clubs. A complete organization, with officers thoroughly awake and pushing, caused the good results. The club has secured a fine club house for their quarters, located on the "lake front," with a commanding view of the basin and the lake. A flagstaff enables the club to work one of the most perfect systems of signals yet seen, and add usefulness to its beauty as yachting headquarters. Three of the best schooner yachts on the lakes, one being the famed Countess of Dufferin, and a number of first, second and third-class sloops, with several small schooners, make up the fleet.

Work on the Spreckels yacht is rapidly progressing. Half a dozen joiners are at work in the cabin which will be the finest finished of any on the coast. All but the ceiling will be in hard woods of rare varieties and the ceiling will be carved work. No money is being spared on this yacht.

The big yacht Montauk which showed so much speed last season was a new yacht. She made the best time over the N. Y. Y. C. course ever made. It seems, therefore, that the charge that Americans were on the back track in yacht building was not true.

In the proposed race to the Sandwich Islands between the two large yachts now being built, there will be really two trials, one off the wind, down, and the other a beat back. There will be two prizes, one for each run.

There is again talk about a National Yachting Association. When one was organized two years ago the right people did not seem to get hold of it so it failed to be a permanent institution.

The N. Y. Y. C. has for the present given up all idea of a club house near the water. They have fine club rooms in New York city.

The mast saddles, jaws for gaffs and booms, box for wheel and all the blocks on the Spreckels yacht are made of tomato wood.

The forty-foot schooner being built by Stone is all planked up and it will not be very long before she will be ready.

Farmer has finished a new plunger for Lake Merritt. She has a low freeboard but it is a fine looking little craft.

The Larchmont Club is to have a yawl among its yachts. The rig is slowly being recognized in the East.

Very little is going on among the yachtsmen now, the days being short and the winds very light.

They are building Mr. Tevis' new yacht at a yard on Chan-Street near Capt. Turner's place.

A number of new members have been taken into the San Francisco Yacht Club lately.

The Lotus Club is going to have the Whitewing next season, so it is said.

Edward Hanlan of Toronto, champion oarsman of the world, and John A. Kennedy of Portland, Me., met at the office of *Turf, Field and Farm* last Thursday afternoon and signed articles of agreement to row a three-mile-with-a-turn race for \$2,500 a side. They deposited \$1,000 forfeit with Hamilton Busby of the *Turf, Field and Farm*, and \$1,000 more will be put up on May 1st next, when a referee and the place of contest will be agreed upon. The final \$500 is to be put up on May 25th. In case no referee can be agreed upon the stakeholder will act. All the moneys deposited will be forfeited in case either fails to fulfill the articles of agreement, which are ironclad. Kennedy returned to his home on the train to-night. Hanlan returns to Toronto on Monday.

Dr. Protheroe's ostriches have arrived, and it is understood that they are to be established on Mr. Sayer's ranch in Fresno county, instead of in San Bernardino county, as stated last week, though the arrangements are not yet complete. The cost of the twenty-two birds—ten males and twelve females—laid down in San Francisco is \$20,000. It is expected that they will begin to yield an income from sale of feathers in about two years.

In feeding sweet milk to pigs, trials made at the Wisconsin experiment farm showed that on an average four pounds of corn meal were equal to twenty pounds of sweet skim milk, if fed separately.

THE KENNEL.

Dog Dealing.

The breeding and sale of dogs of all varieties has within the last few years become an extensive if not lucrative business. The great increase in the number of sportsmen has brought a corresponding increase in the demand for good field dogs, and the requirements of fashion, capricious in this respect as in all else, have opened a large market for the sale of non-sporting dogs.

Scarcely a decade ago, the gentlemen who would have charged a friend or brother sportsman a money price for a puppy from his favorite bitch would have lost caste. Dog dealers of the olden time were not sportsmen, and the business was confined to a class that neither sought or expected recognition as gentlemen, while he who would have asked or received pay for the services of a fine dog would have been ostracized at once. In those days the owner of a well-bred bitch at whelping time was so much more fortunate than his brother sportsmen in having puppies to give his friends; no thought of their sale ever entered his mind. And this condition applied not alone to sporting dogs, but to the non-sporting as well.

This is all changed. We do not mean to assert that dogs are no longer presented by one friend to another, but only what was once the rule is now the exception, and he who makes such a gift at the present day intends it as a mark of high esteem, or it is the natural outcome of a close and friendly intimacy between the donor and receiver. As a rule, he who desires to possess a well-bred dog goes into the market as a purchaser, and pays a good round price, whether he buys from friend or stranger. And why should this not be so? Men seldom give away pedigreed horses, and not often do we hear of fine cattle changing owners except by barter or sale; then why should sportsmen donate well-bred puppies with a fixed market value to a chance acquaintance or as a neighborly act? We may sigh at the recollection of the extinct liberality of the past, especially if we lack canine ownership, but we can hardly expect neighbor Jones, who is fortunate enough to own a well-bred bitch, to invite us over to take the pick of the litter at weaning time.

Dogs of the present day have a market value as well settled and determined as a racer, a trotter, a Shorthorn or a Hereford. Their numbers have increased an hundredfold over a period of twenty years ago, but the demand has more than kept pace with it. Breeding kennels are established in every state in the Union, and a large amount of capital is invested in them. Pedigrees are registered, and studied with a view to the improvement of the variety which it pleases the breeder to fancy, and large stud fees are paid to secure the services of some noted dog. These customs existed not in the olden time, neither would they to-day but for demand for the produce.

We have said that dog dealers of the olden time were not sportsmen. We write of them as a class. We do not say that all dog dealers of the present day are sportsmen, but we do believe a large majority are. A gentleman can now offer the services of a fine dog in the public stud and still retain his right to move in polite circles; he may advertise a litter of well-bred puppies for sale without forfeiting his claims to gentility, and as a result of this change from the old order of things we find gentlemen engaged in the business.

It is in this fact that the public which buys dogs finds its protection. A sportsman in Oregon desires to purchase a dog, and after deciding upon what he wishes, finds that a gentleman east of the Rocky mountains, possibly in the far East, advertises for sale a dog of the exact variety or breeding he has decided to buy. He has never seen this dealer, has no knowledge of his character, but finding his advertisement in a reputable journal takes it for granted that he must be all right, opens a correspondence, makes a purchase, receives the dog, and ninety-nine times in a hundred is perfectly satisfied. Distance is no obstacle since gentlemen commenced to deal in dogs, and the purchase or sale of one is as legitimate a transaction as the buying or selling of a horse.

Of course it is to be expected that one will find dishonest dog dealers, as well as rascals in every other business. There are dog sharps as there are horse sharps, but they soon become known and their occupation ceases. The opportunities afforded by bench shows and field trials for sportsmen from different sections who deal in dogs to become acquainted are availed of largely, and he who would perpetrate a swindle can be readily detected and exposed. It is worthy of note that but few such cases have occurred, although the transactions between parties unacquainted with each other have been numerous, and have involved thousands of dollars. It needs but the exercise of the same amount of judgment and common sense used in any other business event, to avoid loss by swindling in this. Deal only with well-known, reputable dealers, and one is no more likely to be swindled in buying dogs than in purchasing dry goods, groceries or hardware.

A PLACE FOR COURSING.—Referring to the capital sport of coursing, Mr. H. W. Huntington, of Brooklyn, New York, owner of the famous greyhounds Doubleshot, Dorothee and Clio, makes the following suggestions, which we heartily endorse: "If some plan could be adopted to induce a number of our prominent sportsmen to take up coursing as a pastime, I believe as great an interest would be awakened in it as is now felt in field trials—probably more, for the scoring of points is not only much easier understood by the general public, but the heats are quicker and more spirited. The few who own greyhounds in the East are content, as it seems, to keep their dogs like French poodles, and let them rest idle instead of giving the necessary exercise to show their mettle." This is too true of sportsmen in the East, and we would suggest to Mr. Huntington the advisability of arranging a public coursing match as a sure method of arousing the latent enthusiasm of the thousands in Gotham and the City of Churches who need but witness an event of this kind to become convinced of the rare enjoyment which it affords.

A VALUABLE SETTER POISONED.—Mr. Emory P. Robinson, of Sydney, Ohio, in a letter bearing date of November 27, announces the death of his pure white setter bitch Queen Blanche, a fine worker on game, especially ruffed grouse. Queen Blanche was a remarkably handsome dog, gentle, intelligent and thoroughly broken, and the fact that her death was caused by a malicious wretch, using poison, renders the loss doubly great. We hope that an example may be made of this poisoning fiend, in order to deter other human brutes of murderous instincts from perpetrating outrages of this kind, which are lamentably frequent.—*Turf, Field and Farm.*

Charles Lincoln has been chosen Superintendent of the Bench Show which will be held next March. The Princess Louise is grand patroness of the show.

Coursing Etiquette.

The Sacramento Valley Coursing Club had a match a few days since, which was won by Lane's Blue Jacket, Welsh's Nelly second, Sally third. The principal feature of the match was the abuse showered on the judge for his rulings. It is a most painful fact to record that this practice of abusing judges at coursing matches is becoming so common as to be monotonous. It must be stopped or coursing will cease to be a popular California sport, and the thousands of dollars invested in fine dogs will be so much wasted coin. Whether a judge is right or wrong, whether his decision was based on fraud or favor or honestly given, it makes no difference. The duty alike of contestants and spectators is to hold their peace and make a formal protest in a proper manner, if they so desire.

"What, see ourselves robbed and not kick?" will be the exclamation of a dozen coursing men when they read this.

We most emphatically repeat that unless a man can see himself defrauded by a palpably unjust decision without making a fuss on the field and abusing the judge he lacks the essential quality of a gentleman's character, and the sooner he gives up coursing the better for the sport. We have seen decisions given that were palpably unjust, and the men who made them knew it as well as any one, but they happened to be in favor of the loud-voiced kickers, and the disgusted sufferers, being gentlemen, quietly withdrew from the field. We have seen an honest decision excite the wrath of some fellow who did not know the first thing about coursing, and have heard him roundly abuse the judge and denounce the sport as a steal, but we have always noticed that the vulgar kickers were men ignorant of the sport or totally deficient themselves in personal honesty. In nine cases out of ten it happens that the only man who sees the race from end to end is the judge, but the fact that they only saw half of the race never seems to deter the kickers from loudly swearing that the decision was wrong. There is another noticeable thing about the kickers. They are all men whose circumstances do not warrant their indulgence in an expensive sport like coursing and who bet on the matches more than they can afford to lose. We have seen such men bet three months' earnings on a dog and when they lost, and lost fairly, howl and scream that the judge was a thief and their opponent a scoundrel. There is a way to remedy this and at the same time put the sport on its proper basis. Let those gentlemen who can lose without kicking and who follow the sport for its own sake, get together and organize a club. Let them take more than ordinary care in the selection of a judge. It is not enough that a man be a good fellow, he must be a good rider and above all a good judge of coursing. Let the club promptly expel any man who openly impugns the judge's decision and take care to accept no nomination in open races that does not come from a man they know will respect himself and the club and abide by the judge's decision.

Hare and Hounds.

This is how the *Turf, Field and Farm* writes up the meets of the Germantown Hare and Hounds Club.

It was a beautiful day for a hunt when the Germantown Hare and Hound Club met on Saturday, the 25th inst., at Walthamsowe for its sixth "meet" this year. It was cool enough to make the trail hot, and but for the few redcoats it was the best hunt of the season. Vixen and Drama had been led from the stables to the "meet," and at 3:40, when their blankets were taken off, they not only shone like new-coined gold pieces, but looked as if they could run for a man's life. At 3:40 the hares, E. and S. M. Wain, the former on Vixen, the latter on Drama, started, and the first jump was a fence, then came a four-foot cedar hedge, then another fence, down a field, across a wafer jump, over a stiff fence and then back to the first jump again (the hedge) and away, all the jumps to be seen by those present. Three minutes later the hounds (?), three in number, started, and they were Mr. Smith on Rosinante, Dr. Bray on Wait-a-While and Mr. Wilson on Hamlet. After taking the above jump, they too, were away. The trail led over the fine farms of Messrs. Cook, Jones, Fisher and Emory, and, as heretofore, the hounds always stopped riding on account of the four-foot stiff timber, but as all the jumps were low and a good "take-off" was to be had it is a pity the hounds could not make a better show than they did, as it was understood the jumps were to be low and on that account there were many carriages, including Victorias, barouches, dog-carts and one tandem team. After a run of seven miles the hares made their reappearance and after taking two more fences galloped up the stretch, and as these two were blanketed to the eyes it was seen that neither was distressed. After ten minutes' waiting the hounds came in sight, and from the looks of things it recalled the picture of the monkey and parrot that had been left alone, or, in other words, "had one h— of a time." Rosinante was over the jump first, coming into the meet field, then Wait-a-While, while Hamlet carried it away; at this time Mr. S. led ten lengths, with Wait-a-While second, but coming over the last leap Mr. S. was last. So when they turned into the finish Dr. Bray led (both feet out of the stirrups), Smith second, but about four lengths from the flags Mr. S. sat down on his horse, and coming on, won by an open length from Wait-a-While, while Hamlet was last, that horse's rider also having broken his irons. As this was Drama's last hunt, and to settle a bet that he could not jump a stiff four-barred fence, Mr. Wain told his man to ride him over it, and right well did Daniel Green do it, for starting in a bad "take-off" Drama took it and cleared the space of 22 feet 8 inches, carrying 160 pounds. Too much can't be said for the riding of Green, and he was well applauded. We are sorry to learn that this is the last hunt to be had at the above-named place, but when so few turn out we are not surprised, for it does not pay one forgoing to the farmers and getting their leave to trespass. The next meet is at Glen Echo, on Thanksgiving Day, but as the ground is white at this writing it may be off. There is some talk of getting over some English hounds and starting a kennel, but as there are so few gentlemen in our city to enjoy the sport, it is not known if it will be done.

SALE OF THE POINTER BITCH SPINAWAY.—Mr. John W. Munson, of St. Louis, has recently purchased of Mr. E. C. Sterling, the valuable pointer bitch, Spinaway, by Garnet, out of Keswicks, the latter being imported by the St. Louis Kennel Club at a cost of \$500 in England. Spinaway is a very handsome and stylish bitch, thoroughly broken by Mr. B. Walters, and it is Mr. Munson's intention to breed her to Coxeth. She is the only Garnet bitch in America, and Mr. Pilkington refused an offer of \$2,500 for her sire.

FISH.

Disgusted Long Island Trout.

Trouting on Long Island has had its praises chanted for many years and although we long wanted to try our luck it was not until last spring that our wishes were gratified. Fishing then (in the latter part of May) was poor in Pike county, Pa., so our party made a sudden move, on the afternoon of the 29th of May, and we soon arrived at Freeport, L. I.

After leaving our luggage at the hotel we took a stroll to get our bearings, and after supper were entertained with legends of the glories of neighboring streams. Legends they certainly must be, and extremely ancient at that, if ours was the usual luck of Long Island anglers. At daybreak the next morning we were afoot and on our way towards a neighboring "free" stream, so called to distinguish it from the many preserves in the vicinity.

Our party (four in number) covered the stream thoroughly, each man taking a certain section for his ground. As we straggled in to breakfast the score was taken, and showed the vast catch of five fingerling trout, all taken on mummychug bait, and from a stream that we, brought up on the banks of Maine's rocky, brawling brooks, deemed worthy only of catfish, suckers, and such trash. It was almost stagnant, with a muddy bottom, and absolutely impenetrable to one using a fly-rod. At table, however, our spirits were soothed and our hopes raised by promises of what was to come when we reached a free pond some five miles distant.

We bundled our traps in the wagon and started. The drive was certainly a beautiful one, and that may have elevated our feelings somewhat unduly; however, "pride goeth before a fall," and what difference is it if the fall be a few feet more or less? On reaching the pond we found a detachment of the all-pervading small boy busily engaged in taking some very minute "sunnies" in out of the wet. Adjusting what we considered a killing cast of flies, we flung them boldly forth upon the waters, with all the delicacy and skill that laid in us. Not a rise. Perhaps, we thought, the flies do not suit the monarch (so called) of Long Island. Thereupon we changed our cast and tried again. Not a rise. And we kept changing until the resources of our fly-book were exhausted. The result was the same, so we fell back upon the long-suffering mummychug, and adopted the ways of the country (in Rome, you know, and all that) and fished.

Now, to some it may be the ultima thule of trout angling to throw over a hook and wait fifteen or twenty minutes for a bite, but for our part we prefer ours straight without any such mixture. By this time it was nearly noon, so we adjourned for lunch, and this was the greatest success of the day, for there we did get a splendid lot of bites at least. One of our number, known to you as Q—, then essayed fishing from a boat, and glorious luck was his. For he caught three—remember the score, please—three pickerel, the combined weight of which might have been half a pound. Ye gods! what ecstasy was his! how great was his pride! We could only faintly imagine his beatified state when we heard him softly murmuring "he wondered how a man could get trout when such d, d, sharks were in the pond."

As the trout taken numbered about ten we separated, half the party trying another brook, and the rest going to a preserve where trout may be taken at the moderate cost of \$1 per pound. Preserve fishing is not our weakness, and we stayed here just long enough to catch a dozen fish. On our return to Freeport we found the grand total to be thirty-nine trout, one of which (taken in the brook) weighed one and a quarter pounds. What a splendid showing for a full day's work for four full-grown men! We have never dared to figure the cost of each and every one of those trout. But when we go again we think it will be more profitable to buy outright a few counties on the island. We have had our fling. We are satisfied. We are now prepared to drink in the most thrilling experiences of trouting on Long Island, and without laying awake at night thinking of its charms, and without the slightest loss of appetite when we cannot participate in the mad sport.—*Carlton in the American Angler.*

LURE FOR CATFISH.—"I saw in your paper some time ago an item in regard to catfish biting at a spoon-hook. I was fishing for bass a number of years ago, and had a catfish jump out of the water at my trolling spoon. The fish weighed not less than fifteen pounds. As you expressed a desire for information in this respect through your ever valuable journal, I give my individual experience." The above, from a correspondent of the *Turf, Field and Farm*, is only equaled by the taking of a catfish by Mr. Joseph Wilcox with a fly, which, however, was done by trailing the cast about six feet under water. A "caty" springing out of water to take a lure, places the species in the order of game fishes.—*Angler.*

VITALITY OF THE TROUT.—The following from the *American Angler* shows strongly the marvelous vitality of the trout. The incident happened at Glenn's Falls, N. Y.: Recently there was a break in one of the street mains of the village water works. Upon digging down to the break, the workmen found a brook trout of eight ounces, that had come through the ragged hole in the pipe. The trout was apparently as well as when he left the reservoir, 152 feet above the broken pipe. The pressure on the pipe where his troutship made his exit it 108 lbs. to the inch. The reservoir was one of the finest trout streams in the State.

An Eastern farmer, who has a half acre pond filled with fine fish in a permanent pasture, remarked that it paid in three ways: The water, being always accessible, was worth more to his cows than if the half acre was in grass; the fish were worth as much as the product of any half acre on his farm; and, finally, the pond yielded an ice crop every winter. The pond was stocked with gold fish and bullhead.

Brook trout take perfectly naturally to salt water. Some of the largest and finest trout ever shown in New York have been Long Island trout, the best of which run up from the ocean. Even in Connecticut those streams which empty into Long Island Sound furnish the largest trout that are caught in the State.—*Boston Cultivator.*

Two more specimens of the angel fish were taken last week by Italian fishermen off the Farallones. Both are large specimens, some three feet in length. They seem to belong to the family of skates.

Salmon trout are reported to be running the Olema creek. Salmon creek, however, has been closed by a sand bar. The water is too low to force its way through, and the fish cannot enter.

A good many boats were out after flounders at Brooklyn last Sunday, but luck was not very good, although the day was a fine one.

Off the training walls of Oakland Creek there are places that ought to furnish good fishing.

A FISHY FISH STORY.—It is related of a Chinese fisherman that not long ago he was angling in Napa river and jerked up some small fish on his line. In extracting it from the hook, with mouth wide open, at the moment it was released it flopped head first into his open mouth. The Chinaman made a desperate thrust to get it out and shoved the fish further down his throat. He closed his jaws and smothered it to death, but afterwards, when attempting to get it from his mouth, the spines in the fins and along the back would be erected and present an impediment he could not overcome. In his desperation he sought the advice of his fellow-Mongolians, who concluded as the fish would not come out it must go in, and they forced it down his throat.—*Napa Reporter*, Dec. 13.

It is not known by what route the salmon come in to the shore to the Columbia river though it is conjectured that they come chiefly from the north. After entering the river the spring runs gradually make their way up towards the upper tributaries. The summer runs proceed more rapidly, a large proportion of both reaching the very headwaters of the river. The fall run of salmon do not ascend so high, but frequently spawn on the sand-beds of the main river within fifty miles of the sea. The salmon do not follow a stated track every year in ascending the river, but one year they will take one course and another year a different one. Neither do they adhere to the same course during any specified year, but sometimes ascend the current and sometimes keep near the banks. A very strong current, however, they seem in the lower river to uniformly avoid.

The salmon make their first appearance off the Columbia in February, though in very small numbers. The main body arrives in May, June, and especially in July, when the run is enormous. The May salmon are largest. Perhaps the most correct view to take of the running of the salmon, is to consider all the salmon as included in one run, beginning in February, increasing in May and June and culminating in July, though they might also be legitimately divided into three runs: The first or meager run coming in February, March and April; the second or full run in June; and the third or maximum run in July. After July they diminish very rapidly and soon almost entirely disappear from the river.

Water which has been used by factories is generally warm, and contains refuse of different kinds, such as lime, coloring matter, alkaline salts, remnants of plants, slime, etc. It will be evident that large quantities of such refuse will pollute rivers and brooks to such a degree as to render pisciculture impossible, and to make the water unfit to be used by either man or beast. An investigation of our smaller rivers and brooks would furnish proof of the growth and magnitude of this evil, and show the necessity of relief.

The George Crooks creek flows into the McCloud river about four miles above the Government fish hatchery, and it is there experiments are being made in propagating the California brook trout.

Late Gunning Items.

A new shooting club called the Metropolitan Gun Club has been formed in this city. The members are negotiating for grounds at Alviso where there is said to be good shooting most of the season. The officers are as follows: President, Thomas Watson; Vice President, Thomas Ryan; Secretary, Walter E. Roche; Treasurer, P. Bodien; Directors, Aug. Ott, Wm. Olover and Henry Grace. Those officers, who were elected on the 8th, will serve one year.

A friend of ours killed some white geese the other day up at Bouldin Island and left them on the marsh while he went on further in pursuit of game. When he came back two hours afterwards he found four vultures and a number of crows had taken possession of them and had two entirely eaten up. Two vultures were going in on the third. It seems unusual for vultures to go for fresh meat, in this way.

The ducks have been out in the big bays of late. They seem to understand enough of the hunters' habits to get out of the way of the ponds except after dark. When the day breaks they have flown away to the big bays where no one could get at them. The old ponds therefore are rather too vacant to please the hunters.

Lots of amateurs have been popping away at the unfortunate birds which have been foolish enough to come into Oakland creek to feed. There are very few good hunters among them and shots are fired so carelessly that the wonder is that no one has been shot.

So far this season has been a bad one from a duck hunter's point of view. The birds have not been plentiful, and they have learned to stay away further out of range than they used to. At least that is what some of the unsuccessful hunters say.

The ducks get out in the middle of the San Joaquin river these windless days and there float along down in large numbers, but no one can get near them. They fly very little.

A good many hunters spend their Sundays on the bay marshes between Alameda and Alviso. They are scattered all along where the railroad stations are convenient.

The old Iron House slough, on the San Joaquin, where there used to be free shooting, is now no longer visited. The land has been leased and the ponds have dried up.

Fred Butler shot thirty-five ducks at Teal station last Sunday, and twenty-three of them were "caus." The shooting up there has not been good of late.

The shore all along the main bay and the San Pablo bay seems to be filled with ducks. They seem to be scattered all along and sometimes in big flocks.

Some young men camped out on the San Leandro marsh last Saturday night so as to be near the ducks early Sunday morning.

Even at the preserved grounds this year there has been no very exciting sport such as there used to be.

Several new boats have been sent up to Union Island lately for the gentlemen who shoot up there.

We have heard no good reports from the Wayberry slough neighborhood this season.

The shooting on Sherman Island has not been up to the mark this season.

Prince's race with Morgan is now arranged to take place at the Institute Fair Building, December 9. The race will be for twenty miles, and Prince will allow his opponent two minutes' start. The stakes are announced as \$250 a side.

BASE BALL.

Next Year's Team—Sketches of the Players.

From the following, which we copy from the New York *Herald*, some idea can be obtained of the rapid strides the "National game," has made in the last twenty years.

Forty years ago to have predicted that a "pitcher" or "catcher" could obtain a salary of \$3,000 for the months embracing the season would have laid the prophet liable to a charge of lunacy. Had such a vaticination been made on the village green during the pending of one of the old-time matches, the seer would have raised a torrent of ridicule which the bravest would have shrunk from.

There was lively work in these old-fashioned games. On court or "general training" days, especially the latter, the Square would be crowded. The country champions would try conclusions with those of the town, and among the hills of Northern Pennsylvania there was no lack of strength and agility among the hardy youngsters. Lacking in the scientific phases of the present game, there was more life, more animation. The catcher would grip the ball before the striker could make the blow, the "throwers" hurl it so swift that it fairly whizzed through the air. Woolen yarn wound tightly round a cork, covered with woodchuck skin without being as large or as dense as the regulation, there was weight enough to permit its being thrown with precision, and then there had to be a "catch" or a "hit," and when the latter came fairly on the but of the ear there would be some ground if not lofty tumbling.

The old-time sports are things of the past, and though us old fellows with gray hair, and somewhat stiffened joints, may cherish the remembrance, the youngsters will vote that such crude ball-play was poor fun:

New York city will next season for the first time in the history of base ball place a representative professional team in the field to compete for the championship of the League. The Metropolitan club was organized on the 15th of September, 1880. They were exceedingly successful during the remainder of the season, playing almost daily up to the close of October. Their wonderful success, especially financially, led to their going into base ball more extensively the following season, when they surpassed all previous records in games played, they playing 151 games during the season, winning 80 and losing 69. The season of 1881 was also highly remunerative; in fact, it was so much so that the management of the club leased the ground at a rental of \$10,000 per annum, in addition to which they erected a grand stand and free open seats, which cost \$10,000. This gave the ground a seating capacity of about seven thousand. That portion of the ground immediately in front of the new grand stand was filled in and graded and the diamond changed. Their nine for 1882 cost them about \$12,000, and yet, in spite of all this enormous expense, over \$70,000 were taken in during the past season, the grand stand alone having brought in \$15,000, which far more than paid for itself. After such a brilliant financial season as this Mr. John B. Day, the president of the Metropolitan Exhibition Company, has determined to give the New York public as fine a team as could possibly be gotten together for the campaign of 1883. There are better men in the field than some of the players engaged by the Metropolitans, but those are men who could not be reached this season. Money, however, was not spared in getting the present team together, and most likely it will be the highest salaried base ball team which has ever entered the arena, some of the men receiving over \$3,000 apiece.

The following is a brief sketch of the men engaged as New York representatives in the League:

John M. Ward, who will, no doubt, have the heavy end of the pitching, is a heavy batter and one of the finest base runners in the country, in addition to his great power of manipulating the ball. He is also an excellent outfielder and a fine third baseman. Ward was born in Bellefonte, Centre county, Pa., in 1860. His height is 5 feet 8 inches and he weighs 150 pounds. He learned to play base ball while a student at the Pennsylvania State Agricultural College. On the college nine he changed between pitcher and third baseman. In 1876 and in 1877 he played with semi-professional teams at Lock Haven, Renovo and Williamsport, in his native State. His first engagement with a professional organization was in July, 1877, when he played a few games with the Athletics and Philadelphia, in the Quaker City. In August, 1877, he went to Janesville, Wis., and played with the Mutuals of that place until they disbanded in September. He finished the season with the Buffalos. During the early part of 1878 he played with the Crickets of Binghamton. When they disbanded in July he joined the Providence club, where he remained until the close of the season of 1882.

Michael Welch, who will alternate with Ward in the pitcher's box, is an old Brooklynite. He is 5 feet 9 inches high, and weighs 160 pounds. In 1877 he played with the Volunteers, of Poughkeepsie; in 1878 with the Auburn and Holyoke clubs, and with the Troy club in 1880, 1881 and 1882.

James E. O'Neil, who met with such wonderful success last season in the few games he pitched, has been retained another year. He has great speed, and was just beginning to have good command of the ball when he got a frog felon on his hand and was laid up the remainder of the season. O'Neil was born in Woodstock, Canada, and during the seasons of 1877, 1878, 1879 and 1880 played with the Actives of his native place. For several weeks in the beginning of the season of 1881 he played with the Detroit club.

William Ewing, late of the Troy club, has been engaged to alternate with Clapp behind the bat, and when he is not catching he will have to cover second base. Ewing is one of the finest general players in the country, whence the great demand for his services this fall. He will undoubtedly be of great service next season. Ewing began to play ball as a professional in 1878. During that season and 1879 he played with the Mohawk Browns, champions of the southern part of Ohio. In the early part of 1880 he played with the Buckeyes, of Cincinnati. In June of that year, however, he joined the Rochester club, where he remained until the following September, when he signed with the Troy club. He is 5 feet 10½ inches high and weighs 176 pounds. He is a native of Cincinnati.

John Clapp, who caught so ably for the Metropolitans during the past season, will alternate with Ewing. Clapp has had many years' experience in baseball playing. He commenced playing in 1866 in Ithaca, his native village, with the Forest City club of that place, as an outfielder. In 1867 he pitched for the same club. He received his first salary for playing ball in 1868 and 1869, when he played with the In-

dependent club of Mansfield, Ohio, where he alternated as catcher and pitcher. In 1870 he budded forth as a short stop, playing that position with the Amateur club, of Oswego, New York. He caught for the Clippers of Ilion, N. Y. In 1872 he caught for the Mansfields, of Middletown, Conn., which was his first professional engagement. The Athletic club, of Philadelphia, secured his services during the season of 1873, 1874, and 1875. He accompanied the Athletic-Boston clubs on their famous tour to Europe in 1874. When the League was organized, in 1876, Clapp was engaged by the St. Louis Brown Stockings, who retained him until the close of 1877, paying him the highest salary ever given a ball player prior to the coming season—i. e., \$3,000. He managed and captained the Cincinnati club in 1878, and did the same for the Buffalo association in 1879. He captained the Cincinnati club on their California trip during the winter of 1879-80, and continued with them during the season of 1880. He captained and caught for the Cleveland club in 1881 and the Metropolitans in 1882. He is 5 feet 8 inches in height and weighs 199 pounds.

John Reilly, who played first base for the Metropolitans, last season, has been engaged to fill that important post in the League team next season. Reilly was born and lived the most of his time in Cincinnati. His first experience at playing ball was with the Crickets, in 1877, a Cincinnati amateur club. He continued with amateur clubs until the fall of 1879, when the Cincinnati club engaged him as a substitute to accompany the club to San Francisco. In 1880 he was engaged to play first base for the Cincinnati League club. He is a lithographer and worked at his trade in 1881, with the exception of a few games he played during the summer for pleasure. He played first base in brilliant style last season for the Metropolitans. He is 6 feet 1½ inches high, and weighs 175 pounds.

John Troy, who at times plays most brilliantly, has been secured for second base. Troy hails from this city, is about 5 feet 5 inches in height and weighs 155 pounds. His first experience in a semi-professional club was with the Alaskas of this city in 1877. During the season of 1878 and 1879 he covered second base very acceptably for the Jersey City clubs. The Dubuque Club of Dubuque, Iowa, secured his services in 1880. In the early part of the season of 1881 he played with the Atlantics of Brooklyn. He secured his release and joined the Albany Club, and after they disbanded he joined the Detroit, with whom he closed the season. During the past season he played with the Detroit, Providence and Metropolitans.

Frank Hankinson has been re-engaged to cover third base, in which position he has few equals and no superiors. Hankinson was born in this city, where he has lived nearly all his life. He is 5 feet 11 inches high and weighs 160 pounds. His base ball career dates from the days of the Alaska Jr.'s, when they played in Central Park. The Alaskas came out as an amateur team in 1875. He continued with them until 1878, when he joined the Chicagos and remained with them until the close of 1879. He played with the Cleverlands in 1880 and joined the Troys in 1881.

Edward J. Caskey has been secured as short stop, and a better short stop can scarcely be found. He was born in Danvers, Mass., where he spent the greater portion of his life. He is 5 feet 9½ inches in height and weighs 160 pounds. His first appearance on the ball field was with the General Scott Jr. club, of Danvers, Mass. He continued with them until the close of 1875, when he joined the Live Oaks, of Lynn, Mass., and caught for them until they disbanded, in August, 1876, when he joined the Auburn club for the remainder of the season. He went to Rochester in 1877 and in fifty-four games that he played as catcher accepted ninety per cent. of chances offered. He played forty-six games with them as third baseman and ranked second in that position in the International Association. In 1878 he played short stop for the Rochester club until they disbanded in August, when he joined the Troys and finished the season as catcher. In 1879 he played as utility man for the Troys, playing in every position on the nine but pitcher. In 1880 and 1881 he played short stop for the Troys.

P. Gillespie, the left fielder of the Troy club, has been engaged to play left field for the Metropolitans. He has been playing ball since 1875, when he made his debut with the Carbondale club, where his heavy batting brought him into prominence. In 1876 he played with the Honesdale club and with the Wilkesbarre in 1877. He was rather on the go in 1879, dividing the season up between the Live Oaks of Lynn, Mass., the Worcesters and Baltimores. In 1879 he played with the Holyoke club, who were dubbed the "heavy hitters," owing to their fine heavy left-handed batsman, all being exceedingly heavy hitters. Gillespie was born in Carbondale, Pa. He is 6 feet 1½ inches in height and weighs 180 pounds.

Roger Connor, the famous first baseman of the Troy club, has been engaged to play center field and alternate with Reilly at first base. Connor was born in Waterbury, Conn. He is 6 feet 2 inches high and weighs 194 pounds. His baseball career dates back to 1875, when he made his first appearance on the ball field with the amateur Monitors of Waterbury, with whom he played until the close of 1877. He played the first part of the season of 1878 with the New Bedford and finished the season with the Holyokes. He remained with the Holyokes until the close of the season of 1879. Ferguson secured him for the Troy team in 1880, and he remained with them until the close of the present season.

Michael C. Dorgan, who has been engaged to play right field, is a remarkably clever player. He made his debut as a ball player in 1874, with the Clippers of Webster, Mass. The following season he joined the Graftons of Grafton, Mass. During the latter part of the season he played with the Live Oaks of Lynn, Mass. He played in such fine form with the Live Oaks that the Stars of Syracuse engaged him for the season of 1876. His brilliant playing attracted universal notice, and he was induced to join the St. Louis Brown Stockings in 1877. When the St. Louis club withdrew from the League in the fall of 1878 Dorgan joined the Stars of Syracuse, and played with them during the seasons of 1878 and 1879. He played with the Providence club in 1880. In the early part of 1881 he played with the Worcesters, and closed the season with the Detroit. He did not play during the season of 1882. Dorgan was born in Middletown, Conn., is 5 feet 9½ inches high and weighs 184 pounds.

The game between the St. Mary's College Club and the Redingtons Sunday, at the grounds of the College Club, resulted in a victory for the students, by a score of 11 to 4. The Redingtons were short two of their best men—Evatt and Lewis—and to this they attribute their defeat.

The game between the Howards and the Olympics on the 10th resulted in a victory for the Howards by a score of 15 to 14.

The Sweeney Benefit.

The game between the reorganized Nationals and a picked

nine, for the benefit of Sweeney, the Niantic pitcher, last Sunday at the Recreation Grounds resulted in the following score:

ATHLETICS.

Crossley Defeats McQuigan.

The sprint-race between John T. Crossley of Philadelphia and Frank McQuigan of Boston, for a stake \$800, which has for a week past excited the attention of those interested in such affairs, took place Tuesday, the 5th inst., on the Polo grounds, New York. This race was the first professional sprint-race that had taken place in this city since the All-United-States Handicap, given on the same grounds in August, 1881, and this, together with the reputations of the two men, induced a number of sporting men to attend. The conditions of the race were that the men were to race 130 yards, the start to be by mutual consent from a fifteen-foot scratch, and in case of no start being effected in an hour they should be sent off by a pistol start. It was 3:55 o'clock when the men were called to their marks, McQuigan having the inside position. The betting was five to four on Crossley, and a large amount of money changed hands at these figures. When the men got on their marks, they immediately made efforts to make a start. After five or six breakaways, Crossley told the referee that he caught McQuigan over his mark, and claimed the stakes. This claim was not allowed, and after four more breakaways the men went over the line to an even start, running side by side for fifty yards. At the one hundred yard post Crossley had a lead of a yard and crossed the line an easy winner by five feet in 13½ seconds. This is now the best professional record for the distance in the country, and is at the very fast rate of 10:09 seconds for one hundred yards. As the additional thirty yards brings a much heavier strain, the performance has greater merit than one hundred yards in ten seconds.

THE AMERICAN RECORD LOWERED.—At the Manhattan Athletic club games at New York on the 12th George, the English champion amateur runner, was defeated in a ten-mile race by Thomas Delaney. Delaney had a start of three minutes, and won by three minutes and fifty-eight seconds. Delaney's time to-night beats the best previous American record, which was 57 minutes 20 1-5 seconds. George's best time is 52 minutes 56 2-5 seconds. George is regarded as out of form. Myers, the American champion, won the half-mile run in 2:01 4-5.

A dispatch of the 13th from Nevada City says: C. A. Harriman, the champion long-distance walker of the world, now en route to Australia to race with William Edwards, is here, and will enter a match Friday evening in this city with A. S. Chase, a local runner, for a twenty-seven-hour contest. The stakes are \$100 a side, the gate money to go to the winner. The conditions are that Harriman walks square heel-and-toe, while Chase goes as he pleases. The latter has no record beyond recently making fifty-five miles in eleven hours.

Puyallup Valley, in Washington Territory, located about ten miles east of Tacoma, is the great hop producing section of the Pacific Coast, and, I believe, of the United States. This year there is a hop famine in Europe, and as a consequence the price has advanced four to five hundred per cent. The hop growers of Puyallup are in high clover, so to speak—some of them clearing fifty thousand dollars on their crop. Before the picking season opened, they sent a messenger up the coast to notify the Indians of an advance in the price of picking hops, for all the hop picking is done by Indians. This welcome news had the effect of bringing Siwash from the northern part of British Columbia, and when we were passing from Tacoma to Seattle, the Sound was completely dotted with their canoes, all heading for Tacoma. Each canoe contained from two (buck and squaw) to a dozen—children of all ages, occasionally a dog or two—in fact, the whole outfit, household goods, gods and possessions of the family. Many of the canoes were thus loaded down almost to the water's edge. They live in these canoes by day, stopping at night on the shore at any convenient spot, cook a salmon, then repose beneath a blanket, a tree, rock or anything handy. The squaws and the children do most of the hop picking, the head of the family considering it beneath the dignity of his lordship to labor, feeling better satisfied to indulge in the more congenial pastime of loafing around and gambling. I should judge we saw not less than thirty of these canoes, and they certainly presented a very picturesque appearance as all hands paddled along the mirrored waters of the sound, reminding one very forcibly of the gondolas of Venice.—*Bulletin correspondent.*

The weights of produce established by the laws of Kentucky are as follows: Wheat, sixty pounds to the bushel; shelled corn, fifty-six pounds; corn on ear, seventy; corn meal, fifty; rye, fifty-six; oats, thirty-three; barley, forty-eight; Irish potatoes, sixty; sweet potatoes, fifty; beans, sixty; castor beans, forty-six; bran, twenty; shorts, thirty; middlings, forty; hominy, sixty; clover seed, sixty; timothy seed, forty-five; red top seed, fourteen; Hungarian seed, forty-five; hemp seed, forty-four; flax seed, fifty-six; millet seed, fifty; osage orange seed, thirty-six; sorghum seed, forty-two; Kentucky blue grass, fourteen; buckwheat, fifty-two; onions, fifty-seven; top onion sets, twenty-eight; peas, forty-six; split peas, sixty; dried apples, twenty-four; dried peaches, thirty-three; malt, thirty-four; salt, fifty; coal, eighty; turnips, fifty-seven; hay or straw per ton, 2,000; hemp per ton, 2,040; tow per ton, 2,210.

"What is a yacht?" was inquired of a long, gaunt codder, who was lounging about the wharf. "What's a yot?" said the fisherman. "Well, you gets any sort of a craft you please, and fill her up with liquor and seegars, and get your friends on board, and have a high old time, and that's a yot."

JINGLING BELLS.

How Gothamites Enjoyed Thanksgiving Day—Sleighting on the Uptown Drives.

Such are the "head lines" in the New York *Herald* of an article which will be found below. It was Thanksgiving Day which showed such a brilliant spectacle on the drives of the metropolis, and it was assuredly a handy knight of the pencil who portrayed the scene. It is also long odds that he is of an age when the blood tumbles through the body in warm gushes and will stand as much subtracted caloric as quicksilver before congelation. It is all very well to extol sleigh-riding in a country where it is either "hubby" roads, or mud and slush. Contrast it, however, with Thanksgiving Day here, and the most enthusiastic admirer of the snow-path will have to concede the superiority. Never were roads smoother than those in the neighborhood of San Francisco that are ever in this desirable condition. The park drives never were more admirable, and in place of the chilly fall of millions of snowflakes there were verdure and bloom. The air could not be more balmy, and the ocean and bay were tranquil as a mountain-framed tarn. Over in Oakland there was racing, and the hores "ecraped" as nicely as though it were mid-summer. The silk jackets of the jockeys were protection enough against chilliness, and the grooms were in their shirt-sleeves when handling the "knife of sweat" as the Duke of Newcastle denominated the scraper, or plied the rubbing cloth. The music of the bands from the picnic ground, where the Democrats were jubilating, came soft and harmoniously, and the cheers reverberated in echoes from the buildings. The field inside of the racecourse was fetlock deep in the nutritious "volunteer," and the horses in it looked placidly at their struggling relatives on the track. There were freshly cut bouquets in the hands of the occupants of the ladies' stand, and many gay youngsters had the lapels of their coats decorated with buds and blossoms.

It is all very well to talk, write and sing of the "merry sleigh bells," though when icicles are hanging from eyelashes, and the beard is frozen into a clod of arctic mossing, fingers and toes tingling in acute pain, the tintinnabulation does not make amends for the discomfort. The light wagon, the balmy air, and the smooth dirt road are more in accordance with our present desires, though the well-written account will interest our readers:

Thanksgiving Day, bright and rare and racy! A sky overhead clear as the palm of your hand, with a dome of gray and blue linings. Miles and miles of sleigh-worthy roads, with the snow lying fast and compact and never a prospect of slough or puddle. What more was wanted to tempt from their homes the thousand pleasure seekers of Gotham? Whoever had the means to do it did not lose the chance of taking a spin upon the Boulevard yesterday. The homes of Harlem seemed turned inside out and emptied upon the noble drives that sweep through it, and day and night the gay throng, horse and foot, went bustling along in a genuine holiday mood. Long before pious church people were done with service whips were cracking, bells were jingling and hoofs were ringing merrily on the road. Along Fifth avenue and entering Central Park from a score of approaches came the noisy cavalcade. The streets heard the clamorous jangle. It mingled with the monotonous dinging of car horses and the rumble of the "L" road. It sent cheery sounds tingling to the ears of staid people in genteel parlors and poor people shut up in their tenements, and to all it brought a reminder of gaff and boisterous but bluff and honest Jack Frost's presence.

Soon the avenues of the park were filled with glancing harness, tossing manes and gleaming runners. The trees, freighted with their white covering, took all sorts of fantastic shapes. The houses and spires which leaped into sight on the high ground and peeped in through the vista of trees seemed in the rush of the ongoing crowd to be fast whirling behind. And soon the road sweeps by old Mount St. Vincent and empties the clattering, laughing, emulous stream out upon the broad Boulevard. Here is an open road and plenty of elbow room. How the racing spirit, dormant perhaps in many veins, awakens under the stimulus of the keen air and this intoxicating chorus of clattering hoofs, cracking whips and cheering halloos! Away they all go over the glittering way, reins taut, eyes sharp, hands ready. Stately animals, with bulky equipages behind them, lose their even pace and scamper on with the scrawny, well-worked beast fresh from the cart harness pounding the road alongside and showing every bit of game there is in his poor, shrunken carcass. Here comes the trained roadster, known to onlookers at walk and trot and followed by eye and comment. How he spurns the snow and shoots by less trained and light-footed steeds as though rejoicing in a sense of his superiority. Big sleighs and little sleighs, sleighs that glitter with varnish and crammed with costly furs, sleighs that have a bare coat of paint and wear a dreadfully strained and woe-begone aspect, sleighs that skim and sleighs that drag, all are out and doing their prettiest to contribute to the jollity of the day. On either side of the road lie bare fields. Distant hills, flecked with white, run along on one side. On the other the housetops and steeples of Harlem shift like the spars of a ship showing in a fog. From the zenith an ashy sky, without a cloud, sweeps around till it meets a border of delicate pink; and below all, down on the horizon, a rim of the purest azure bounds the prospect. The Boulevard is a paradise for loungers. It bristles with hostilities. The fumes of hot punches mingle with the frosty breezes from the Hudson and the Harlem and doubtless serve to temper them. Every road house has its *clientele*, and the learned manner in which those ancient falsifiers of equine records and equine exploits discourse in front of their respective lairs would shock Ananias and Sapphira and make Munchausen regret he had given up spinning yarns before meeting them.

Now it is well in the afternoon, and every soul who has reins to handle seems to be plying them. The Boulevard has been turned into a torrent of horses, sleighs and harness. The spirit of emulation has seized horse and man and both struggle to leave their neighbors behind. Away all go, with a "Hi! Ho!" "Git along!" a snapping of lashes and a jingle of harness. The bells palpitate in the cold, crisp air in a sort of measured harmony. The hoof-beats thump a drum-like accompaniment. There were clever whips astir and spanking steeds before them. Here in a flutter of snow went Dan Mace in and out, in and out through the throng, now selecting an opponent for a test, now whipping back for

another. John Murphy amused himself in like fashion and a whole pack of turfites went hunting one another up and down the drive. Then the nabobs of track and avenue were abroad with some of their choicest stock. Messrs. Work and Lorillard, Stokes and Eastman, Harbeck and Sales, Kidder and Freeman were handling the ribbons behind some fast-going nags, and, in fact, every one who had an animal with go or ehov in him, sent him to the front at some time during the day.

From Fifty-ninth street all the way to Jerome Park there was all the afternoon an animated stream. Some went all the way up to Fordham, most turned at Fleetwood Park, and old horsemen who wanted to show the mettle of their animals before assemblies of onlookers confined themselves to the road this side of Macomb's Dam. Throughout the whole length of the avenue the sidewalks were lined and the hostilities did a brisk business.

When night fell and the color died out of the sky the tinkling of bells and the voices and the clamor died away. For awhile the road was still and it seemed as though the pale fields and the dreary clusters of trees were to be left to the winter solitude with which they seemed in harmony. But it was only for a while. Gay as a sleigh ride may be in the bright sunlight and in the whirl of horses and vehicles it is jollier still when the lamps are lit in street and homestead and horse and driver speed out upon the road in that mad, frolicsome humor which only the night begets. There were scores out last night for a dash through the star-lit landscape. There was an air of bleakness about the whole scene which, in some paradoxical way, seemed to give a merrier jingle to the bells and a more musical ring to the laugh. The whoop and burl of laughter kept the road awake all through the night, and for hours beyond their usual time of closing the hostilities buzzed and lights shone hospitably from doors and windows.

Over a thousand men labored yesterday in order that the rest of the community might have a supplementary thanksgiving to-day for the blessing of clean streets. Long hours before the holiday public dreamt of leaving their comfortable couches—nay, hours before some had retired to them—the forces of the Street Cleaning Department and its contractors were struggling with the masses of snow that covered the great thoroughfares, buffeted the while by the last gusts of the expiring storm. As the *Herald* recorded yesterday, the close of the downfall left the streets buried in a depth of five inches—just deep enough to be a genuine embarrassment to wheeled traffic, and altogether too deep to leave any room for comfort to pedestrians. When the business population turn out to their regular avocations this morning they will find the entire line of Broadway from the Battery to Twenty-third street cleared of its wintry mantle; many of the downtown business streets will be opened, and large forces of men will be at work in all quarters of the city removing the encumbrance from all the leading avenues of travel.

Commissioner Coleman had all his preparations complete to begin work the moment the snow storm ceased, and at midnight Wednesday night his gangs were already proceeding to the scene of operations. He decided to concentrate his entire force on Broadway yesterday, as the best means of serving the business interests of the city. The regular Broadway force was therefore strengthened by a large body of Italians; extra carts were hired, and the preliminary process of scraping, sweeping and piling the snow was begun at several points. All night the men worked, and at daybreak their numbers were reinforced by the gangs from all the ten districts into which that portion of the city under direct control of the Commissioner is divided, with their foremen and their carts. The work was thoroughly well done. This great undertaking of clearing the line of Broadway in a day was literally carried out, the work being completed about midnight. Between seven hundred and eight hundred men were required, exclusive of those employed at the wharves, and about three hundred and fifty carts were used.

Mr. John S. Brown and Mr. T. W. Walton, the contractors for the downtown districts, also showed energy in dealing with the situation. Each put large forces of men on the streets in addition to their regular laborers, and numbers of extra carts were hired. Work was begun by both at midnight and was continued throughout the entire day, both gentlemen visiting their districts personally to see that satisfactory progress was made.

Use Only Thoroughbred Bulls.

We cannot too often nor too frequently recommend farmers and cattle men to use none other than thoroughbred bulls upon their herds. No matter what the breed may be that is chosen, the male should always be a purely-bred animal of the race. There is a mysterious influence, not at all understood, and which the ablest scientists have scarcely attempted to explain, that follows the use of the thoroughbred male upon a stock of mixed blood. It shows itself in increased size, greater vigor and better feeding and milking qualities, and it is worthy of especial notice that, in general, the more purely bred the male may be, the more marked appears to be the effect of the cross.

With cattle raised especially for beef, it shows itself not only in greater weight attained from a given quantity of food, but in an improved quality as well, so that the farmer may, by the use of such a bull, not only raise more pounds of beef from the same amount of food, but at the same time produce animals that will bring a better price for the same weight than when breeding from common stock.

Grade bulls rarely possess this magical element of prepotency. The time has gone by when a single farmer can compete successfully in the markets for beef cattle, unless he uses a thoroughbred. He must use thoroughbred males only or quit the business. But we want to impress upon the minds of our readers the importance of knowing that the animal to be used is a thoroughbred. Be assured that nothing short of this will fill the requirement. Grades may look as well—even better—but when they come to be used for purposes of procreation they will fail to effect material improvement.

In view of the fact that the chief value of a bull for breeding purposes depends upon his being wholly what he is represented to be—a thoroughbred—farmers cannot be too careful in making their purchases. For the pedigree, which is all important, the purchaser must rely mainly upon the integrity of the breeder. Hence the great importance of buying only from reputable and reliable breeders; and the dangers of dealing with mere traders and men that are not breeders, who have no reputation at stake and who neither know nor care how the animals they offer for sale are bred.—*National Live Stock Journal.*

A novel feature of the State Fair at Austin, Texas, was a roping contest between thirteen herdsmen for a prize saddle valued at \$300. T. J. Morris of Caldwell county was the victor, having roped, thrown down and tied a Texas steer in one minute and forty-five seconds, while some of his competitors required five minutes for the feat.

POULTRY.

Is Ostrich Farming Profitable?

A gentleman who has been in South Africa and Buenos Ayres writes us at some length, giving his observations of ostrich farming and adding some reasons why it can never be made profitable in California. Six years ago, he says, a pair of breeding birds were worth \$1,000 in Cape Colony; in May last they could be bought for \$100. The farmers who were once going into the business on a large scale are reducing their flocks to a few pairs and selling the chicks for what they can get. All this has come to pass in a region which is the home of the ostrich, which has great deserts in which it likes to live, and where it can roam at will over thousands of acres fenced in by the farmer and good for nothing else. Of ostrich farming in Buenos Ayres he has seen nothing, but has come in contact with a discouraged ostrich farmer, who had just imported some birds, a large proportion of which had died. Half the birds that cross the ocean, he says, are likely to die on the passage. These are all the objections he makes to the industry, and some of them are serious if they do not admit of explanation.

Now no one expects in California a wild fever of speculation in the ostrich like the Mississippi scheme or the tulip mania in Holland during the last century. There is reason in all things. In the early days of California potatoes were worth a fabulous price per pound. This induced a large number of men to go into potato culture. The market was overstocked, potatoes fell to a merely nominal price and a good many men were ruined. Something like this has happened in South Africa. People heard wonderful stories respecting the profits to be made in ostrich feathers, and expected to gain fortunes in a day. They forsook their legitimate industries and rushed pell-mell into this, with a result that they might reasonably have anticipated. Many, doubtless, mortgaged their farms, and as the pursuit is, from its very nature, unproductive for several years, they had to sacrifice all their property to their creditors. This naturally created a surplus of birds and a ruinous fall in prices. The business has not continued long enough to gain a natural commercial equilibrium. Six years does not give opportunity for such an industry to test the laws of supply and demand. These farmers were at a distance from Cape Town, which is remote from the markets of Europe, so they were necessarily very much at the mercy of the middlemen. This is the universal law of speculative movements, and we can hardly suppose that ostrich farming in South Africa would prove an exception.

Our own experience is likely to be entirely different. Should any considerable number of our people decide to raise ostriches they will not recklessly rush into the business. They will not give up raising wheat, fruit, wine, cattle and sheep and turn their broad farms into ostrich ranches, stocked with birds from Africa worth \$1,000 or \$1,500 each. This objection, therefore, is sufficiently answered. We think that it is a foregone conclusion that the ostrich can be as easily acclimated in California as the turkey of the western forests could be distributed and domesticated all over the world. It does well in the mild climate of the coast of South Africa and also on the cold elevated plateaus of the interior. There is no reason to believe it ever lived in the deserts from choice. Being timid it sought them for safety. But if it needs deserts we have them in California in abundance. We also have in the Coast Range and the foothills of the Sierras a superabundance of that class of gravelly land which is not tilled, but is used for sheep and cattle ranges. There is no reason to conclude that because a flock of ostriches need several thousand acres of desert in Cape Colony for their sustenance they would not find a hundred, fifty, or even twenty-five sufficient in California, where grain, grass and vegetables, of which they are fond, are abundant. Nor are we justified in thinking, from what we know of their habits, that they would not thrive in a small inclosure in a fertile valley, where they are well fed and cared for.

Our climate is something more than temperate, and something more than semi-tropical. All forms of life thrive here, even the plants and animals that come from near the Arctic circle and from far within the tropics. Then why should not the ostrich be easily domesticated amid such favorable surroundings? We think it can profitably be introduced into the State, and while we deprecate speculation we shall be pleased to see this, like every other new industry, grow and prosper. Our resources of soil and climate are unlimited not only in extent, but in variety, and those who introduce and encourage a new pursuit that is legitimate are public benefactors. —*Chronicle.*

If you discover that a hen has deserted her nest during incubation, and that the eggs are cold, do not destroy them. Try to find another hen that is sitting, or one that is ready to sit, and put the deserted eggs under her, and wait until they have been set on at least twenty-two or twenty-three days, thus allowing two or more days extra time to make up for their having been chilled during the process of incubation. I have known a number of eggs in a setting to hatch after they had been deserted at least forty-eight hours. So do not give up and destroy the eggs without a fair trial. —*Niles' Poultry and Stock Book.*

Game Fowls.

The games are good layers when allowed free range all over creation, but just because they are so active naturally they fret and chafe when confined to winter quarters, and for that reason do not make good winter layers, at least I have not found them so.

Good mothers? Well, yes; I believe that good mothers provide food for their offspring, and protect them from harm. As a provider, the game hen, with a family on her hands, excels anything else that wears feathers. She will scratch up anything that is within ten feet of the surface, and the neighbor's yards and gardens generally suffer most. One industrious game hen will keep a whole neighborhood in hot water. I know all about it for I have tried it. Why didn't I shut her up in a coop? Just you try to catch a game hen and her chicks and you will know all about it. Once I picked up one of the little chicks that seemed a little lame; he chirped after the senseless way that chicks have if you touch one of them, and the next thing that I knew there was a rush, a whirl of wings, and for the next three minutes there was such a mixture of woman, sunbonnet and hen that you couldn't tell "tother from which." Don't you tell, but I did; yes, I did turn, and—ran away.

The games are hardy and the chicks are easy to raise—they are up and scratching and fighting almost as soon as they are out of the shell—but for all that, when the cholera comes along the game hens turn up their toes and die just as meekly as the Brahmas, Cochins, Rocks and all the rest of them. There is no breed of fowls in existence that is proof against chicken cholera.

In regard to the variety of games, if you conclude to keep them, get the kind that you like best. So far as useful qualities are concerned, one kind is just as good as another; and as for scratching, fighting and pure "cussedness" generally, one kind is just as bad as another. Perhaps you may think that I am rather hard on the games, but they were exceedingly hard on me in the first place. I kept them one summer and they caused me more "worryment" of mind than all the chickens that I ever had before or since. The four-foot fences that kept the other fowls in or out, they regarded with contempt. They visited the garden when they pleased, and as a natural consequence we didn't have any garden that we felt like boasting about. Our neighbors' gardens looked even worse than ours, and our neighbors' feelings were harrowed up worse than their gardens. If somebody didn't come along every morning about breakfast time and say: "Those confounded chickens have been in my garden again," we feared that some of the neighbors were seriously ill. And that game rooster! He fought everything on the place, and between times found time to kill all the roosters in the neighborhood. I expected to pay for a rooster every week, and it was not often that I was disappointed. So long as he killed only cheap roosters I didn't mind it very much, but when he began on the five-dollar birds, my patience and pocket-book gave out, and I soon got rid of every game on the place.

If you do get games, build a fence ten or twelve feet high all around your garden, and hire an active boy with a dog to keep them out of the neighbors' gardens and away from the neighbors' roosters. —*Fannie Field in Prairie Farmer.*

Poultry on the Pacific Coast.

Poultry keeping is a healthy and engrossing pursuit; it is an occupation pleasurable as well as profitable; it not only affords amusement and beneficial employment, but well repays for the time and labor spent while engaged in it, and nowhere can poultry be raised so economically and advantageously as on the cheap lands of the Pacific States and Territories. Notwithstanding these facts, this branch of industry has been so sadly neglected, so little cared for, that thousands of people indulge in the illusion that poultry-raising is merely a hobby and an expensive one at that, while other thousands content themselves with mongrels, taking no thought how they may improve their fowls and cause them to render a three-fold greater profit for the time and money expended thereon. It is a well-established fact that more money can be made in raising poultry, if of good quality, and producing eggs on this coast in proportion to the capital invested and the care required, than in any other branch of farming; yet it is no exaggeration to say that in California not one farmer in ten gives this industry the attention its importance deserves.

In the meantime, the daily mercantile reports of San Francisco continue to note the arrival of large consignments of eggs from Salt Lake and the Eastern States. In neither of these places are the conditions and climate so good as in our State. In the East heavy winters intervene and large expenditures are necessary for feed and buildings to protect the flocks from the inclement weather. Eastern eggs sell in our market for several cents less per dozen than California eggs. The cost of transportation and the commission also amounts to quite an item, leaving the producer, at present prices, from ten to twelve cents per dozen. Now if farmers East can afford to raise eggs at ten cents per dozen, the farmers of California, where all the advantages rest, can certainly afford to raise them at twenty and thirty and even forty cents per dozen. Eastern farmers have seen the importance of improving their flocks, and as a consequence the breeding of fine fowls there,

both for fancy and profit, has attained a high degree of perfection, and it is certainly time the farmers of California should emulate their example by providing a better class of fowls, both for sale in our markets and for egg-producing. Let them bear in mind the fact that it costs no more to keep good stock than poor, while every advantage is in favor of the former. —*Niles' Poultry and Stock Book.*

POULTRY RAISING—An English contemporary gives the following facts concerning the methods of poultry raising in Sussex, England: The usual food for fattening consists of ground oats, suet and milk—skimmed or unskimmed—to which sometimes a little linsed meal is added, especially in winter. At first chickens have to be fed carefully, if not charily. Allowing them three weeks, they are as a rule kept on oatmeal (made into gruel) one week; then suet is added, and the last week they are crammed. Milk is highly valued as an addition to the ordinary diet, and one poultry breeder has used as much as \$50 worth a week. Cramming is done with a machine, and the chickens have their crops filled twice a day. This process is continued for about a week, supposing a preparatory course to have been gone through. After about a fortnight the food ceases to take effect; but so long as they are not kept beyond the proper period, it is surprising how few deaths occur in their ranks. Fowls or chickens are fattened up to any weight, two pounds, or five, or eight or more. Mr. Oliver produced one weighing thirteen pounds. There are farmers who lay themselves out for this as a specialty, fattening all the year round, and keeping their coops full. Among this class Mr. Joseph Oliver takes the lead, keeping about 200 dozen always in hand, and killing forty dozen at a time in the busy season, even 6 times a week. He uses nearly 700 sacks of oats a quarter, \$800 worth of milk, and 9,800 pounds of suet. He keeps six men constantly employed, and twenty women. It is estimated that no less than \$350,000 per year is realized by the sale of chickens in the small district bordering on Brighton, the queen of the English watering places.

"Brown's Bronchial Troches are excellent for the relief of hoarseness or sore throat. They are exceedingly effective." —*Christian World, London, Eng.*

Market Report.

FLOUR—We quote: Best City Extra, \$5 55@56 70; Superfine, \$4 70@55 25; Interior Extra, \$4 75@55 25; Interior Superfine \$3 75@54 1/2 bbl.

WHEAT—The market has, at present, a very healthy tone. Quotations of recent sales are: No. 1 White, December, \$1 77; do January, \$1 77 1/2@1 78; do February, \$1 85@1 83 1/2.

BARLEY—January has the choice of late, most of the business being confined to this particular month. Recent sales show January prices from \$1 37 1/2@1 40 though \$1 38 1/2 seems to be the standard price. Breeding and Chevalier is hard to dispose of at \$1 44.

OATS—Fair Feed, \$1 70@1 75; Good, \$1 75@1 80; Choice, \$1 85@1 90 1/2 ctt. Milling \$1 95@2 1/2 ctt.

RYE—Business dull. Quotable at \$1 75@2 1/2 ctt. **FEED**—Ground Barley, \$1 1/2 ton; Cracked Corn, \$3 7/8 ton. Shorts, \$2 1/2 ton. Oatmeal meal the oilworks sell to the trade at \$2 50 1/2 ton, less the usual discount. Middlings, \$2 1/2@2 3/4 1/2 ton for lots at the mill.

HAY—Alfalfa, \$13@14 50; Wheat, \$13 50@17 50; Wild Oat, \$13 50@17 50; Mixed, \$12@14 1/2 ton.

PROVISIONS—Eastern Hams, 19 1/2@21c; California Hams, 16 1/2@16 1/2c for plain, 16 1/2@17c for sugar-cured canvased; Eastern Breakfast Bacon, 16 1/2@17c; California Smoked Bacon 16 1/2@15 1/2c for heavy and medium, and 16 1/2@16 1/2c for light and extra light; Clear Sides, 15 1/2@16c; Pork, \$21@22 1/2 50 for Extra Prime, \$23 50@24 for Prime Mess, \$25 50@26 for Mess, \$27 for clear and \$28@28 50 for extra Clear; Pigs Feet, \$16@18 1/2 bbl; Mess Beef, \$16 for bbls and \$8 50 for half bbl; Extra Mess Beef, \$17 for bbls and \$8 75 for half bbl; Family Beef, \$18@18 50 1/2 bbl; California Smoked Beef, 13 1/2@14 1/2 1/2 bbl.

FRUIT—We quote: Apples, 30@50c for common and 75c@1 1/2 for good; Pears, \$1 1/2@2 25 1/2 bx. Grapes, 75c@1 per box; Lemons, \$6@8 7/8 per box for Sicily and \$5@6 for Malaga; California Lemons, \$2 50@3 30 per box; Limes, \$5@6 50 per box for Mexican; Bananas, \$2@3 50 1/2 bunch; Mexican Oranges \$22 50@25 1/2 1/2 thousand; California \$2 25@2 75 1/2 1/2 box; Pineapples, \$6@8 7/8 1/2 doz; New crop Western Cranberries are offering at \$15@17 1/2 bbl.

VEGETABLES—We quote: Marrowfat Squash, \$8 @10 1/2 ton; Carrots, 30c; Turnips, 75c@1; Cauliflower, 75c@1 1/2 dozen; Cabbage, 50@75c 1/2 ctt; Garlic, 3/4c 1/2 lb; Green Peas, 7@8c 1/2 lb; Green Peppers, 50c@1 1/2 1/2 box; Tomatoes, 75c 1/2 box; Celery, 50c 1/2 doz; Mushrooms, 10@12c per lb; Onions, 75c@1 00; Dried Okra, 18c; Dry Peppers, 12@14 1/2 lb.

POTATOES—River Red, 50@75c; Early Rose, 60c @90c; Garnet Chile, \$1@1 10; Humboldt, 90c@1; Tomatoes and Petaluma, 87c@1 10; Peerless \$1. Cuffey Cove, \$1 to \$1 12 1/2 ctt.

ONIONS—Quotable at 85@90c for good and 50 1/2 sack for poor.

BEANS—Bayos \$3 75@4; Butter, \$3@3 25 for small and \$3 20@3 30 for large; Lima, \$3 75@4; Pea, \$3 20@3 30; Pink, \$2 90@3 10; Red, \$2 90@3 10; small White, \$3 20@3 30; large White, \$2 75@3 1/2 ctt.

BUTTER—We quote jobbing lots: Fancy, 30@32c; choice, 27 1/2@29; fair to good, 25@26c; inferior lots from country stores, 18@22c; firkin, 25@26c for good to choice, and 20@23c for ordinary; pickled roll, 24@27; Eastern, 18@23c 1/2 lb.

CHEESE—Fairly steady. California, 14@15c for choice; 11@13 for fair to good; do, factory, in boxes, 15@16c; Eastern, 16@17c; Western, 8@12c per lb.

EAGS—California, choice, 32 1/2@35c; Eastern, 27 1/2@30c; Lime, 27 1/2@30c per doz.

POULTRY—Live Turkeys, gobblers, 13@15c; do Hens, 13@15c; do dressed, 14@16c; Roosters, \$6 @6 50 for old and \$6@8 7/8 for young; Hens \$6 @7 50; Broilers, \$5@6, according to size; Ducks \$10@12 1/2 dozen; Geese, \$1 50@2 1/2 pair.

GAME—Market steady. Quail, 90c@1 1/2 dozen; Mallard Ducks, \$3 25@3 50; Sprigs, \$1 25@1 50; Canvasback, \$3 25@3 50; Brandt, \$1 25@1 50; Gray Geese \$2@3; White Geese, \$1@1 25; Honkers, \$4@4 50; Snipe, \$1 25@1 50 for English and 50@75c for common; Teal, \$1@1 12 1/2; Widgeon, \$1 25@1 50; Hare, \$1 75@2 25; Rabbits, \$1 25@1 75.

WOOL—Trade limited to small local orders. We quote fall: San Joaquin and coast, 8@12c; San Joaquin and coast Lamb, good, 11@12c; Northern Fall, free, 15@20c; Northern Fall, defective, 11@15c; Northern fall, Lamb, 15@20c; free Mountain, 11@15c.

HIDES AND SKINS—Dry hides, usual selection, 19@20c 1/2 lb; skulls one third less, and Mexican

Hides 1c 1/2 lb less. Dry Kip, 20c; Dry Calf, 21@22c; Salted Steers, over 55 lbs, 11c 1/2 lb; Steers and Cows, medium, 10c; light do, 9c; Salted Kip, 15 to 30 lbs, 11c; Salted Calf, 14@15c 1/2 lb; Dairy Calf 70 @80c each; Sheep Skins, 25@30c for Shearlings; 30 @50c for short, 60@90c for medium, and \$1@1 35 apiece for long wool and wool skins. Butchertown Green Skins bring higher prices.

TALLOW—Quotable at 9c@9 1/2c 1/2 lb for rendered and 11@12c for refined, both in shipping order.

MEATS—Following are rates for whole carcasses from slaughterers to dealers:

BEEF—Prime, 8 1/2@9c; medium grade, 6 1/2@7c; inferior, 5 1/2@6c 1/2 lb.

VEAL—Large Calves, 7 1/2@8c; small ones, 9@10c 1/2 lb.

MUTTON—Wethers are quotable at 4 1/2@5c and Ewes at 4 1/4@4 1/2c 1/2 lb, according to quality.

LAMB—Quotable at 6 1/2@7c 1/2 lb.

PORK—Live Hogs, 6 1/2@7c for hard and 6 1/4@6 1/2c for soft; dressed do 9 1/2@10c 1/2 lb for hard grain bogs.

FOR SALE.

DORR IMPORTED
Gordon, winner in Nebraska Field Trials. Has been used on chickens, grouse, quail, woodcock and snipe in the New England States, North Carolina, Virginia, Minnesota, Nebraska, Missouri, Iowa and Indiana. Retrieves without injury (dead or alive) anything from a snipe to a goose, from land or water. V. H. C. on the bench at Boston; also several money prizes and medals as a performing dog. Is probably the best broken dog on this Coast. On account of an attack of paralysis in my legs, which will prevent my using him this winter, I offer him for sale before returning to Massachusetts.

FRED A. TAFT, Truckee, Cal.

THAD STEVENS.

THIS THOROUGHBRED HORSE WILL BE AT Agricultural Park, Sacramento, for the season commencing Feb. 1 and ending the 1st of July next. Good pasturage for mares will be provided at \$3 per month. For terms and particulars apply to or address **W. M. MURRY, Agent,** Sacramento Racetrack.

IMPROVED
Blind Bridle & Winkers
FOR RACE HORSES.

Secured by Letters Patent, July 25, 1882.

Having thus described my invention, what I claim as new, and desire to secure by letters patent, is:

1. The part B, supported by the side straps of the bridle, extending back, as shown, the front having an opening into which the blind is fitted, substantially as herein described.

2. In a bridle, in combination with the extensions D, the curved blinds E, secured by side straps of the bridle, to give full freedom and ventilation to the eye while circumscribing the vision, substantially as herein described.

3. In a bridle, and in combination with the extensions D, blinds F, and side straps A, the screw, nut and washer E, to secure the blind and allow it to be set, substantially as herein described.

4. In a bridle, and in combination with the cheekpieces D and blinds F, as shown, the straps or bands G and H, connecting the branches or extensions above and below the eyes, and having the adjusting slides or buckles, substantially as and for the purpose herein described.

5. In a bridle, and in combination with the blinds F, supported and pivoted to the bridle so as to be movable about the point of support, the adjustable front straps or bands G and H, and the rear band I and the throatlatch or lash connected with the blinds, and adjustable, substantially as herein described.

The above are the claims allowed by the patent office, and though the corresponding letters do not appear on the cut, the general principle will be understood.

It meets with universal approbation, doing away with all the objections urged against blinds, and at the same time giving complete control of the line of vision. By throwing the lower portion of the blind up something of the same effect on the action follows as is induced by the weights. This is especially the case when young colts are the pupils, teaching them to bend the knee without the strain of weights on the feet.

For bridle of all descriptions apply to

JOHN A. McKERRON,
No. 327 Sutter street, San Francisco.

Woonsocket Rubber Co's Agency.

"Tips and Toe-Weights."

A NATURAL AND PLAIN METHOD OF HORSE-SHOEING:

WITH

AN APPENDIX TREATING OF THE ACTION OF THE RACE-HORSE AND TROTTER AS SHOWN BY INSTANTANEOUS PHOTOGRAPHY.

TOE AND SIDE-WEIGHTS.

BY

JOSEPH CAIRN SIMPSON,

(AUTHOR OF "HORSE PORTRAITURE.")

"Round-hoofed, short-jointed, fetlocks shag and long."—Shakespeare.

In Press, and will be Published about the first of January, 1883.

IMPROVED HORSE CLOTHING.

Secured by Letters Patent ISSUED MAY 27, 1879. REISSUED MAR. 29, 1881.

The above cut represents the body-piece, the patent also covering the improvements in the hood. The following are the claims granted:

1. An improved blanket or covering, consisting of the body-piece A, flap C, and the extension B, formed or united together, so as to cover the body and legs of the animal, substantially as herein described.
2. The blanket or covering A, having the flap C, and the extensions B, to fit the fore and hind legs of the animal, front fastenings F G, and the permanent straps or bands B, substantially as and for the purpose herein described.
3. The blanket or covering A, with its extensions B, permanent securing-bands B, and the front fastenings F G, in combination with the elastic neck-extension H, substantially as and for the purpose herein described.
4. The blanket A and hood J, in combination with the elastic connecting-strip I, substantially as described, and for the purpose set forth.
5. The close-fitting hood J, having the elastic band L beneath the jaws, so that they may be allowed to move without disturbing the fit, and adapted to be secured to the cover by means of straps, substantially as herein described.
6. The improvement in covering-blankets for animals, consisting of the blanket A, having the flap C, and permanent straps or bands fixed to it to secure it around the body, whereby the use of loose surcingles is avoided, substantially as herein described.

The right to make clothing in the United States will be sold on a royalty. Apply to the patentee,

JOS. CAIRN SIMPSON,

SAN FRANCISCO, CAL.

C. P. R. R.

TO
Sportsmen & Pleasure-Seekers.
THE
SOUTHERN PACIFIC R. R. CO.

RESPECTFULLY CALLS ATTENTION TO THE
SUPERIOR FACILITIES

AFORDED BY THEIR LINE FOR REACHING
with speed and comfort the best places in the State for
Sea Bathing, Shooting and Fishing.

TRAINS LEAVE SAN FRANCISCO DAILY FOR
MONTEREY,

THE MOST CHARMING
Summer and Winter Resort of the
Pacific Coast,

with its beautiful Groves and delightful Drives. Trout in abundance can be obtained from the several streams in the vicinity of Monterey, and the best shooting may be had in season.

THE BAY OF MONTEREY
Is noted for the extent and variety of fish which abound in its waters, notably Salmon, Rock Cod, Baracuda, Pompano, Spanish Mackerel, and Flounder. The above-mentioned attractions, in connection with the low rates of fare, rapid transit, and the superior accommodations furnished at the "HOTEL DEL MONTE," have made Monterey a paradise for sportsmen.

THE BATHING ESTABLISHMENT
OF THE
"HOTEL DEL MONTE,"

IS UNSURPASSED.
A SPACIOUS SWIMMING TANK
(150 x 50 feet)

FOR WARM SALT WATER, PLUNGE and SWIMMING BATHS.

ELEGANT ROOMS
For Individual Baths with DOUCHE and SHOWER facilities.

MAGNIFICENT BEACH

Of pure white sand for SURF BATHING, Etc., Etc.

THE FAVORITE ROUTE to those well-known Watering Places,

APTOS, SOQUEL AND SANTA CRUZ,

IS VIA THE

Southern Pacific Railroad,
(Broad Gauge), and the

SANTA CRUZ RAILROAD.

At PAJARO, the SANTA CRUZ R. R. connects daily with Trains of the S. P. R. R.

The S. P. R. R. runs through the counties of San Mateo, Santa Clara, San Benito, Santa Cruz and Monterey, in each of which game abounds in great variety. Notably

Quail, Pigeon, Snipe, Duck, Geese, Deer and Bear.

Lakes PILARCITOS and SAN ANDREAS are reached by this line. Stages connect with trains daily at San Mateo for those well-known Retreats, PURISIMA, SAN GREGORIO and PESCADERO. We would particularly call attention to the unlimited extent of range at and about SAN BRUNO and McMAHON'S for RIFLE PRACTICE.

These resorts are but a short distance from San Francisco and offer special inducements to the lovers of this manly sport.

SPECIAL NOTICE.

Sportsmen and others presenting Passage Tickets of any description issued by this Company will be entitled to

FREE TRANSPORTATION OF THEIR DOGS

when carried in Baggage Cars and put in charge of Train Baggage-men. Train Baggage-men are instructed to issue CHECKS for all dogs received in Baggage Cars.

In order to guard against accidents to Dogs while in transit, it is necessary that they be provided with COLLAR AND CHAIN. Guns and Fishing Tackle checked and carried free of charge. Gunstaken apart and securely packed in wood or leather cases may be taken in Passenger Cars.

TICKET OFFICES.—Passenger Depot, Townsend street, and No. 2 New Montgomery street, Palace Hotel. A. C. BASSETT, H. R. JUDAH, Asst. Pass. and Tkt Agt. Superintendent.

S. P. Atlantic Express Train via Los Angeles, Yuma, etc., leaves San Francisco daily via Oakland Ferry, foot of Market Street, at 9:30 A. M.

J. O'KANE,
MANUFACTURER AND IMPORTER OF
HARNESS, SADDLES, BLANKETS,
HARNESS, SADDLES, BLANKETS,
WHIPS, BOOTS, ETC.
767 Market Street, San Francisco.

SPECIAL ATTENTION given to the manufacture of "boots" of all kinds for horses. Can refer to all the principal trainers and horsemen on the Pacific Coast.

N. B.—My acknowledged superiority in this branch of business is largely due to careful observation and the valuable suggestions of the most skillful turfmens of the United States, the benefits of which I refer to the public in the shape of a GENUINE WELL-FITTING ARTICLE. Sole agent for Dr. A. H. Dixon's Condition Powders and for Makiuey's patent "Eureka" and "Eclipse" Toe Weights. Repairing done with neatness and dispatch. Has always on hand the finest assortment of English ladies' and gentlemen's saddles, bridles, whips, spurs, bits and 2½ lb race saddles.

FITS
A Leading London Physician establishes an Office in New York for the Cure of EPILEPTIC FITS.
From Am. Journal of Medicine.

Dr. Ab. Meserole (late of London), who makes a specialty of Epilepsy, has without doubt treated and cured more cases than any other living physician. His success has simply been astonishing; we have heard of cases of over 30 years' standing successfully cured by him. He has published a work on this disease, which he sends with a large bottle of his wonderful cure free to any sufferer who may send their express and P. O. Address. We advise any one wishing a cure to address Dr. AB. MESEROLE, No. 95 John St., New York.

THE BREEDER AND SPORTSMAN is the name of a new weekly paper, conducted by Jos. Cairn Simpson, and published at San Francisco, California, at five dollars per annum. The first copy is at hand. For beauty of typography, extent and variety of matter, and general make-up, it is unexcelled by its contemporaries. Mr. Simpson is author of a popular book, called "Horse Portraiture," and for more than a quarter of a century has been a popular writer on horse and sporting matters. He is admirably qualified to conduct such an enterprise, and the breeders of the Pacific Coast are to be congratulated upon having so able and gifted a champion of their interests.—St. Louis Eureka World

Vol. I. No. 26.
NO. 508 MONTGOMERY STREET.

SAN FRANCISCO, SATURDAY, DECEMBER 23, 1882.

SUBSCRIPTION
FIVE DOLLARS A YEAR.

MAMBRINO WILKES—Owned by Irvin Ayres, Oakland, California.

Our old friend, Charles J. Foster, editor of the New York *Sportsman* has never wavered in his allegiance to the noted stallion who was the sire of the subject of the present illustration. From the time when he first made his acquaintance—and that was a long time ago, until he went the way of all horses, he was ready to take up the cudgels in his defense. He had predicted a glorious career, when a foal he was nourished on cow's milk with a dash of old rum to give it flavor, and gloriously the colt fulfilled the promises. He was the foremost trotting stallion of his day, and after giving due weight to the circumstances attending his life, it can be safely said that he ought to rank with the best of any day.

George Wilkes, first called Robert J. Fillingham, was bred by Harry Felter, Newburgh, N. Y. He was foaled in 1856;

by Rysdyk's Hambletonian, his dam Dolly Spanker, by Henry Clay, his second dam by Baker's Highlander. His trotting record is brilliant, obtaining a score of 2:22 in 1868, and in a well-attested trial he made two miles in 4:44. A horse of fine action, although he had a peculiar method of moving his hind legs, giving them such a long sweep that at the furthest rear extension the foot was further back than in any other horse we ever saw. A long, easy stride, and yet with so much energy of action that there cannot be a question that with the improved training of the present time his mark would have been in the lowest notch for entire horses.

It is almost supererogatory to write of the get of George Wilkes. Nine of them dropped into "the list" this season, and from what we have heard there are others which only

require a chance to distinguish themselves. And then the second generation is giving evidence of being endowed with the prepotency. The sire of Phil Thompson and others are proving this in the most emphatic manner, and the family characteristics have become so well established that there is a greater demand for Wilkes colts than the breeders of Kentucky can supply. Mr. Corbitt in his late trip to the East had quite a long search before he could obtain one, and as he went with the determination to pay any reasonable price, and is well-known to have liberal ideas as to what really good animals are worth, the difficulty came from the general appreciation of the stock.

Our artist is always so accurate in his delineations that few written words are necessary to supplement the work of

the pencil. Mambrino Wilkes is very like his sire in conformation, excepting that he is a good deal larger. He is black, with a tinge of wine; sixteen hands in height, with fine length and great substance. In fair condition he weighs over 1200 pounds, and much of this is owing to his fine muscular development. His "middle piece" is capital, showing a large girth around the chest, with corresponding length of back ribs, quarters and shoulders well clothed with muscles. He has a very handsome head and a clear eye with the kindest expression. He was bred by B. J. Treacy, of Fayette Co., Kentucky; foaled April, 1874. His sire George Wilkes, his dam Lady Christmas by Todhunter's Mambrino, better known as Idol. His second dam was by Pilot Jr., and she from a mare of Kentucky Whip blood. This is a pedigree of the most "fashionable" kind. Hambletonian, Mambrino Chief and Pilot Jr., backed with thoroughbred, it would be an ultra hypercritical cavalier who found fault with it. As has been shown, George Wilkes combined the Hambletonian and Clay. Idol by Mambrino Chief, his dam by American Eclipse, second dam by Shakespeare, third by Sir William, fourth by Orphan, and his fifth dam by imported Buzzard. Maud S, Jay-Eye-See, Noontide and others have shown the value of the Pilot Jr. blood, while the Mambrino Chief ranks as of the bluest shade in trotting pedigrees. From the form and breeding of Mambrino Wilkes it was to be expected that his colts would show merit, and those that have been trained verify the estimate. Alpheus we saw commencing his education on the Oakland course this last summer, and we were very highly impressed with his showing for future excellence. He is a very handsome colt, and of fine action, and when a two-year-old can show a half mile in 1:18, as we understand Alpheus did in Stockton, there are the best reasons to expect that he will be "fit for any company" when he has had the benefit of a little more training. The pinkeye had him in its clutches just before the trot at Stockton, and he was suffering from it at the time. We have seen others of the get of Mambrino Wilkes, which are of high form, and as those were beaten for a premium given for Wilkes' colts at the San Joaquin Valley Fair, the award made by good judges, those we have not seen must be still superior.

This is the first son of George Wilkes to come to California, and the only others we know of are the late importations of Mr. Corbitt. As soon as we have the time to spare to visit it Mr. Corbitt's breeding farm we will give a list of the prominent winners of this family, and when that appears there will be none to deny that the blood will be of vast importance to the breeding interests of this Coast.

TURF AND TRACK.

Coney Island Jockey Club.

The Executive Committee of the Coney Island Jockey Club announces that the following stakes, to be run in 1883, will close on the 1st prox. for the June meeting, which will begin June 12 and continue June 14, 16, 19, 21, 23, 26, 28 and 30:

The Great Two-Year-Old Post Stakes, at \$500 each, half forfeit, with \$1,000 added; three-quarters of a mile.

The Great Two-Year-Old Selling Sweepstakes, at \$50 each, half forfeit, with \$1,000 added; three-quarters of a mile.

The Seaboard Stakes, for three-year-olds, at \$100 each, half forfeit, only \$25 if declared May 1st, 1883, with \$1,500 added; non-winning allowances; mile and three furlongs.

The Coney Island Stakes, for three-year-olds and upwards, at \$25 each, play or pay, with \$750 added; mile and a furlong.

The Coney Island Cup, for three-year-olds and upwards, at \$50 each, half forfeit, with \$1,500 added; three-year-olds, 90 lbs; four-year-olds, 108 lbs; five-year-olds and upwards, 114 lbs; sex allowances; two miles and a quarter.

The following will be run during the September meeting, which is fixed to begin on Saturday, September 1, and to continue on the 4th, 6th, 8th, 11th, 13th, 15th, 18th, 20th and 22d:

The Autumn Stakes for two-year-olds, at \$100 each, \$25 forfeit, with \$1,000 added; winning penalties, non-winning and maiden allowances; three-quarters of a mile.

September Stakes, for three-year-olds, at \$100 each, \$25 forfeit, with \$1,000 added; winning penalties, non-winning and maiden allowances; mile and three-quarters.

Autumn Cup, a handicap sweepstakes for all ages, at \$150 each, \$50 forfeit if declared the day before the race, \$25 only if declared out by July 1, with \$2,500 added; the weights to be announced two days before the race; three miles.

The Great Long Island Stakes, for all ages, at \$250 for starters, with \$2,500 added and a claim to the Woodlawn Vase; horses entered January 1, \$50 forfeit; by June 1, \$100 forfeit, and by September 1, \$150 forfeit; three-year-olds, 95 lbs; four-year-olds, 108 lbs; five years and upwards, 114 lbs; sex allowances; four miles.

All entries should be addressed to J. G. K. Lawrence, Secretary, at the corner of East Twenty-seventh Street and Madison Avenue, who, on application, will send blank forms for entries to each of the above stakes.—*New York World.*

SAVANNAH JOCKEY CLUB.—The annual meeting of the Savannah Jockey Club is announced for January 16, 17, 18 and 20. The stakes closed on the 1st inst. as follows: Ten Brock Stakes, mile heats, for two-year-olds—Roderick Dhu, Mordant, Lady Dean and W. P. Burch. Lamar Stakes, for two-year-olds mile heats, winner of the Ten Brock Stakes to carry five pounds extra, the same four entries. Bonaventure Stakes, mile heats, for three-year-olds—Bonnie Kate, Bantam, Homespun, Belle of Charleston and Jane Foster. Oglethorpe Stakes, mile heats, for all ages—Palmetto, Duke of Montalban, Constantine, Colonel Sprague, Vingt-et-un and Jane Foster. Savannah Cup, two miles, for all ages—Fair Count, Duke of Montalban, Colonel Sprague and Helen Wallace. In view of the Engeman movement at New Orleans it seems as if the Savannah meeting must suffer, especially if the stables of Burch and Pettingill, from which a majority of the above nominations are made, go on from Charleston to New Orleans at once.—*New York World.*

J. R. KEENE'S HORSES IN ENGLAND.

A Chatty Letter Anent Horses and Trainers —Don Fulano's Leg—Etc.

The following account of Mr. Keene's horses in England is copied from the *New York Spirit of the Times*, and is the latest full intelligence regarding "the stable." It is written by the English correspondent of that popular journal, and we are pleased to learn that the quondam Californian has such good prospects. He has certainly been very successful in his ventures on the turf, and if he would send the breeding department to this State we feel sure that he would enjoy the still greater triumphs of winning with colts of his own breeding and rearing.

The pleasure of breeding winners of the big events is a more intense gratification than when the trophy is gained by an animal secured by purchase. There is the satisfaction of having, in a measure, created the champion, something akin to an author when his work has received the approbation of the critics, or, perhaps, a better illustration is that of the playwright when called before the curtain to receive the enthusiastic plaudits of the assemblage. Although Mr. Keene's chief business in California was in San Francisco, he can scarcely fail to be cognizant of the advantages "this Coast" presents for the breeding of thoroughbreds.

Those who never have visited California, but who saw the Santa Anita two-year-olds, must acknowledge that such animals as Gano and Lucky B can only be reared where everything is favorable to their growth.

It is not merely size, as the muscular development is in keeping with their stature, and in place of "gaugling," overgrown breeds there is symmetry and proportion. We still hope to see Mr. Keene locate his stud farm in this State and then, with the sires and dams he now owns, shall look for a continuation of his successes at home and abroad.

The wide expanse of down land about the village of Shipton, on the border of Wiltshire and Hampshire, has an interest for American readers, for it is here that Mr. J. R. Keene's horses are trained, and that the mighty Foxhall, who has made an unfading name for himself in the turf, underwent the preparation which enabled him to carry off, last year, the two great "back end" handicaps, the Cesarewitch and Cambridgeshire. The luxurious herbage of these downs makes admirable galloping grounds, on which horses may do their work in safety, when the going at Newmarket, baked to brick-like consistency, is perilous to horses' legs, and this is proved by the fact that advantage is taken of this particular district by several trainers of eminence. Danebury, perhaps the most famous training ground in the country when the Marquis of Hastings, the Duke of Beauford and the leading sportsman supported John Day, is within some eight or nine miles; and the Danebury gallop, which includes Stockbridge race course, adjoins the grounds occupied by Tom Cannon of Houghton, the Prince of English horsemen, and as good in the capacity of trainer as of jockey (for the horses nominally trained by Olding are really trained by Cannon); while not far from here, at Kingsclere, is John Porter's stable, from which this year have come the winners of the Derby, Oaks and Teu Thousand, to which, most likely, would have been added the St. Leger, had the redoubtable Tom, who rode the winner in the other three of the five classical contests, been in the saddle. The simple story of Dutch Oven's Leger seems to be that C. Loates, a capable jockey in his way, made too sure of winning on Lord Stanford's Geheimniss, and came away too soon. Cannon, who knew more of the mare, having owned her and sold her as a two-year-old to the Earl of Stamford and Warrington, never makes too sure of anything, and though he generously protests that Loates obeyed orders implicitly, has confessed to me that he should have laid back on Geheimniss, had he been up, and thinks he might have got home.

This, however, is a digression, and in a consequent article I hope to tell the readers of the *Spirit* more of Tom Cannon and Mr. Lorillard's horses now under his charge; but the digression is a natural one, seeing that during the year—at a retaining fee higher than was ever before paid to a jockey in England—Cannon's services have been secured for Mr. Keene's horses, trained by William Day, the uncle of Mrs. Tom.

It has been said that Shipton is on the borders of Hampshire and Wiltshire, and, as a matter of fact, the Park House inn, where Foxhall stood during his handicap triumphs, before the stables at Cholderton Lodge (William Day's present residence) were completed, is so exactly on the border that a very extraordinary circumstance is recorded of it. Forty years ago a man was killed at its doors in the presence of many people, and it has never been decided in what county he died, on which day he died, or what killed him. As the clock struck twelve a blow from a drunken barrister knocked the man under the hoofs of the leader of a coach which was pulling up at the door of the Park House inn, and whether the blow or the horse's hoofs was the cause of death, whether or not he died before the clock finished striking, and in which county will never be known. Park House stables are now deserted, however, though on the door of the box Foxhall occupied are nailed the plates he wore in his great races, and William Day wisely continues to lease the place with the idea of using it as a sort of hospital, should any of the horses at Cholderton catch colds or show symptoms of any disease that might threaten infection.

At Cholderton Lodge itself a range of stabling has lately been completed on the admirable system set forth by William Day in his well-known book, "The Racehorse in Training." Here are roomy, well-paved boxes and stalls, in every one of which the best arrangements for ventilation and draining are made. The hot fetid atmosphere, too common to the majority of stables, is never felt here. "William of Woodyeates," as the master of Cholderton used to be called, when he occupied the training ground which made his fame in the land, farms a large estate, but cannot grow corn or hay sufficiently good for thoroughbred stock, and buys all that he uses; the home paddocks are large and convenient, the downs near at hand, and if, with every advantage which Mr. Keene's liberality and William Day's accomplished manipulation can command, the white jacket and blue spots is not often borne to victory, the fault must lie with the horses.

In writing of one who has for so long a time past occupied so prominent a place on the English turf (nearly a quarter of a century has passed since William Day rode his own colt, Promised Land, in the Derby, and finished fourth, beaten a neck from Sir Joseph Hawley's Musjid, who afterwards declared forfeit in a match with Promised Land), it is difficult

to avoid repeating some of the hundred and one anecdotes of coups and strokes of policy with which the name of Mr. Keene's trainer is associated. But the temptation must be resisted for the object of this paper is merely to discuss the bearers of the white, blue spots, now at Cholderton, their appearance and prospects.

During the present year, the American horses in England have not done much, though that coveted trophy, the Ascot Cup, was carried off by the famous son of King Alfonso and Jamaica, who, however, succumbed to the American bred Fiddler in the Alexandra Plate, run the next day; and my private opinion is that the defeat was mainly owing to the absence of a horse to lead Foxhall in his gallops. He completed his preparation by himself. Many times I have watched him tearing over the ground, his attendant Hatcher up. Hatcher was so devoted to his charge that when his wife presented him with a son, the child was christened Foxhall straightway. The great horse always seemed to go splendidly, but there can be no doubt that a horse when worked by himself does not do as much as he seems to do. He wants something to go with him, and, as it were, evoke a spirit of emulation, to make him exert himself, and the need of a schoolmaster caused the pupil to fall short at Ascot. It is very likely he might not have won the Ascot Cup, had not Martin kept Faugh-a-Ballagh, who was started to make a pace for the Duke of Beauford's Petronel, hard at it, though on this head it is easy to fall into error. The Duke did not feel by any means confident of Petronel's success, but thought the horse had a very fair chance, and the three-year-old Faugh-a-Ballagh was merely started to make the running. Tom Cannon, on Foxhall, watched only Archer, on Petronel, and they lay behind a long way, believing that the three-year-old would have shot his bolt and been done with long before home was reached. Still, however, he kept his lead.

"I wondered when he was coming back to us," Tom Cannon said afterwards in giving me a description of the race, "and when we were in the straight it occurred to me that he wasn't coming back at all, and that I had to go on and catch him."

Catch him he did, cleverly enough, but notwithstanding that he had done all the work a horse could do by himself (and the one criticism on William Day's style of training is that he works his horses too tight), Foxhall was not wound up and trained to go the long three-mile journey in the Alexandra Plate, and, with five to two on him, he was beaten by the Duke of Hamilton's son of Preakness. It was hoped that in the Champion stakes at Newmarket, for which last year Bend Or beat Iroquois, or in some of the Cup races, Foxhall would have wiped out his defeat, but an enlargement outside a joint on a foreleg stopped the horse, and necessitated blistering, the effects of which kept him at home, though now he is perfectly sound. What is to be done with the horse I cannot, of course, say. It has been rumored that his owner is willing to sell him.

Mr. Keene's luck has been bad in several particulars, and notably with regard to Don Fulano. Had this colt only kept sound he would, in all likelihood, have won a great name for himself. When unfit to run, and with 100 to 1 against him (excellent evidence of want of condition), it will be remembered that he finished third to Peregrine and Iroquois for the Two Thousand Guineas, and several good horses were behind him. When he and Foxhall were at their best there was not much more than seven pounds between them, and this means that he would have won last year's Cambridgeshire (fortunate was Mr. Keene to have such a "second string" as Foxhall, able to win with the unprecedented weight of nine stone!) had he kept sound. A good gallop, however, after, I believe, a commission had been out to back him, settled his chances, and when I saw him a fortnight after the race he had a leg like a bolster. Brought round by William Day's skill and attention, this year he was once more going grandly, but there was always a fear lest the leg should go again, and it was impossible to wind him up and depend upon him in this year's Cambridgeshire, in which, as his trainer expected, the leg "went." The luck with Bookmaker was also very bad. In the Corinthian Plate, at Goodwood, he was not thoroughly wound up, for the reason that it had not been decided much before the meeting that he was to run, but till want of condition stopped him he was going wonderfully well, and the race was enough to show that he had a grand chance for the Cambridgeshire if leniently treated by the handicapper. He was so treated, and for a long time before the race was first favorite, but he had to be stopped in his work, and hence the failure in the contest which Mr. Peck's "hunter" Hackness carried off.

These are the four-year-olds, and, as a class, they are far superior to the threes. Golden Gate can gallop for three-quarters of a mile or ten. The short head beating he received from Isabel in the Summer Cup of the July meeting, at Newmarket, created a very incorrect impression on this point, for this is the longest race run on the English turf, the distance being three miles, four furlongs, one hundred and thirty-nine yards; but the horses only raced in earnest for some half mile at the end, though the time, 7:25, is far from bad. Golden Gate was made a favorite for the Derby without a penny of the owner's money being on, simply from dread of the Foxhall stable and its astute ruler, but it is to be feared that he is a bad horse, and that Romeo is not much better. This colt hit his hock during a rough passage to France to run for the Grand Prix, in which Foxhall established his fame by bearing off from Tristan, Fiddler, Scobell, and others, last year; but Romeo, had he been able to run, could scarcely have been dangerous. Some of Mr. Keene's horses have been handicapped with ludicrous severity at some of the smaller meetings, where incompetent or dishonest handicappers play their wildest pranks.

The two-year-olds include Potosi, an own brother to Foxhall, Blue Grass, Bolero, and Crown Point, and it is quite on the cards that some of these may make a name for themselves. Potosi grows very much like his brother, but has not Foxhall's size. This colt hurt himself as a yearling, but is well enough now, and is of an improving sort. Bolero is quick, but does not seem able to stay; and probably the pick of the basket will prove to be Blue Grass. He can gallop, and such chances as Mr. Keene has of winning the Derby next year depend, I think, on Blue Grass; the chance, however, is very faint, indeed, with M. Lefevre's Ladislas, Prince Bathany's Fulmon, Mr. W. S. Crawford's Kew and Energy (I cannot believe in Macheath's power to get down the hill from Tattenham corner, brilliant as some of his performances are), Blanton's Prince, Tom Cannon's Sigmophone, Goldfield, Beau Brummel, Tyndrum, Bon Jour, and Madlock, in the way. Well placed (and placing is the great art of racing), these will all win races, that is to say, three of them will, for I fear Crown Point is very bad, though he, like the rest, is a good-sized, well-framed animal, a little wanting in quality, but with counterbalancing good points.

The best of the yearlings I think will prove to be Sister to Foxhall, a charming mare, with a curious resemblance to the ways of the old horse. She goes much after the style of her two brothers, is an exceedingly light-hearted filly, and playfully kicks the whole way up her first canter every morning,

but it is all good nature, for she is a very kind mare. She swishes her tail just after Foxhall's fashion, and, so far as can be judged at present, is likely to do honor to her distinguished family. The young lady developed an extraordinary habit of catching mice, and on one occasion killed a young rat, but she has now adopted a kitten, a daughter of one of the two kittens of which Foxhall was so fond, and her protegee will doubtless take the mousing business into her own claws. Another very promising yearling is a chestnut colt by King Alfonso—Hester, and there are a couple more, a bay colt by Virgil—Boniform, and a second bay by Monarchist—Return.

If only these are good enough, they will learn the way they should go at Cholderton, and valuable results will follow. It need hardly be said that Mr. Keene's stud could not possibly be better placed than they are; indeed, Foxhall's double victory in the two great handicaps (not to mention the Grand Duke Michael Stakes and Select Stakes) are notable triumphs for a trainer. How much Foxhall improved after leaving Newmarket, is manifested by the fact that, while in the City and Suburban Bend Or gave him two stone six pounds, and beat him a length and a half, in the Cambridgeshire Foxhall actually beat Bend Or, at even weights, and Bend Or could not have been so much off, seeing that less than a fortnight before the Cambridgeshire he had won the Champion Stakes, beating Iroquois into third place. I have on more than one occasion heard an unrivaled judge of horses and racing—the Duke of Beaufort—speak in warm terms of praise of the manner in which William Day has turned out Mr. Keene's horses, and next year no victories will be more cordially received than those of the white jacket, blue spots.

The Plunger and Duchess.

If Theo. E. Walton was intent on obtaining notoriety he could not have affected his purpose more effectually than has been accomplished by the newspapers. His plunging propensities were not the only things to bring him prominently before the people through the medium of the press, but he is now credited with being the cause of a noble Duchess so demeaning herself on the race-course as to bring any amount of obloquy on herself and her entitled spouse. From the *Referee* of November 26th the following is taken:

A deal of mysterious paragraphing has been done recently in reference to the quarrels between her Grace of Montrose and Mr. Stirling Crawford of the one part, and Sherrard the trainer, and various more or less important employes of Bedford Lodge, of the other. Everybody in any way interested knows all about the quarrel, and by now knows that it arose through private information having been afforded to Walton, the plunger, during his first and most successful visit to these islands. During the time that Walton was winning large sums of money it was wondered how he could obtain the "tips" which he undoubtedly did obtain about certain horses, and all sorts of rumors were abroad, not only as to what Walton did and said, but as to what was said and done by those who considered themselves injured by his successes. The now historical quarrel between Walton and Sir John Astley arose out of Walton's having received information which should not have been accorded an outsider—information which, if my memory serves me aright, prevented the burly baronet getting nearly so good a price about his horse as he should have had, because of the forestalling which resulted from it.

Forestalling is always a dangerous game to play; irate owners have before now carried the war into the enemy's own country, and routed him with great slaughter. It was to forestalling that the suppression of public ready-money betting in London some thirteen or fourteen years ago was due. Mr. "Boy" Wright, the then leviathan commission agent, whose advertisements paid the working expenses of more than one sporting paper, took liberties similar in kind if not in degree to those taken by Walton last year, and the result was that the "through the post" men had to beat a hasty retreat across the border. Sir John Astley was satisfied to have his temper out verbally with Walton, and, so far as he was concerned, there the matter rested. As ready-money betting at race-meetings appears to be perfectly legal, it is difficult to see what else he could have done, unless pistols and coffee, boxing-gloves or big sticks had been called into requisition. Possibly Sir John did not care to let the matter trouble him to this extent, feeling certain, after his own chequered experiences, that Nemesis would, sooner or later, overtake the bounciful Yankee. This was by no means the case with others who suffered the smart of Walton's intrusion. These showed their indignation in a variety of ways. A large amount of the action which has made the colors of Mr. Stirling Crawford and his wife so unpopular on the turf is distinctly traceable to the plunger's operations.

It may be borne in mind that on Walton's reappearance here this year he commenced much the same game as he had previously played but that soon a check was put upon his progress. During the panic which his arrival here caused in certain proprietorial bosoms, the Thebais and other scratchings which led to so much popular excitement happened; it was about the same time that the Duchess of Montrose made herself unpleasantly conspicuous owing to the too public airing of a grievance upon the heath at Newmarket. As straws show which way the wind is blowing, so these trifling incidents made it evident that some unpleasantness was brewing between the duchess and those employed by her. Eventually the secession of Sherrard was announced, and with his secession came the news that the Duchess of Montrose and Mr. Stirling Crawford had received extremely valuable information as to complicity between him and that fruitful cause of all the mischief, Mr. Theodore Walton. The leading jockey of the stable was also implicated. That Walton got good information last year from somebody was not denied at the time. So far from that, he used to boast about his ability to get it. That such information was of immense value is at once shown when we contrast what he did while in receipt of it with what he did after it was withdrawn from him. Still there was no reason that can be discovered—or that is stated—for supposing Sherrard and the chief wearer of the all scarlet gave this information to Walton. There are always plenty of underlings in an important stable who must know sufficiently well what is going to make their news saleable. This might easily have been shown, I think, had the business of clearing up the characters of both trainer and rider been commenced judiciously.

BREEDER AND SPORTSMAN.—Our contributor, Joseph Cairn Simpson, is the editor of a new and handsome weekly entitled the BREEDER AND SPORTSMAN, published in San Francisco. The new journal aims to elevate the literature of the turf and other sports far above the plane upon which it has moved on this coast, and to present matters relating to live stock. Mr. Simpson is a very well-informed and acceptable writer, and he has associates who understand all the intricacies of outdoor sports. The new paper has our best wishes for success in its peculiar field.—*Pacific Rural Press*.

OVERMAN AND ROMERO.

Last Saturday's Trotting at the Bay District Course.

Saturday last there was a fine attendance on the Bay District Course to witness the match between the two cracks of the Coast, at least those which were supposed to be the champions of the tracks of the Pacific. Overman sustained his reputation, as he won so easily that the race was no criterion of his form; Romero made the poorest exhibition of his career, and with, perhaps, the exception of his debut at Santa Rosa, never made so feeble a showing. Horses are prone to "get off," to lose condition in spite of the efforts of the trainer, and in defiance of care and the best judgment fail at the most critical period. In match races it is expected that a want of condition will be known in time so that forfeit can be declared, and the money of the backers saved. But in many instances matches are play or pay, and even when the customary "half forfeit" is the condition, the owner may hazard the other moiety in hopes that something will turn up to justify the "throwing the helve after the hatchet." The trouble, in all probability, with Romero was the long let-up after his race at Stockton, and, in fact, he has done so little this year that it is not likely he has been "keyed" to concert pitch at any time. "Let-ups" are dangerous and when Governor Stanford compared two of them to one break-down it was a forcible illustration of the mischief that arises from a cessation of exercise.

Had Romero been compelled to trot a race every week since he made his memorable performance at Stockton it is nearly certain that the "teens" would have to be reached to beat him. That is, of course, with health and freedom from accidents. It was rumored that having been lately clipped he had taken cold which caused a general stiffness of the muscles, and it is apparent that something was the matter, as in none of the heats did he show any of the fine turn of speed he surely possesses when "at himself," and even a "thirty gait" around the first turn in the first heat was enough to carry him to a break. The "muscle sore" claim appears to have some foundation inasmuch as he did better in the third heat than in any of the others.

Overman is without doubt the great horse his Eastern admirers claim him to be, and from present appearances he will have to be accredited as the champion of the Coast, always, however, leaving his stable companion, St. Julien, out of the calculation. He was always a favorite of ours, and from the time he was first harnessed we never surrendered the opinion that he was destined to take high rank in the trotting world. It is somewhat doubtful if Romero has any greater speed at his best and the action of the chestnut is preferable to keep up the rate for a distance. Still Romero has two years to catch up, and in that time if he fails to take a record much lower than his present gauge we shall be sorely disappointed.

The early portion of the afternoon was pleasant, though by the time the second heat was called the weather had changed and there were fogs and chilliness. The track was in good condition saving that the first turn was wet and soggy from the moisture seeping through the hill on the south, and this part of the track is shaded so that the sun cannot strike it.

There was more than a fine attendance, a larger concourse than has been seen since the time of the "big races," and the assemblage was composed of the foremost people of the town, while there was a large number from all parts of the State.

Now that Romero is evidently so much out of shape that he cannot be expected to make any sort of a race with Overman, we would like to see Director try his hand, and if Albert W had been kept at work his presence would add greatly to the interest. Although it is too much to expect of colts, four and five years old, to lower the colors of a horse of the capacity of Overman, a race between these three will be well worthy of a journey to the course.

The following is the account of the heats, though the race was so one-sided as to leave little chance for a description:

Before the start the pool-selling was lively, the rates being \$50 on Overman to \$31 on Romero. The horses were called promptly at two o'clock, and after the usual preliminary exercise to get their legs and lungs in order, they took their positions, Romero having the pole and Overman the outside. Hickok drove Overman, while Goldsmith handled Romero. After two false starts the word was given on an even start for the first heat. In rounding the first turn Overman out-trotted Romero, the latter leaving his feet on a bad break, from which he did not recover until he had fallen six or seven lengths behind, Overman passing the quarter under a pull in 0.37½. Overman being still under a pull and Romero settling down to his work, he crept up and at the three-quarter pole had come within a length of the leader. In the stretch, however, Hickok urged his horse a little, and notwithstanding Goldsmith plied his whip and sent Romero for all that was in him, Overman crossed the wire ahead, with plenty to spare. Time, 2.24.

Second Heat—Pools sold at \$200 for Overman, and \$60, \$57 50 and \$55 for Romero. By this time the wind was blowing briskly and the sky was overcast with fog, contrasting strongly with the warm sunshine and calm that prevailed early in the afternoon. When the horses came on the track there was no time lost in sending them off, and the word was given on the second trial. The start was an even one, but Overman began to draw ahead on the turn, and from there out he increased or decreased his distance as his driver pleased, and though Romero was forced on the stretch under the whip, Hickok landed his horse an easy winner in 2.25.

Third Heat—It was so evident that Romero was over-matched that the betting was dollars to dimes, and pools were sold at \$100 to \$10, very few backing him at that low figure. The word was given as the noses of the horses crossed the wire on an even line. Rounding the southern turn Overman was pulled up and Romero took the lead,

which he increased to several lengths on the back stretch, but by the time the half-mile pole was reached Overman was given his head and closed the gap very fast, passing the three-quarter pole ahead of Romero, coming in and winning the heat and race in the same easy style he had won the others. Time, 2:23½. Following is the

SUMMARY.

BAY DISTRICT COURSE, December 16, 1882.—Mile heats, best three in five, for a purse and stake of \$4,000.
O. A. Hickok names s g Overman.....1 1 1
J. A. Goldsmith names g s Romero.....2 2 2
Time—2:24, 2:25, 2:23½.

The End of the English Racing Season.

With the end of the official racing year in England on the 25th ult. nearly all the London dailies and sporting papers at once blossomed out with their annual contribution to racing literature in the shape of statistics and a general exaltation over the failure of the "Yankee stables" to triumph, as they did in 1881. "Pavo," of the *Morning Post*, leads off by saying: "The collapse of the Yankees who were to have 'licked creation' by carrying off all our great weight-for-age prizes, if not one or more of the classic races of 1882, not only presents a striking contrast to their unparalleled triumphs of 1881—which will go down to posterity as the American year of English turf history—but supplies an equally noteworthy feature as the unprecedented series of reverses that favorites met with in almost every leading event, which will cause the season just terminated to be remembered by backers in general as one of the most disastrous on record. Foxhall's slovenly performance in the Ascot Cup, in which he only just crawled home in front of a moderate three-year-old like Fagha-a-Ballagh—mainly owing to the artistic jockeyship of Tom Cannon, who honestly earned Mr. Keene's £1,500 annual salary by that solitary ride—was the only prize of any consequence, if I except the Great Eastern Handicap, won by Aranza, that fell to the share of the two American stables during the season."

Another feature of the year in England was the general defeat of first favorites. Out of hundreds of important events they got home first in only about thirty, the failures beginning with Poulet's success for the Lincoln Handicap, which was followed by Passaic winning the City and Suburban; Sbotover and St. Marguerite, the Guineas; Prudhomme, the Chester Cup; Sbotover, the Derby; Fiddler, the Alexandra Plate; Friday, the Goodwood Cup; Dutch Oven, the Doncaster St. Leger, and so on for nearly all the important autumn handicaps. Nor does the year end with anything remarkably good among the two-year-olds, for, although Macheath carried off the honors, it is very doubtful if he will stand training next spring for his three-year-old engagements, while a bet of a "thousand even" has been taken that the Derby will not be won by either Macheath, Keir, Fulmen, Prince Maurice, Galliard, Sigmophone or Ladislas, each of which, with the exception of Prince Maurice, who did not start, did fairly well as a two-year-old.

The first of the winning tables presented by the *Sportsman* is that of jockeys, which, of course, is led by Fred Archer for the ninth successive year. His record of victories this year shows 210 as against 220 last year, his total number of victories since his first on Athol Daisy in 1870 being 1,853. Second to Archer is Charley Wood with 182 victories, a position he held last year with a credit of 153. The following is the record of the first twelve for 1882:

	Mounts.	1st.	2d.	3d.	Unplaced.	W. o.
F. Archer.....	564	210	118	79	157	8
C. Wood.....	617	182	143	88	204	3
G. Fordham.....	305	79	59	53	114	—
G. Barrett.....	411	73	65	65	208	1
C. Loates.....	533	63	48	63	159	—
T. Cannon.....	221	58	54	25	93	2
T. Osborne.....	208	41	39	33	95	1
S. Loates.....	215	40	26	33	116	2
R. Wyatt.....	236	38	36	34	128	—
C. Bowman.....	182	37	26	18	101	—
E. Martin.....	274	35	36	37	166	—
J. Woodman.....	238	30	33	42	133	—

In regard to special honors, Tom Cannon (Mr. Pierre Lorillard's trainer) heads the list, he having ridden the winner of the 2,000 Guineas, Derby, Oaks and Ascot Gold Cup. Archer's most important success was the St. Leger, with Dutch Oven, while he also won the Chesterfield Stakes with Galliard, and the Woodcote Stakes with Beau Brummel. C. Wood was also prominent, having ridden the winners of the 1,000 Guineas, the Prince of Wales Stakes at Ascot, the Manchester Tradesmen's Cup, the Doncaster Cup, the Cesarewitch and the Middle Park Plate. Fordham's victories included the Goodwood Stakes, the Champagne Stakes, Dewhurst Plate, Queen's Vase and Hardwicke Stakes at Ascot.—*New York World*.

Stock Sales.

W. G. Scoggin, of Dille, Washington county, Oregon, to Maj. Magoon, of Mt. Vernon, Grant county, g c Hannibal, 3, by Hambletonian Mambrino, dam Kittie Lewis by Silver Duke. Price, \$600. Mr. L. B. Lindsey regards this colt as one of the finest in Oregon, and at our suggestion promised to write a descriptive article of him for the *Rural Spirit*.

Jay Beach, proprietor of the Cascade Stock Farm, Lake county, Oregon, to Joseph Buchtel, of East Portland, b f Cesnola, 2, by Altamont, dam L. S. Dyar's Kate, by Mike, a son of Vermont. This filly is nominated for the three-year-old Breeders' Stake for 1883. Mr. Macmanus arrived here this week with the filly and delivered her to Mr. Buchtel. Price, \$450.

T. H. Tongue, of Hillsboro, to Hon. D. M. Gault, of this city, chestnut gelding, three years old, by Woodburn, dam Snowflake, by Volscian. Same to L. C. Triplett, Carlton, Berkshire boar, by Royal George, dam Princess Alice. Sire and dam both bred by Wm. Niles, Los Angeles, Cal. Also three sows by Royal George, and bred to Capt. Rider, No. 3969; same to H. S. Cross, Oregon City, Capt. Rider, sired by Commodore, No. 1525, the most successful prize winner ever in California.

The above items are cut from the *Rural Spirit*, Portland, Oregon, which show that there is a disposition to encourage home breeding in that State. While there is great benefit derived from the introduction of "new blood," and strains from a distance utilized, there is a disposition to carry this too far, and ignore superiority from the fact that it is a home production. We have seen several animals, for which big prices had been paid in the East and Kentucky, which were decidedly inferior in breeding, form, performances, to those which could have been bought here for less than half the cost. Still there will be advantages to follow nearly every importation, and while those who have plenty of money can gratify their penchant for foreign articles, others not so well supplied with cash can avail themselves of the chance of the same quality of goods for a moiety of the price.

Batchelor's Invitation to the Countryman.

"I see one of your correspondents told a good story in last week's *Gazette* about Jack Batchelor—that one where he was going to shoot any driver out of the sulky that got up behind Mattie Graham—but I know a better one than that even," said a Chicago horseman the other day.

"In the summer of 1878," he continued, "there was a meeting in July at Columbus, Ohio, and among the races on the programme was one in which Proteine, Adelaide, Midnight, Deception and other good ones took part. 'Uncle Jack' was in it with his old favorite, John H. and wore the familiar white linen duster and the steel-rimmed spectacles.

"Of course it was well known that Proteine was by odds the best horse in the party, and when the boys met the day before the race to arrange the 'stake' it was decided that Proteine should win and Adelaide get second money. Midnight was known to be very fast, but he was left out of the combination, as his owner, Mr. Charles Reed, of Erie, Pa., had instructed his driver (Shillington) to always get to the front as soon as he could, and stay there as long as possible. Deception, who was driven by W. P. Kinzer, was also left out of the combination, because if the entire outfit was taken in there would be no money in the affair.

"Well, as usual in such cases, things didn't work very well. Midnight was a good deal better horse than the boys had put him up to be, and in spite of all they could do he managed to win two heats. Proteine also had a couple, and how to give Adelaide two, so that she could get second money, was the question. They finally started in to do it, however. Previous to this, Midnight had 'pinched' Adelaide a little in one or two heats, and before the start for the fifth heat Splan, who was driving the mare, notified Shillington that if any more 'funny business' was attempted somebody would get hurt. This talk didn't alarm Shillington much, for when they got to the head of the home stretch in the sixth heat, he began crowding Adelaide to the pole again. Splan was as good as his word, though, and in an instant Midnight's sulky was overturned, the driver lying on the track and the horse running away. The rest of the horses kept on, and right under the wire Bachelor and Kinzer had a close finish for third place with John H. and Deception, the one that secured the position being entitled to fourth money, and as Deception was not in the ring, it was, of course, desirable that John H. should 'get there.' When the horses came back to the stand after the heat (which was won by Proteine), Kinzer accused 'Uncle Jack' of having done some foul driving. The argument became rather warm, but finally Bachelor ended it in a very summary manner by hitting Kinzer a crack with the butt end of his whip, the driver of Deception biting the dust in less time than it takes to tell it. Kinzer lived at Columbus, and the audience was largely composed of his friends. When they saw him lying there with the blood running from a ghastly-looking wound in his head, there was trouble, and in an instant the quarter stretch was filled with an excited mass of humanity howling for Bachelor's blood.

"Seeing what a serious turn affairs had taken, some of the boys hustled Bachelor into the weighing stand, which was directly below that of the judges, hoping to keep him concealed until the storm blew over. But the crowd soon discovered what had been done and began to howl for gore again. One big countryman, who had his pants in his boots, was particularly conspicuous.

"Let me in there," he shouted to the men who were guarding the entrance to Bachelor's hiding place. 'Just let me get at the scoundrel once.'

"About this time somebody handed to Bachelor through the window of the weighing stand a big horse-pistol—one of the old-fashioned kind with a barrel like a gun. Just as Bachelor received the weapon, the man outside who was thirsting for gore began to howl louder than ever.

"Let me in there," he cried; 'I only want one chance at the villain.'

"As he ceased speaking, 'Uncle Batch's' treble voice was heard issuing from the precincts of the weighing stand; 'Let the ——— in,' he said; 'I can't miss him.'

"When the ferocious countryman heard these words the case assumed a new aspect, and his desire for vengeance abated very suddenly. He knew that the old man behind the spectacles would shoot, and, more than that, he knew that he 'couldn't miss him.'—*Breeder's Gazette*.

Prescott Driving Park.

Following are summaries of the events at the winter meeting, Dec. 5, 6, 7 and 8, 1882, under the management of the Arizona Jockey club:

First day, Dec. 5—mille heats, best two in three; purse \$250; first horse \$150, second horse \$100; entrance ten per cent.
L. C. Palmer names b m Kansas Maid (L. C. Palmer).....1 2 1
D. C. Thorne names d g Melvin's Dick (N. Beakford).....2 1 2
W. A. Smith names b g Harry Spauken.....did not start
Second day, Dec. 6—Running; half-mile heats, best three in five; purse \$250, first horse \$200, second horse \$50; entrance ten per cent.
O'Connor & Blonger name br g Brown Dick, four years, 105 lbs. (Fenton Mount).....1 1 1
W. R. Campbell names br g Frenchy, aged, 132 lbs. (D. Stanfield).....3 2 2
D. C. Thorne names b m Kitty Stevens, 123 lbs. (J. Jefford).....2 3 3
Time—0:54, 0:57, 0:58.

Kitty Stevens' jockey fouled Frenchy's jockey and the judges fined Frenchy.

Third day, Dec. 7—Running; mile dash, sweepstakes; purse \$250; entrance ten per cent.
O'Connor & Blonger name Brown Dick (Fenton Mount).....1
D. C. Thorne names Kitty Stevens (Herculano).....2
Time—1:57.

By consent horses carried two pounds under weight.
Fourth day, Dec. 8—Running; mile heats, best two in three; purse \$346; entrance ten per cent; sweepstakes.
O'Connor & Blonger name Brown Dick, 105 lbs. (Fenton Mount).....1 1
D. C. Thorne names Kitty Stevens, 136 lbs. (A. Sparks).....3 2
R. Schults names Red Eye, 113 lbs. (Jeff Young).....2 d
Time—1:55½, 1:59½.

State Trotting—Two-Year-Old Stake.

STOCKTON, Dec. 19, 1882.

The following event will take place in September next: Best two in three, mile heats. Nominations close February 1st, 1883; \$50 entrance fee; \$25 when entry is made, and \$15 July 1st, or declare out. Whole of entrance money to be divided—50 per cent., 25 per cent., 15 per cent. and 10 per cent.

Four Moneys—Five hundred dollars added by the society; \$100 each for the winners of moneys. One hundred dollars for the stallion whose get wins first money. Conditions same as 1882.

N. B.—This is the most liberal two-year-old trotting stake ever given. The percentage of entrance money should not exceed one per cent.
L. U. SHIPPEE, President.
J. L. PHELPS, Secretary.

Model Stables.

A visit to the Commodore Kittson farm, Erdenheim, near Chestnut Hill, a day or two ago, fully demonstrated that under Major J. R. Hubbard's management the Erdenheim stables will play an important part in the racing announced for the coming year. Since Mr. Welch sold the farm to Commodore Kittson last summer many improvements have been made, some of which are completed, while others are in progress. The most important of the improvements are a new mile track for training purposes and a stable for horses in training, which will contain box-stalls for forty-five head of horses, living accommodations for trainers, grooms and stable-boys, store-rooms for horse clothing and saddlery, feed-rooms and a veterinary room. The inside circle of the stable gives an exercising track an eighth of a mile round, which is well lighted and thoroughly protected against the weather. It is the intention to lay out, eventually, the inside plot of ground as a handsome garden, with a fountain in the center. In the matter of drainage and other necessary conveniences Major Hubbard says that the stable will be second to none, not even to Mr. Pierre Lorillard's Rancocas stable, Mr. Geo. L. Lorillard's stable at Westbrook, or Mr. Reed's stable at Saratoga. Major Hubbard also promises that the boys' quarters shall be fit for human beings, which is something rarely found with the best of stables. There will be bedrooms for boys and grooms, with bath, reading and smoking-rooms. Ample barns are to be built for the storage of hay, straw and feed, and in short, everything is to be done to afford comfort to man and beast that ingenuity can conceive or money procure. The stables are to be lighted either by gas or by electricity. In the matter of stock, although some forty head were sold a few weeks ago, the place is very much overcrowded, there being no less than 4 stallions, 32 brood mares and 25 weanlings in the breeding division under John McCloskey's care, while ready for training under Percy Benn's superintendence there are 9 two-year-olds and 16 yearlings. The former will be three-year-olds in January and the latter two-year-olds, and as they are a well-bred lot, as will be seen below, they must play, as before said, an important part in the racing of 1883, especially in the stakes yet to close. The two-year-olds are as follows:

B f Bedotte, by Bonnie Scotland, dam Ermengarde.
Br f Bric-a-brac, by Bonnie Scotland, dam Martica.
B f Corona, by Glenlyon, dam Marguerite.
Ch f Equity, by Enquirer, dam Fanny Mattingly.
Imported ch c Pocollo, by Soucar, dam Lovebird.
B f Repella, by Alarm or Reform, dam Long Nine.
Br c Rretreuch, by Reform, dam Kate O'Neill.
Br f Retribution, by Reform, dam Nemesis.
Ch f Temptation, by Great Tom, dam Tribulation.
Yearlings—Ch f Ailene, by Alarm, dam Australind.
Ch f Albia, by Alarm, dam Elastic.
B c Bonnie Chiel, by Alarm, dam Sister of Mercy.
Imported ch c Donald A, by Scottish Chief, dam Algebra.
B f Iona, by Lytleton, dam Ione.
Ch f Issaquena, by Alarm, dam Essayez.
B c Keystone, by Alarm, dam Berisina.
B c Lewis, by Lytleton, dam Emily Fuller.
Imported Miss Easton, by Soapstone, dam Victoria.
Ch c Perilous, by Alarm, dam Delight.
Ch c Panique, by Alarm, dam Maggie B.B.
B f Rande, by Reform, dam Sue Ryder.
Ch c Rataplan, by Alarm or Reform, dam Lady Lumley.
R c Ruchiel, by Alarm or Reform, dam Sabina.
B c St. Paul, by Alarm, dam Lady Salyers.
Ch c Theodorus, by Alarm, dam Theodosia.

But little is known of the merits of the above youngsters, and as Major Hubbard is a combination of "Airtight" Puryear and "Silent" Pincus, your correspondent is unable to say which of the two-year-olds he expects to win the Saratoga and Kentucky stakes, but that he expects to put the name of Norman W. Kittson on the list of winners of these stakes is certain.—*Philadelphia Correspondence New York World*.

Racing at New Orleans.

Mr. W. A. Eugeman and his party, after completing arrangements with the Louisiana Jockey Club, left New Orleans on Thursday night and arrived home late on Sunday night. Mr. Eugeman says that he is more than satisfied with the outlook for a successful winter season. He was treated with the greatest courtesy by Mr. R. W. Simmons and the other officers of the club. The hitch which caused several days' delay in perfecting arrangements was that the club wanted racing suspended for thirty days previous to the beginning of the regular meeting of the Louisiana Jockey Club, which takes place soon after Easter. He objected to thirty days, and ten days was finally fixed upon. As to the details of management Mr. R. W. Simmons will act as presiding judge, and for the general supervision of the racing a board of governors, to consist of prominent members of the Louisiana Jockey Club, will be selected. The pools and betting privileges will remain as at Brighton Beach, under Mr. Eugeman's personal supervision, while the restaurant, bar and gaming privileges will be farmed to the highest bidders. In reply to the question, "When will you start back?" Mr. Eugeman said: "I shall start, if possible, on Thursday night and take some thirty or more horses now at the beach. I shall also take the most trustworthy of my summer employees and a full supply of 'mutuel' machines. Mr. McGowan will, as heretofore, act as secretary and clerk of the scales, and Mr. Battersby will have charge of the finances." As to the probable starters Mr. Eugeman said he did not think there would be any lack of horses. McMahon and Caldwell, the starter, had secured some forty head from the neighborhood of Nashville, Colonel McDaniel and Dick Shea were on their way from Memphis with fourteen head, while the owners recently engaged at Columbia, Montgomery and Charleston had signified their intention to start for New Orleans at once, as also had several owners of stables resident in Texas, which, with some twenty or thirty horses already stabled on the track and several promised by Mobile owners, will make a total of over 100 horses to begin racing with on the day originally fixed, viz., Saturday, December 23. Weather favoring, he will race on Monday (Christmas day) and two other days during the week.

"How about racing by electric light, which, it is said, you will do?"

"Well, I may do so if I find that the public are anxious to witness it, provided it can be done with safety. I notice that the poles had been erected for some previous efforts in that line, which I believe were abandoned. But there is one thing certain—New Orleans is splendidly lit up by electricity at night. But at present I shall confine my endeavors to successfully establish racing, including steeplechasing, to which the people of New Orleans are comparative strangers."

To the question about transportation Mr. Eugeman said that there was no lack of accommodations; that the horse-car ran from Canal street direct to the track, and that he believed both lines intended to lay branches to the rear of the grand stand at once.—*New York World*.

RACING AT NEW ORLEANS.—The New Orleans *Picayune* gives the following as the conditions under which Mr. W. A. Engeman will race over the track of the Louisiana Jockey Club for the next five years: "They are to use the track this year free of charge; the second year they are to pay \$2,000; third year, \$3,000; fourth year, \$4,000; fifth year, \$5,000. They are to use the track from the first of November of each year until ten days before the spring meeting of the New Louisiana Jockey Club. After the completion of the latter event they will be allowed to resume racing and continue until about the middle of May." In an interview Mr. Engeman said he would begin racing on Saturday, the 23d instant, and continue three days each week, and that during the season he expected to offer as much as \$50,000 in added money. In place of paying any rental this year he would have to make a number of improvements which would at once become the property of the jockey club. Among them is the construction of additional stables, kitchens, a field-stand and a saddling paddock. He would also have to advance considerable money for transportation of stables from Nashville and Memphis, Tenn.; Charleston, S. C.; San Antonio and Dallas, Tex., and from Baltimore, Brighton Beach, Hartford and elsewhere. Mr. Engeman and his party may be expected to arrive back to-day, and they are to return at once with all the pool-selling and betting material used at Brighton Beach, including a small army of assistants and reporters, anxious to spend the remainder of the winter in the Sunny South.—*New York World*.

THE STABLE.

English Ideas of Horse-Shoeing.

Having preserved a few copies of the *Field*, the great English authority in matters pertaining to breeding domestic animals, stable management, etc., containing short articles on shoeing, with the intention of incorporating them in "Tips and Toe-Weights," we give a portion of them here. These were published in January and February, 1881, and the views in places are so similar to those which we made public some seven years ago, that it was very gratifying to find them corroborated. The Charlier method is simply an improvement on the Goodenough system, which the author introduced into England nearly twenty years ago, the improvement consisting of restricting the metal to the width or rather thickness of the wall or crust of the hoof, and using a much lighter shoe. Then it is put on with a much greater degree of nicety, the horn only being cut away where the metal takes its place.

Should there be any necessity for a full shoe this is assuredly a better plan than incumbering the foot with a load of iron, unless there is proof that weight on the heel is a requisite for fast trotting. Although we are not yet prepared to say authoritatively that weight is not needed on the posterior portion of the foot, all of the experiments so far have led to the belief that it can be dispensed with. There may be horses which will be benefited by weight on the posterior part of the foot, and if so, a properly made bar-shoe will be the kind to use. We are satisfied that the bar, or round shoe, owes whatever merit there is in it to the pressure on the frog, when this is effected more in accordance with nature there is a greater gain.

The Charlier is superior on account of its near approach to a natural state, the whole thing being in replacing so much of the wall with a harder material. That it cramps the heel is also apparent, though far less than the ordinary shoe. The following article is from the *Field* of February 5th, 1881:

During the last fortnight of Arctic weather the state of the London streets has been a subject of interest to all and sundry, whether they walk or drive. Various feeble efforts have been made with the object of giving foothold to the unlucky horses whose mission it is to drag heavy weights over a surface whose quality of material varies in about every other street. Here we find a shovelful of ashes; anon we splash into a "freezing mixture" (*vide Lancet*) of salt; next small curling stones (called by courtesy gravel) are sent spinning along the frozen surface by the foot which they are supposed to benefit. Now, there is no sort of reason why horses should not be able to travel over the streets in safety, whatever may be their condition. It is merely a question of rational shoeing. In the ordinary mode of "roughing" a horse the heels of his shoe are turned up, and his foot is thereby prevented from sliding forward on ice, consequently he can stop or even back his load; but when he wishes to start, and in pursuance of this intention attempts to dig his toes into the ground, his feet fly from him in every direction, and he either falls heavily, or escapes that fate by sheer good luck. The antidote to this evil is simple enough, and why it is not universally applied is a puzzle to me. One would think that the numerous veterinary forges of London ought amongst them to be able to shoe a horse for frosty weather; but, judging from results, the contrary appears to be the case.

The whole secret of traveling over ice may be expressed in three words, viz.: "Rough the toe." A catch at the toe of each foot is perfectly effective. With three such catches, one at the toe, and one to each heel, a horse is independent of weather. Snow will ball in a foot so shod; but in towns that is seldom a very serious consideration, as when it balls it is more or less in a state of thaw, and as a consequence disappearing; while, if it be very deep, the balling does not much matter. Snow will under no circumstances ball in a foot shod with a leather sole, nor in a foot shod with a short tip, it being the heels of the shoe that perfect this undesirable manufacture. In theory the catch at the toe may be objected to, as being likely to make the horse stumble. In practice it has not that effect, as all the horses in Canada can testify. These remarks apply to harness and draught horses, whose toes are bound to come to the ground every time they start their load. Saddle horses take a sufficiently firm hold of the ground with short tips in front; and the hind shoes should have a catch rather on the outside of the toe, to obviate danger of tread and overreaches.

Omnibus horses should, in common with all others who drag heavy weights on slippery stones, let alone ice, have the toe of the hind shoe square, and a broad catch to it, the toe of the hoof projecting in front. The Midland Railway Company shoe their cart horses thus, and with the best results. When the foot is brought up "all standing" by a toe calk, "there it is!" When by calkins at the heel, the back sinew is too often strained. The observant will see on cab ranks many horses

whose heels behind do not touch the ground at all; this contraction of the sinews is the result of the above form of sprain. My brother sportsmen must have personally experienced the difference between catching the toe, and the heel, of their shooting boot upon an unexpected obstacle. A few moments' discomfort, and, with the possessors of ill-regulated minds, a possible malediction, see them through the first casualty; while the loss of a day's, or of several days' sport may be the consequence of the latter. Hunters in this sort of weather are on the straw ride; but if shod with short tips they may go anywhere on the roads.

We have lately heard a great deal about working horses without shoes, but the writers on this subject have been almost to a man theorists. If anyone had given his own experience, his testimony would have been interesting, not to say valuable. "Free Lance" appears never to have practised what he preaches in his book "Horses and Roads," although one of his correspondents used a barefooted pony. One gentleman wrote to the *Daily Telegraph* to the effect that he drives a barefooted horse eight miles daily. Now I know by experience that light work—say eight or nine miles daily—may be done by a barefooted horse, supposing his feet to be good hard ones; but that is mere exercise. Work is another thing. In no known part of the globe are horses able to work unshod, at any rate in front, on hard ground. In ancient times slippers were worn by horses and mules before shoes were invented. The want, though not supplied, made itself felt.

Nowadays we hear a great deal of South American horses, Indian ponies and the like. As a matter of fact, these unshod horses inhabit districts where they never encounter a stone. Put them to work on rocky ground, and they are either shod or lamed. A friend of mine, lately returned from America, tells me that, though the horses were unshod on the plains, when a march over rocky ground (the Andes for example) was contemplated the same horses were shod with a shoe of raw oxhide. These shoes last about a week, by which time the mountains are generally crossed, and the soft plains regained. Pack mule seldom, if ever, require this protection to their feet; but even with them exceptions exist to prove the rule. And apropos of barefooted steeds, I may observe that they decidedly slip more on greasy ground with a hard substratum than horses with shoes or tips. A barefooted horse is far more pleasant to ride, to my mind, than a shod one—so long, that is to say, as he can go comfortably; but I do not know that he is more pleasant than when shod with light tips. I have not, however, yet given a fair trial to tips behind, although I mean doing so, as what experiments I have ventured on have been satisfactory.

To return to the insecure foothold of the bare foot. Example: In the beginning of the present season I was riding a horse out hunting with no shoes behind at all. The day was pouring wet after a spell of dry weather; the country, an extra-rural provincial. My troubles began at a bank, my horse's hind feet flying somewhere under his girths, and landing him on his tail, in luckily so trifling a ditch that, although we emerged with a most unbecoming scramble, we did emerge without dissolution of partnership. I tried to console myself with the thought that my flier had a soul above cramped banks and ditches; but, shortly afterwards, in crossing a common at best pace, where the other horses all slipped about very much, my steed suddenly came on to the floor bodily, and worse, on to my leg, his hind legs having again gone from under him. And this sort of thing, having gone on in a modified form all day, set me a thinking. As aforesaid, the ground was hard below, and very greasy atop. The horse is a flat-footed one, and this was, of course, "against him," as the phrase goes.

Hunters shod with short tips go so much better through dirt than when they wear full shoes, that I am compelled to believe that their heels, being free, expand on coming to the ground, and contract when the time comes for dragging them out of holding clay, etc. I have not been troubled with an overreach since I have used tips, and fancy that the fore foot gets more quickly out of the way of the hind ones when thus shod.

Nimshivich asks (*Field*, Jan. 22): "What is the condition of frog which enables one horse to go with a five-inch tip, and another only with the whole shoe?" The answer is that a thrushy frog, if badly diseased and in a state of inflammation, is in too tender a state to withstand stones, etc.; and I once knew a case in which the sensitive frog was all but exposed, the horny frog, or what thrush had left of it, being worn down. The animal, a four-year-old mare, very soon recovered, and had sound frogs until a railway accident destroyed her at six years old. All sound horses will go sound in short tips; but they will not thump their feet down with the action so dear to London coachmen, as if they wished to penetrate the pavement with their legs. They will use their knees less, but their shoulders more. Thus shod, I have never had an instance of a horse breaking his knees on the road, with one exception, and he slipped on a piece of ice when being led at exercise. His shoes were full Charlies, and he broke his knees through his kneecaps. Had he had tips, I think he would have stood up. The full Charlie shoe is not such a safeguard against slipping as the tip, which puts the heels as well as the frog on the ground. Now I must disagree with "Nimshivich's" friend as to our forefathers being experts in shoeing. The very old English shoe, worn by the "destriers" (which we should call cart-horses) that carried the knights of old, was clumsy in the extreme. Its great width, however, allowed some pressure to the sole, which was so far good, as experience shows that an upared sole can stand pressure. I can only account for the horses of our grandfathers standing work at all, shod as they were, firstly, by their being nearer to their Arab ancestors, and consequently more sound in themselves, than our horses; and secondly, by the custom of turning them out to grass on every available occasion. They lost condition, went broken-winded, etc.; but their feet had a chance, or rather nature had a chance of restoring their feet; and, all the world over, there is nothing like dew and night air for anything like fever in the feet. Harness horses had no weight on their backs; those belonging to rich men were not unreasonably worked; the mail coach horses did their stage in the allotted time, and the number of legs which they used in progression was optional with them. In many ways our horses have certainly deteriorated, and in nothing more than in unsoundness of wind.

The first carthorse I ever heard roaring caused me to turn round and make a mental note of the circumstance. Now I often hear them; and, more remarkable still, last summer a pony of the polo description cantered by me, roaring like Prince Charlie himself.

The greatest errors in the matter of shoeing history are to be found in veterinary works of a comparatively late date—say sixty years ago. What countless horses have been ruined by the theory about the descent of the sole! Our great-grandfathers and grandfathers had plenty of horses lamed by their shoeing, but they ascribed the lameness to every cause but the right one. Chronic laminitis they called "chest founder," and many a horse lame in his feet was

tortured by having his legs fired and blistered. Nor is all that practice quite changed in the present day, though much improved. To return, however, to the descent of the sole. Youatt, in "The Horse," page 418, says that, unless the sole be pared, "that portion of horn which in the unshod foot would be worn away by contact with the ground, is suffered to accumulate until the elasticity of the sole is destroyed, and it can no longer descend, and foundation is laid for corns, contraction, and navicular disease!" Fancy a man calling himself a director of public opinion about horses, and not knowing that the sole never attains more than a certain thickness, whether it be on the ground or not! When thick enough it scales away, leaving a new sole ready for any emergency below it. The sole being pared required protection, and could not even be touched by the shoe. Hence the necessity for the foot surface being beveled off; and hence contracting corns, and navicular disease.

I do not say (because I don't know it) that a horse shod with tips, and having his frog as nature made it, would never have navicular disease; but it stands to reason that he has the best chance possible of escaping it. Firstly, he minds where he is putting his feet, and does not bang them recklessly about. Secondly, the thick horny frog shields the navicular bone and perfonans tendon.

Otterbourne asks how Charlier shoes in front only answer? I reply, very well; but I prefer the nearest approach to nature all round, excepting for horses drawing heavy loads, and they have been discussed above. With the old-fashioned way of shoeing, only feet of medium quality, neither too strong nor too weak, had any chance of standing sound. Without shoes, sooner or later, all horses really worked on the hard will be lame. With tips, all horses can do all reasonable work, excepting those suffering from navicular disease. Tips will not make lame horses sound at once, but they give many diseases of the foot the best possible chance of righting themselves, especially if the owner of the horse possesses the quality of patience! Last season I owned a mare who had such thin feet that she could do nothing at all barefooted on the road. With short tips, however, she had, if anything, rather too much action for a hunter. At present I have a horse whose heels are quite on the ground; yet he goes better like this than he did with full shoes. Tips are no new notion. The "lunette" shoe of Lafosse was a tip. I do not think tips need be very narrow, unless they are let in *ala* Charlier. The heels, however, should always be beaten down quite thin. Clips are most useful in keeping light shoes or tips in their place; but they should on no account have a place cut out for them in the horn. Let them just be hammered on the outside of the crust. Also let the clinches be cut off and knocked down, but not rasped, as the crust is rasped with them, and a chance is given to the nails to break out. Let the sole and frog be on no account touched with a knife. Shorten the toe as much as possible on the occasion of each shoeing, with a rasp. And above all, "gentle reader?" if you don't happen to be master in your own stable, never let the words "Charlier," "tip," or "nature" escape your lips. If, however, you are not a slave to your groom, my experiences may be of use to you, and in any case are very much at your service.

P. S.—The above remarks having been delayed in transmission, I take advantage of the opportunity to add some more last words, and to make some remarks, which I hope will not be considered impertinent, on the letters written by various gentlemen *in re* Horse Shoes which appeared in last week's *Field*. First, Waverly, who was persuaded out of the Charlier system by his farrier, says that I take for granted, for reasons which I do not attempt to explain, that grooms and smiths are opposed to Charlier shoeing. I speak from experience, as all the grooms, excepting two, with whom I have ever discussed the subject, are opposed to it, for "reasons which they do not attempt to explain." As to smiths, no less than four of them have refused to shoe my horses at all on this principle; they have all been owners of superior forges. I never had my horses better shod than by a village blacksmith who did what he was told, but even he charged me 2s. per set more for tips even than for the old heavy shoe! I may say as regards Waverly *De te fabula narratur*, as Mr. Fardon's speaks his own sentiments. Had Waverly persevered with the shoeing, the discolored horn would have grown and been worn out; his horses, not being lamed by the original bruise, would not have been lamed later on, any more than mine were.

I agree with M. B. that Charlier shoes, not approaching the corn place, cannot cause corns, any more than a gag snaffle could give a sore back. I should like, however, to know whereabouts the soles of his horses were worn unduly thin, as the frog of a flat foot, being always prominent, shields the part "aft" of the point thereof, and the shoe should protect the forward part, it being as impossible as undesirable to have the shoe in a very flat foot flush with the sole. Is M. B. quite sure that the soles were in a natural condition? He says he never has the frog touched with a knife; but, if not absolutely watched, smiths will, under the pretense of removing "ragged dead horn," thin the sole. I am curious on this subject, as last season I possessed a hunter with absolutely pumiced soles, which improved immensely in the three months that I owned him, one foot regaining the normal appearance, although in both the coffin bones had descended when I bought him, as a stop gap and as an experiment. I much regretted that I parted with him, but a severe accident was accountable for that. Capt. Gillon is of my way of thinking. Would he tell us whether the material for shoes which he mentions is procurable in England? He, like myself, has given the system a fair trial.

Suaviter in Modo also agrees with me, for his harness shoe is the modified Charlier, with which I have shod many thin-soled horses until the sole grew thick. Apropos of his remarks on curby hocks, I may say that several years ago I bought a remarkably clever young Irish mare, fired for curbs, and with curbs which appeared callous. At the end of a season of Charlier hind shoes, the enlargements were absorbed; and I sold her to a dealer at the end of the next. Finally, Mr. G. Johnson is specially happy in his remark, that in most forges "the quantity of iron employed far exceeds that of common sense." To turn from this well-worn subject to a fresh one, will H. H. kindly tell me whether his hunters can eat Goode's luncheon cake out hunting with a double bridle in their mouths? I find that I must make one more remark on these weary shoes. Suaviter in Modo misunderstands me as regards three nails only to a shoe. I use three nails in the *tips*, of which I have given a sketch (there is hardly room for more), and it was to these infinitesimal tips only that I referred.

Bicycling is rapidly becoming universally popular, and scarcely any section of the civilized world now is without a bicycle club. There is a flourishing organization in Port Elizabeth, Cape of Good Hope, and a club in Cape Town has about seventy members.

The lower bay has swarmed with coots lately.

BICYCLING.

From Oakland to San Jose and Return.

On Saturday last two Oaklanders left that village for San Francisco by the 7 a. m. boat, prepared for a bicycle trip. Skirting around the city front until the depot of the S. P. R. R. was reached, the 8:30 train was taken for a few miles, to get away from the city and avoid some bad roads, after which wheels were to be used. They were joined at Valencia street by a San Francisco rider, and the trip commenced.

At Millbrae the riders turned aside to run through the grounds of the Mills, Hayward and Howard places, and, riding in a leisurely fashion, Redwood City was reached in time for an early lunch. Leaving this place by a fine road, the travelers diverged to run through the fine grounds of Flood, Doyle, Latham, Woodlawn and several others, finishing up at Palo Alto, where an hour was pleasantly spent, and, thanks to the courtesy of those in charge, they were enabled to interview the famous fillies Wildflower and Hinda Rose, the noted stallions Electioneer, Piedmont and others, and see the youngsters at their work; but the declining sun of a short December day and some eighteen miles more of road warned them that they must leave, which they did with regret, reaching their destination shortly after five. A good bath, dinner, a smoke and a walk about town finished a pleasant day's work, and made beds acceptable.

The following morning was damp, disagreeable and threatening, and it was decided not to run any further south, as had been thought of, for fear of being caught in a storm; in fact, it looked as if it might even become necessary to take trains for home; but shortly after ten it was decided to start and ride as far on the return trip to Oakland as possible. The roads were in fair order, although a little heavy from dust, and the first fifteen miles were made in an hour and three-fourths, Centerville being reached in time for a capital dinner, over which and the post prandial cigar an hour and a quarter was spent. Passing through Alvarado and Mount Eden, the weather cleared until the sun appeared before San Lorenzo was reached. The remainder of the trip, through San Leandro and Brooklyn into Oakland, was completed shortly after five, and the party separated, much pleased with their two days' run of about one hundred miles.

Rational Dress.

The Rational Dress Society of London, Eng., has offered a premium of £50 for a style of dress for women which will best accord with the following requirements: Freedom of movement; absence of pressure over any part of the body; no more weight than is necessary for warmth, and weight and warmth evenly distributed; beauty and grace combined with comfort and convenience; not departing too conspicuously from woman's ordinary dress. It also offers prizes for tricycling and other ladies' sporting costumes. Mrs. E. M. King, the secretary of the society, a tricyclienne, in a letter to the *B. T. C. Gazette*, says:

"I send leaflets of the R. D. S. The dress, however, that I have devised—from practical experience—for tricycling is not the same as that described. I will explain as far as I can, and you can insert as much as you think fit of my explanation in your next issue. It will save me a great deal of trouble, as people seem always to expect that I will give them a 'full explanation' rather than they would pay 3 shillings for the pattern. The trousers are something between knickerbockers and riding trousers combined. The 'divided skirt' I found of no use—it kept riding up—then I tried riding trousers strapped under the boot, but they did not allow enough play at the knees. Knickerbockers made very loose to below the knees, and from there like riding trousers, and either kilted or braided, I found suitable and comfortable in every way, and I don't think the £10 prize will bring out anything better. For the top skirt—straight cut and narrow (without gores), with a small quantity of drapery behind, as long or as short as the wearer may desire, and braided according to taste; but the shorter the better. The jacket body to fit to the figure about as tight as a man's bicycling jacket, but not so tight as to necessitate corsets underneath. The top skirt is kept from blowing aside by a piece of elastic, which when seated is passed between the legs, so as to hold together the back and front part of the top skirt, this I also found to answer splendidly, and to do away with the necessity of the foolish plan of weighting the skirt, which I find so many ladies are taking to."—*Bicycle World*.

The two-mile bicycle race in connection with the New York Seventh Regiment games, November 25, was won by J. I. Stearns, Jr., in 6:41; F. C. Thomas second. The other starters were F. E. Davidson and Mr. Booth. Davidson, who had been in careful training for the race, went off in the lead, closely followed by Stearns, and the pair soon left the others some distance behind, but on the second lap Davidson slipped and fell at a turn, breaking a pedal so that he could not continue. This left Stearns an easy task to win. The track measured nine laps to the mile, and was chalked upon the board floor. Fully four thousand ladies and gentlemen were present, and great interest was evinced in all the games.

The meet at Washington, D. C., was not as great a success as was hoped for, partly because many preferred to spend Thanksgiving day at home, partly because of greater attractions elsewhere and partly on account of the weather, which was cold and disagreeable, with some two inches of snow upon the ground. About two hundred riders put in an appearance, however, and the programme was carried out in good style, except the racing, which was postponed until next May, when more suitable weather is expected.

An Oakland rider who has been spending some days in Redwood City reports the roads in every direction from that place to be in excellent condition, hard and smooth. Riding from that place to San Jose, he returned to Oakland by the roads upon the eastern side of the bay, making the distance, forty five miles, between the hours of ten a. m. and three p. m. including stops. With the pleasant weather and cold bracing air of these winter months there is no finer riding season during the whole year.

Many of the English bicycle makers are extending the size of their workshops and improving their facilities for an anticipated increase of business in the spring. One firm recently received in one day export orders from three different customers for an aggregate of two hundred machines.

John Keen, formerly the English professional champion, is expected in this country shortly, and will ride one or more races against Prince while here.

HERD AND SWINE.

Improvements in Dairying.

The developments of civilization are spread over the civilized world with an even hand. Improvements in the arts and sciences do not accumulate exclusively in any single locality; they distribute themselves over the reading portion of the globe, with almost the readiness and equality with which water finds its level. No sooner is any important discovery or advancement made, than the press picks it up, and with the never-tiring wings of steam, spreads it out before all the nations of the globe, whose eagle-eyed intellects are trained by study and experience to snatch, from the flitting streams of passing intelligence, whatever may serve to enlighten, profit, or please. What is thus plucked from the hastily circulating current of news is scanned, weighed, and measured, and perhaps utilized by a thousand persons at the same moment.

In this equalizing tendency of the expanding novelties of the world, the dairy interest is enjoying its full share. It is interesting to look over the dairy interest of the world, and note the progress of the last score of years. A quarter of a century ago, the system of associated dairying sprang into existence in this country as if by magic. Association brought dairymen in contact with each other, and a comparison of views and study and investigation followed. The legitimate sequel to all this was improved goods, cheaper production, and larger profit. This, in turn, led to expansion in production.

An art which had been confined to a few contracted nooks and corners spread, at once, over the face of the nation with almost the velocity of news by telegraph. Improved qualities brought increased consumption and increased demand, and from this was developed a new branch of commerce, that leaped from oblivion into an importance second only to that of the food-producing cereals.

The Canadians, allied to us by contiguity and consanguinity, were at the same time stirred into activity, and built up a new industry contemporary with our own.

England and Continental Europe have also been moved to the adoption of our improved process, and to increased production and consumption. The agricultural journals of Europe have teemed with our dairy literature, and thousands of the yeomanry have read and studied and profited. The impulse given to the dairy interest of the world has not been stopped by the bounds of the continents. It has stretched out to the islands of the sea. Australia has a large and well-developed dairy industry, built up since our associated system became known, and modeled after it. They have our cheese factories and creameries. They have, also, our modes of teaching the art by organized associations, conventions, and discussions, and public reports; and the business has grown to large dimensions, and become a grand success. The far-off island of New Zealand, even, is also now rejoicing with a prosperous dairy department in her agriculture, that is furnishing her people in abundance with the choicest luxuries wrought from milk. No branch of farming is said to be more successful on the island than that of the dairy.

While we have thus been shedding light and influence upon the outside world, we have been absorbing from it in return. European practices, whether recent or hoary with age, have been freely quoted and studied by our dairymen, and from them we have gathered much that has proved useful, and worthy of adoption.

Thus do dairymen share, equally with men of other callings, in the radiation and reflection of light and intelligence, to and fro, from man to man, and from nation to nation. The advancements in the dairy have been based on increased knowledge. Progressive dairymen have stepped outside the beaten track of routine and empiricism into the open channels of light and reason, and in these they must continue. The milk industry has, as yet, barely entered the field of progress. When we look back at the ground we have traveled over, it seems considerable; but when we look forward, and survey the immensity before us, the distance we have made seems as nothing. We believe there is a brilliant future open to dairymen who pursue their calling intelligently. The motto to be kept in view is, "Better goods at less cost." With this for his guiding star, he may push his way on with a speed measured by the light of his knowledge. Traditional rules have controlled in the past, but knowledge must control in the future. He who falls back on tradition will inevitably fall behind in the race. One might as well chase a steam engine with a donkey as to think of keeping up and prospering in a competition with those who avail themselves of the improvements developing for their benefit. With intelligence in command on the dairy farm, and persevering energy to do the pushing, there is no good reason for doubting that dairymen, in the future, may be much more prosperous than those of the past, or of to-day.—*National Live Stock Journal.*

The Ramsaur Bros. of Florence sold ear-loads of live hogs, within or about the year 1879, at the rate of \$150 per car-load of 10,000 pounds. The same weight of porkers would to-day bring \$650. Now, every stockgrower knows that hogs cannot be produced at \$15 per 1,000 pounds, or \$150 per car-load, without serious loss. However, the Ramsaur Bros. went on raising hogs upon a large scale, with implicit faith in coming remunerative prices. The reward of perseverance is now theirs. There arises here a practical lesson to those who shift and shift again with the shifting times. The shifter's bucket is apt to be bottom upwards when it does rain.—*Los Angeles Herald.*

Whatever stock is kept on the farm, the aim should be to constantly improve it as to its products. Common butter at the market price never pays. Gilt edged butter always is in demand and at remunerative prices. The extra pound or two of wool to the fleece, and a few more cents a pound, which 'Farmer Thrifty' gets above what 'Farmer Slack' receives, make all the difference between profit and loss in production. A well bred and fed steer that is ready for the butcher when thirty months old pays a fine profit, while the scrub sells at a loss and is not in condition, or so large, at three and a half and four years old.—*Wallo F. Brown.*

A recent visit to the dairy farm of Mr. Walker, on Van Cycle's Island, in Snisn bay, disclosed it to be one of the finest and best arranged in the State. Mr. Walker milks on an average seventy-five cows daily, turning out 300 pounds of gilt-edge butter per week, which is delivered twice a week in San Francisco. He has a hard-finished dairy-house, with every convenience. The churn is run by horse-power. Hogs and chickens are fed with the whey and curd. The stock raised is of a fine breed, and the natural increase in it alone yields a fine revenue. The islands of the Sacramento and San Joaquin delta, when fully reclaimed, will, without doubt, become the location of the finest dairies in the State.—*Napa Register.*

SHORTHORNS AND HEREFORDS.

Facts and Figures Developed by the Chicago Fat Stock Show.

The following table shows the weight, percentage of waste, etc., as well as the breed, of the animals, entered for the premiums for dressed carcasses at the Chicago fat stock show:

Name of Steer.	Breed.	DRESSED CARCASSES—STEER THREE AND UNDER FOUR YEARS.									
		Weight at home.	Live Weight at slaughter.	Weight dressed carcass.	Per cent. net carcass to gross or live weight.	Weight carcass—Hide and tallow.	Per cent. profitable weight carcass, Hide and tallow to gross or live weight.	Tallow.	Hide.	Left fore quarter.	Right fore quarter.

The following particulars regarding cost of productions taken from the report of the Awarding Committee, will be found of interest:

Steer, or spayed heifer, 3 and under 4 years—First premium, H. & J. Groff, on grade Shorthorn steer Canadian Champion, weighing 2,400 pounds; total cost of production, \$206 70, or 8.61 cents per pound. Second premium, H. & J. Groff, on Shorthorn steer King of the West, weighing 2,335 pounds; total cost of production \$203 33, or 8.92 cents per pound.

Steer, or spayed heifer, 2 and under 3 years—First premium, Leo B. Walsh, on grade Shorthorn steer Jim Blaine, weighing 1,825 pounds; total cost of production \$82 96 or 4.54 cents per pound. Second premium, H. Norris & Son, on grade Hereford steer Jay, weighing 1,735 pounds; total cost of production, \$111 97, or 6.42 cents per pound.

Steer, or spayed heifer, 1 and under 2 years—First premium, G. S. Burleigh, on grade Hereford heifer (spayed) Hattie, weighing 1,300 pounds; total cost of production \$23 22 or 2.80 cents per pound. Second premium, Cobb & Phillips, on Shorthorn steer Cassius 5th, weighing 1,140 pounds; total cost of production \$40 53, or 3.58 cents per pound.

The statements give some interesting data of feeding experiments, where the exhibitor evidently had in view the most rapid growth of the animal, rather than economical production. Had the latter been the chief object sought, less expensive kinds of feed would, in certain cases, have been used. The committee present the following tables, showing the comparative cost, year by year, of each animal entered. In order to make the yearly statement complete, the value of the animals at the commencement of each year is included, and based upon the actual weight certified by the exhibitor at a fixed value—6 cents—per pound, live weight:

FROM BIRTH TO 12 MONTHS OF AGE.

Names of Animals.	Total cost first 12 months	Weight at 12 months of age.	Value at 12 months, 6 cents per pound.	Cost per lb. up to 12 months.
Jay	\$31 30	800	\$48 00	\$5 91
Experiment	33 50	710	42 60	4 72
Young Aberdeen	34 67	1000	60 00	3 47
King of the West	34 67	1000	60 00	3 47
Cassius 4th	31 47	1000	60 00	3 15
Cassius 5th	38 15	1090	65 40	3 50
Hattie	19 75	700	42 00	2 08
Jim Blaine	27 51	950	57 00	2 89
Canadian Champion	33 67	1000	60 00	3 37

FROM 12 TO 24 MONTHS OF AGE.

Names of Animals.	Weight at 12 months of age.	Value at 12 months, 6 cents per pound.	Total cost 12 to 24 months.	Weight at 24 months of age.	Value at 24 months, 6 cents per pound.
Jim Blaine	800	\$48 00	\$37 50	1390	\$83 40
Jay	800	48 00	30 31	1370	82 20
Young Aberdeen	1000	60 00	52 12	1600	96 00
King of the West	1000	60 00	52 12	1600	96 00
Canadian Champion	1000	60 00	52 12	1600	96 00

FROM 24 TO 36 MONTHS OF AGE.

Names of Animals.	Weight at 24 months of age.	Value at 24 months, 6 cents per pound.	Total cost 24 to 36 months.	Weight at 36 months of age.	Value at 36 months, 6 cents per pound.
Canadian Champion	1600	\$96 00	\$81 50	2250	\$135 00
King of the West	1600	96 00	81 50	2250	135 00

The price of each article of food was determined upon an equitable and uniform basis to all the competitors, and upon

this standard the cost of the several commodities mentioned in the statements presented by exhibitors was calculated. The premiums were awarded as follows:

In the yearling ring, the animal produced at the least cost per pound was the lightest animal competing, and would not bring as much per pound in the market as the second-premium steer; and if the present market value had been considered, the awards would have been reversed. It will be seen in the accompanying statements, that the value of a calf at birth, pastured for each year, as well as expense for care, are the same in each case, which leaves the amount of other kinds of food consumed to determine the question of cost of production. As all the animals entered for competition were either pure bred or high grade, the amount of improved blood possessed by each would not give material advantage to any exhibitor.

As the facts are given under oath, the greatest care having been taken to secure absolute accuracy, they are of special value to all stockgrowers. Such exhibitions as the one in question, in connection with the periodical publications devoted to stockgrowing, are of more value, in the way of promoting the most desirable system and determining the most desirable breeds, than will at the first glance be realized, and we trust the time is not far distant when the agricultural fairs of this state will be productive of grand results—results, which are, indeed, already foreshadowed by what has been accomplished in a small way.

Breeding for Desirable Points.

Breeders are often disappointed that the young things in the herd do not show an advancing tendency, as the idea holds with many that it is the province of improved breeds to move forward, rather than to stand still, gaining upon their best points and overcoming defects, from year to year. The common, familiar expression, through which we are told that animals will produce progeny like themselves, can only be depended upon to a degree. The tendency among domestic animals to vary is greater than the tendency to hold strictly to a uniform type, simply because all of our improved breeds are what the term implies, "improved," this having been done by more or less careful selection from a lot of individuals, none of which were up to our present standards. For this reason, the utmost vigilance and the highest judgment are necessary, if we would continue to gain upon the less perfect forms we have left behind us.

The law which transmits eccentricities or defects also governs the transmission of points of excellence; and as we have many examples illustrating the former, we will give a few of them, the better to show how persistent the tendency is in animals and persons to transmit marks and features to their progeny. Col. Hallam, in 1833, described a race of two-legged pigs, the hind legs being entirely wanting. He personally had knowledge of this defect going through three generations. Nathusius describes a race of cattle on the Plata called Niatas. The forehead is very short and broad. The nasal portion of the face is short and upturned, thus leaving the lower jaw, which also curves upwards, projecting below the upper. This singular breed, undoubtedly, originated from a sport, so strongly marked as to be able to transmit this peculiarity so deeply that its propagation was continued, thus forming a breed having this ill-shaped head quite regularly planted upon the progeny, as by breeding a Niata bull to a Niata female, a Niata calf would be invariably produced. This breed originated after cattle were introduced into the country from Spain, in 1552, and it is supposed to have sprung up in the hands of the Indians south of the Plata.

Mention is made by Azara of a breed which originated in South America, to which the name of Chivos was given, on account of their having straight, vertical horns. They are reported as breeding true, and, so far as known, they arose from a sport. So, likewise, is mention made by the same author of a breed in Corientes, having very short legs. These also must have originated from a sport, a fixed breed resulting. Hornless cattle had a foothold in South America long since, and quite generally produced offspring without horns. Thus, through variation—departure from a given form—we have most singular breeds, and a great many of these, all having sprung from two or three parent stocks. One author alone makes reference to over fifty European breeds. These, of course, are mere offshoots, the results of variation, not planned and ordered, but accidental proofs of the tendency in varieties to multiply.

It is this tendency to part with one peculiarity of form, taking on another, that gives the breeder such latitude for the practice of his art; and he who learns to seize upon the advantages so offered, turning them to good account, generally proves himself an expert in his line. Peculiarities in the forms of cattle become localized, and as stated by Youatt, each locality becomes prejudiced in favor of whatever form may, through accident, have become most common. It is a very common occurrence for men to become impressed with the idea that the cows in their yards, though really of inferior grade, are better than any others within their knowledge. The same fact holds good with regard to horses long used upon the farm. In these cases every man has his own local standard. It is quite likely to be a very ordinary one, like the standard in most neighborhoods for constructing roads and bridges. Yet, in the absence of any knowledge of a better, prejudice in favor of the low type becomes very firmly fixed. Hence we see farmers and farmers' sons taking stock, of the kinds referred to, to the fairs, and they think themselves greatly wronged in not receiving awards.

The improvement of the breeds has, with men who read and observe, done away with local prejudices and attachments, and with these, improving animal forms is understood to be upon as fixed a plan as any which governs changes in form and points of convenience of farm machinery and mechanical appliances. The same influence which, now and then, greatly changes the horn, may work marked modifications in other parts. Where these modifications amount to a betterment, they should be seized upon and used. The disappearance or modification of a defect, or a gain, be it ever so slight, in a desirable feature, is not to be lightly estimated, because only in this way are improvements wrought, and made lasting by being perpetuated.

It is within the power of any man, if he has an especial fancy for a given feature in his herd, be this a short leg, a light horn, a full bosom, a wide, level top, or other thing deemed desirable to have, to select from herds, here and there, animals having the coveted feature, breeding from both male and female of like shape, persistently, and fix any feature or combination indelibly upon his herd. We once visited a herd made up by selections at sales, and counted twelve cows, standing in a row, ranging from four to seven years old, that did not vary more than three inches in height, and were almost identical in general make-up and contour. Now, with cows so selected, and bred to a bull having like characteristics deeply implanted within him, there is nothing surer than that a fixed type can, in a few years, be established in any herd.—*National Live Stock Journal.*

Marketing Butter.

Colman's Rural World says: We often see quoted very high prices for the gilt-edged butter from the Jersey, York, Pennsylvania and other farms, ranging from fifty cents to over \$1 per pound; and whilst we are anxious that our Western farmers and dairymen shall make the best and get the highest prices, we are at the same time aware of the fact that the difference between the two extremes, i. e., the price there and the price realized by some of our farmers, is not all profit. The happy medium, that is, a good quality of table butter that will sell to ordinary mortals the year round readily at from twenty-five to thirty-five cents per pound, and keep good for a reasonable length of time, is in our opinion the article out of which the most profit is, under favorable circumstances, made. The following from Henry Stewart in the *Rural New Yorker* is an illustration of this fact:

Let us consider what a gilt-edge dairyman did for his customers who paid him last winter from fifty to sixty-five cents per pound for his butter. The cows, in the first place, are all pure-bred and worth from \$150 to \$300 each, although this is well repaid by an average yield of ten pounds of butter in the week from each. In the second place, to secure the desired quality of the product the cows are fed and watered on the best of hay and feed and pure water from a spring, curried and brushed as well as a high-mettled racer is, and are bedded in clean sawdust frequently renewed. The udders are washed and wiped with a clean towel, and so are the milkers' hands. The stable is kept clean and well swept, so that no dust can get into the milk, and the milk, as it comes from the barn to the dairy, although quite free from specks of dust and hair, is strained twice before it is set away. It is set in a milk-house or milk-room, where the temperature is kept even by a stove in the winter and ice in the summer, and no expense or labor is spared to keep all these arrangements precisely the same through all the changes of the weather. The cream is churned and the butter is managed with every care by the hands of the proprietor himself; or if by hired help the skilled labor required is highly paid for. The butter is packed in small boxes or pails that cost from three to five cents per pound of butter, or it is moulded in a press into cakes which are wrapped in paraffine paper and then packed in a neat box at a cost of at least five cents a pound. And, lastly, it is sent to the customers at a cost of five cents a pound more for express charges.

To find a desirable market is not always easy. Location is of great importance in this respect, and the near-by dairyman can very well afford to farm land worth \$200 an acre on account of enjoying the best markets in the country and looking after them himself. It is a great advantage to have one's butter in the hands of the customer within three hours of the time it is shipped. Distant dairymen must necessarily depend upon commission agents.

The remark is sometimes made that new varieties of flowers and fruits are frequently originated and introduced in order to make trade, and keep the florists' and nurserymen's business good, as new styles of dress are established for the benefit of the milliner, dressmaker, and the tailor. But a little thought will satisfy anyone that very few plants are or can be put into the trade merely for this purpose. If it should once be learned that a horticulturist had foisted upon the public a plant of inferior value merely for the trade it might afford him, he would be so deserted by his customers, and by his professional brethren, as to lose many times what he might possibly have first gained by the operation. These men are not so reckless of their reputations; on the contrary, they are, as a rule, very jealous of them, knowing that their ultimate success depends very greatly upon their veracity. There are exceptions, but the exceptions belong to the fag-end of the business, and have comparatively little influence. When I find a man who honestly thinks that new breeds should not be encouraged because there are plenty of breeds already established, which possess such diversity of qualities that they may fill any necessary demand, I honor his opinion, although I think he is behind the times. But when I see anyone trying to put down new breeds because somebody is making "money" out of them, I see only jealousy, and I suggest, as a cure, that they drop the old breeds, which are good enough in their places, but behind the times, and nobody wants them, and take up the new breeds; give them honest attention a few years and make a little money out of them. The popular feeling is for the new breeds, and there are not enough men in this country who breed the old and established breeds and varieties to put it down.—*Exchange*.

We have done much in two or three years past to improve the number and quality of our dairies, but we have not increased them in any proportion to the demand. We consider at this day with the market we enjoy that butter-making is the best business a man or company can enter upon. Green feed can be procured for about the entire year, and for the brief time that green grass may be short root crops are always to be had in any required abundance. And the market is simply enormous, and so largely above our supply as to astonish those who are familiar with the facts. The money paid here for butter is equal to a steady stream of gold. We are cognizant of many facts which if aggregated would surprise our people. It is an old saying that "bread is the staff of life," and it is equally true that butter is its close companion, and it, being so, is at all times in demand by all, the blessed poor as well as the miserable rich. So those who desire a permanent, profitable business should bend their energies and invest their capital in butter-making in Los Angeles county.—*Los Angeles Mirror*.

Texas fever urgently demands consideration at the hands of our authorities. The nature of the disease and the conditions under which it is propagated appear to be but imperfectly understood even by the veterinary profession. Dr. Salmon is patiently investigating it this season, and has promulgated some new and startling views concerning it. There ought to be a very thorough inquiry instituted; our very best men ought to be employed to co-operate with Dr. Salmon in his work. Hitherto but little has been done by men properly qualified to make original investigations in this field. All have been content to follow the track of Gamgee, and to accept his conclusions as final. Dr. Salmon is the first to contest any of Gamgee's theories of the disease. Let us have more light upon this strange affection that has been so fatal in various localities during the past season.—*Breeder's Gazette*.

To avoid the trouble of having dirty pigpens, a slat floor can be made and placed about two feet above the bottom of the pen. The slats can be made of scantlings, 2x4 inches, and set edgewise an inch apart. The manure, when sufficient has accumulated, can be cleaned out by raising this grating. The floor is kept dry by this grating and will not rot. There need not be any floor underneath; the manure will rest on the ground.

BULL BUTTER AND THE DAIRYMEN.

Oleomargarine's Financial Success Inevitably the Result of Fraud.

The meeting of the dairymen last week, and their organization into the State Dairymen's Association, was but the first move in a war that will be waged with bitterness between them and the manufacturers of imitation butter. This organization has been effected none too soon. The oleomargarine men have already secured a strong hold on the situation. Not only is a very large amount of imitation butter manufactured in this city and disposed of here, but great quantities are imported from the East. This great success, reported by the manufacturers themselves, can rest only upon fraud.

Oleomargarine finds its market only through fraud. The success of its manufacturers is the result of fraud. In fact it could not be marketed at all without fraud, and the manufacturers, when they assert that they desire this product to stand or fall on its merits, and that they desire all who buy it to know just what they are buying, are putting forth a false claim. They know that only by deception on a large scale could they achieve the financial success and find the ready market of which they boast, and they know that their careful stamping and labeling of the bull butter by its right name is a farce and does nothing to accomplish the object had in view when the oleomargarine law was passed. Of the thousands of pounds put upon the market, if they be traced to their final consumers, not one per cent. is consumed by parties who know that they are not eating the natural product of the cow. If such quantities are marketed there must be consumers in proportion. Yet where is the man, woman or child, in all this city, who consumes such quantities, who knows that he or she has eaten the bogus compound? The parties who consume it are imposed upon and led to believe that they are using the natural butter of the dairy. Then of what use are your boxes and labels and stamps? The spirit of the law is evaded, though the letter be complied with. We are assured that tons of the bogus compound are disposed of in this city, and there is no ground for questioning the assertion. Where does this bull butter go? What grocer sells it to housekeepers under its proper name? What restaurant admits to its patrons that it serves them oleomargarine? What hotel avows that it feeds this product to its customers? A resolution that butter-makers refuse to consign their product to any dealer who handled oleomargarine, when offered in the convention, was promptly met with the assertion that nearly all of the dealers were handling the bogus article. That the false butter is properly stamped and labeled when it leaves the factory we do not deny. But who can trace it farther? It is sold to half the keepers of hotels and restaurants in San Francisco and is served to their customers as the genuine article.

We do not object to any man's making any compound of grease and chemicals that he may choose to make. We do not object to any man's eating this compound if he likes it. We do not object to the Chinaman's feasting on a rat dinner or a nicely-cooked plate of roast dog. But we do object to having the chemically-compounded grease palmed off upon the guest at the hotel or the boarder at the restaurant as butter, or to having the rats and dogs disguised as sausages and fed to the customer who asks for sausage.

If every person who eats oleomargarine could know what he was eating the market for the product would be gone. It may be that the product of the factory is as good as much of the butter sold in our markets, but the great majority of people would prefer a poor quality of butter to a manufactured compound equal in quality, and if the fraud of serving oleomargarine for butter were stopped the profits of the manufacturers would vanish; the \$100,000 which has been invested in bull-butter machinery in San Francisco would prove a permanent investment and the sale of 450,000,000 pounds of bull-butter in eight years, now boastfully pointed to by the manufacturers, would not be duplicated in twenty years.

California produces good butter. Her best dairies cannot be eclipsed by any of the gilt-edge dairies of Vermont, New York, Pennsylvania or New Jersey. But her reputation for producing good butter is being damaged by the bull-butter competition. When a man finds the alleged butter in half the best restaurants in the city to be of an indifferent quality he naturally concludes that the majority of our dairymen are making an inferior article, and that the standard of dairy butter in this state is a low one. He does not know that he is judging our dairymen by a product of the San Francisco factory, and is doing them a great injustice. That there is poor butter made from cows in California we do not deny. There are incompetent, careless, slovenly and unintelligent men in every business. But the average quality of the product served as butter in San Francisco restaurants is no index of the average intelligence of our dairymen nor of the average product of the dairy in California.

Laws compelling manufacturer to stamp and label all the oleomargarine he makes will never avail. Those who buy of him know what they are buying without stamp or label. But no law can follow the manufactured article to the table and compel the waiter to stamp each piece served. The proposed law compelling restaurant, hotel and boarding-house keepers to post a conspicuous sign: "Oleomargarine sold here" if he serves any of the compound to his customers might avail but we venture the prediction that such a law will never pass our present Legislature. The influences which would oppose it are too powerful. Such a sign would drive away half the customers of any dining-room in this city in twenty-four hours. And it would result in the shutting down of the factory within a month. People can be converted, in the slow process of time, to the belief that oleomargarine is as good as ordinary butter, if such is the fact, but the conversion would be so slow that the manufacturers would have to look to the dim future for their profit. But the people can be humbugged into consuming and paying for the compound without any such slow process of waiting. Hence the oleomargarine business has been a success from the start.

There are two courses open to dairymen in combating this opposition. The first is to produce a quality of butter which no factory can imitate. This is possible. No advocate of the bull butter claims that it can equal the best quality of butter. The claim is only that it cannot be told from fair or ordinary butter. With good, healthy cows, fed on wholesome grasses and grains, drinking pure water, kept neat and housed in storms, and with the most improved system in the dairy house, a quality of butter can be produced which never goes begging for a market and which cannot be counterfeited by the manufactured article. We hope the presence of this artificial competitor will stimulate a greater percentage of the dairymen of California to the production of "gilt-edge" butter. And in the improvement of the system of dairying the establishment of creameries will probably take a conspicuous part. It has been demonstrated that the best quality of butter for the general market can be produced at the lowest cost per pound only where manufactured on a large scale. Occasionally a man may be found engaged in dairying who has the capital to conduct the business on a large scale. But the majority of buttermakers are not capitalists. The co-operative plan of making butter and cheese will meet their case, and will no doubt in time be as popular here as it is in the best dairying regions of the East.

Another means of warfare would be to ascertain to what grocery stores, restaurants, hotels and boarding-houses oleomargarine finds its devious way from the factory and to take such steps as would notify all customers of such places that oleomargarine can be had there. This would be legitimate and if the manufacturers of bull butter are sincere in their profession of a desire to let their product stand upon its merits they could not object to it. It would be simply aiding them in their professed endeavors to put their manufacture before the public under its true colors.

In this connection it may not be amiss to refer to the alleged interview with Wm. V. Gaffey, published last Sunday morning in one of the daily papers. Mr. Gaffey informs a reporter of the *BREEDER AND SPORTSMAN* that he is grossly misrepresented in that publication. That he was disappointed at the failure of the convention to adopt his resolution for full weight in butter, Mr. Gaffey is free to confess, and it is probable that the association will yet adopt such a regulation. But that he is a convert to oleomargarine in any such sense as one would infer from a reading of that alleged interview he emphatically denies. What he admits is this: That he was surprised when he witnessed the working of the factory and examined its product; that the latter is equal to common grades of butter in taste, smell and appearance, and that it is only the very best grades of butter that cannot be imitated by the compound. He believes that the manufacture of a higher average grade of butter by dairymen will result. But he is as strong as ever in the spirit which led him to make the first move which resulted in the formation of the Dairymen's Association, and as earnest in desiring strict legislation to put a stop to the perpetuation of the fraud by which so much of the bull butter is to-day able to find a market.

The Growing Demand for Meat.

It really seems that the increased prices upon meats have stimulated rather than retarded consumption. During the third week in October of the present year, the receipts of cattle at the Union Stock Yards of this city were larger than at any previous time since the yards were established. Yet, right at the time of these heavy receipts, and during the height of the scare among shippers and Eastern buyers growing out of the increasing shipments of dressed beef, we find, by referring to the market report for Oct. 28th, the week following the very heavy receipts referred to, at which time the receipts were again reported as very heavy, that "shippers bought with more than ordinary freedom, anything good enough for their use being taken at an advance on the prices of the day before." It was reported that no extra cattle were in the market, but that "sales above \$5 reached a larger aggregate than for any day recently." Sales at \$5 and better, on the 27th, exceeded 1,000 head, and some sales were made at \$6.50. Sixty head of Montana natives were sold for shipment, at \$5.75. We refer to these sales because they were made immediately after the unprecedentedly large receipts.

The fact is, that no producer needs fear becoming the owner of too many cattle, or other meat-producing animals, provided he is so situated as to give them proper care and maintain a profitable growth at all seasons. The very poorest of the poor—those who formerly seldom bought meats—now swarm about the retail shops and buy shank bones, rib tips, flank pieces and all, anything that will make a boil, a stew, or work into soup. The rapidly increasing population of our cities is made up very largely of the laborers and operators from foreign countries, a class of people who ate but very little meat in their own country, many of them none at all. Increased wages, with an advantage in the price of meats here, compared to that in their own country, prompts them to eat meat; and this class of consumers alone absorb an enormous amount of the lower grades of meat every day.

Under the various demands, graduated by taste and purse, the retail butchers are enabled to assort their cuts as the grocer assort his coffee, there being ready buyers for each grade—some cuts going as readily at 20 to 25 cents as others do at 7 or 8 cents. The canning of meats opens a market for such low grades of meat as hardly any butcher, no matter who his customers are, would tolerate upon his hooks. This trade being, as it is carried on, very profitable, enables cattle growers to close out unthrifty, thin animals; getting, in the absence of any fat, the full market value for skin, shrunken muscles, tendon, bone, and offal. The accumulation of this class of stock upon the farm affords a lesson that no observing farmer can fail to profit by, as he has had ample opportunity of seeing that he can no more grow good, profit-yielding meat upon the class of stock referred to, than a thrifty crop of corn upon a dry, sandy knoll.

If beef, to meet the demands of the lower grade of consumers and canners, could be produced at a cost in keeping with its selling value, then there would be some apology for growing it. The manufacturer makes a light article of cloth to meet the demand from a certain class of customers. He weaves into this fabric cheap material, makes it light, and sells by the yard, in place of selling by the pound. As a rule, he is supposed to make a higher relative profit upon the low-priced goods. But, unfortunately for the farmer, he has no low-priced material to weave in. The grass that will grow and fatten a steer at three cents, will, with greater rapidity, grow one at six cents; and what is true of grass is equally true of grain feed.—*Chicago Live Stock Journal*.

Wheat bran and oil-cake meal, combined in a proportion by weight of two of bran to one of meal, is an excellent feed for cows giving milk. A larger proportion of meal will too rapidly fatten the animals. If quantity of milk only is desired the proportion of bran may be increased.

ADVERTISING RATES.—Displayed \$1.50 per inch each insertion or pro rata for less space. Reading Notices set in brevier type and having no foot marks, 30 cents per line each insertion. Lines will average ten words. A discount of 10 per cent. will be allowed on 3 months, 20 per cent. on 6 months and 30 per cent. on 12 months contracts. No extra rate charged for cuts or cutting of column rules. No reading notice take for less than 60 cents each insertion.

San Francisco, Saturday, December 23, 1882.

Mr. M. J. Henley is a duly authorized traveling agent and correspondent for the "Breeder and Sportsman."

ARRAIGNED.

And now, Honorable James McMillan Shafter, we will present further illustrations to show that the great trotting and breeding interests of the Pacific Coast demand that you shall no longer fill the place you occupy in District Board No. 5. Although the course you have taken would warrant a return of personalities we shall refrain, as far as is possible, from bringing matters of a personal nature into the discussion.

That these cannot be entirely eliminated is unfortunate, and in order to show that you are unfitted for the place on other grounds than incompatibility it will be necessary to allude to circumstances, if even these should compromise your social standing. Further than this we have no desire to go, and though your attack would warrant a reply in the same strain, as has been stated before, we cannot surrender the position we occupy to meet scurrillity with vituperation. Therefore, we shall write dispassionately, although it will be necessary to use placid language and straightforward statements. Without taking the clauses of your article—which you may probably think are arguments—as they come we will commence with that one where you challenge us if we "know of any dishonorable conduct on my part of any kind, you are quite at liberty to state it." These are your words and we shall show that your conduct all through has been scarcely up to the standard which most men regard as honorable. All through your decisions and statements are errors which if you do not "know them to be untrue" you have not the acuteness you are generally credited with, and are far nearer imbecility than we can possibly imagine. There is no necessity for going over the arguments presented in previous articles, as we have yet to meet a man who does not agree with us in every point, excepting, of course, the member of District Board No. 5.

You falsely state that the conversation with you in regard to the judges was before we claimed to have any knowledge that Dawn would start. By reference to the article in this paper of November 25th you will see that the statement was that "we met him (Shafter) some little time before the race was called," and in the same article is this sentence: "Until we went to the track shortly after 12 m. and for some time after we were not aware that Dawn had put in an appearance." Furthermore it was explained that Antevolo was driven to the track only in time to be "warmed up;" after that on alighting from the sulky we learned of Dawn being there, and as soon as the conversation was ended, and Mr. Howe consented to act, the horses were called up.

The "convict" in this case is the "member." As to Mr. Whitney's disagreement with the ruling in the three-year-old the Clerk of the Course, Captain Ben E. Harris, so stated in the presence of A. L. Hinds and others, and we have not the least doubt of the correctness of Captain Harris' statement if it is denied by this man who is so liberal in his accusations of falsehood. In regard to your statement "You wished to pay ten dollars, and as it seemed to please you to do so the President took your money; but the decision of the Board was there was no appeal, and that it proceeded by original jurisdiction" is also false, whether "known to be untrue" by you or not. The President made a demand for the money which we got of Mr. Hinds and gave him a check on an Oakland Bank for it, and afterwards Captain Smith spoke of his oversight in not requiring Mr. Whitney to pay the \$20, incurred by his recorded protests or appeals

in the case of Antevolo and Sister to Honesty. As the Board granted an adjournment on the plea of Mr. Whitney that he desired to obtain affidavits to sustain these appeals or protests, and fixed the following Monday to hear the evidence, it is difficult to conceive on what grounds the denial of the appeal is based. At all events the fee was demanded from us and paid as the Chairman of the Board will verify.

Again there is no truth in the implication that we were not ready to make good the stakes in the yearling and three-year-old. We proffered them to Mr. Whitney, the treasurer, before the race was called, and he requested us to retain them until it was concluded.

There is no necessity to take up space in proving that every statement we made was true. As we shall show hereafter that Mr. Shafter is a "betting man," we proffer him the wagers of \$100 on each statement made by us being true, and the same amount that each of his in denial is false. It is not claimed that there is any logic in a proffered bet. All that it does prove is the sincerity of the party making it, and that he has confidence in the ground he takes.

A typographical error, which made "members" of "member," was not likely to mislead anyone, as it is well known that at the time the "board" consisted of Captain Smith and Mr. Shafter.

And now we will "hark back" to cover ground that comes appropriately into the discussion, and although we do not take it upon us to say authoritatively whether your conduct was "dishonorable" or not, it cannot be held otherwise than prejudicial to the elevation of the sports of the turf. You owned a horse, and probably still own him, Haddington. Your trainer took him to the half-mile track, and there entered into a match race, to be run on Sunday. Although in the advertisement the name of your trainer appeared as the person making the match, you sanctioned it with your presence, and the money put up was claimed to be yours. At least, when the money was returned, it went into your hands. There was a squabble at the time of the race, and afterwards, there were charges brought before the Pacific Coast Blood-Horse Association growing out of it.

It was proved to have been a disgraceful affair. The trainer was punished with the utmost severity, he being the scapegoat to carry the burden of the sin. We do not think that you will have the effrontery to stigmatize this brief statement as "known to be untrue." We also think that you will for once agree with us that straightforward racing on Sunday is not the way to popularize the turf in this country. Even if we call a decent observance of the Sabbath day bigoted prejudice, some respect must be paid to the prejudices of the people from whom we expect the support that will warrant the expense of breeding, rearing and training race-horses.

Occurrences like those which were a part of and followed this Sunday race on the half-mile track, and which was won by your horse Haddington, run in your presence, and in which you did nothing in the way of exercising your prerogative of ownership by forbidding the man in your employ to run your horse, are surely detrimental to the interest depending, and cannot be defended from any point of view.

Such conduct, although restricted in your case to the part indicated by the above statement, does not fit a man to be a member of a board for the government of the sports of the turf and track.

It may not interfere with candidacy on a platform that calls for a rigid observance of the first day of the week, and that denounces "recreation" on that day as something which the Legislature must stop at all hazards. As to that phase of the question we leave it for conventions to determine, and the voters to pass upon; but when it has a bearing on the interests we are pledged to do the best in our power to protect, it comes within the legitimate sphere of this paper. Then we must add to the previous arraignment of J. McM. Shafter another count. By itself we would not consider it sufficient, as there may have been repentance that should lead to pardon. Still it adds weight to the other charges, and until proper penance is done there cannot be absolution.

Holiness and temperance are cardinal virtues, and we have the greatest respect for a man whose life is governed by the maxims inculcated in the Good Book. More than that, we are not particular where the controlling influence comes from so long as the actions are in accordance with the "Golden Rule." But when the example set is widely at variance with the precepts there is room for doubt of the governing motive and in place of offering advice to benefit the party, the whole aim is to indulge a malignant disposition. Notwithstanding that is the evident intention of the temperance hourly of Mr. Shafter it is beyond dispute well worthy of attention, and if even the preacher takes his share of Bourbon, and boasts of the number of glasses of wine he has drunk at a banquet, the good sense of the admonition is apparent. Then again it may be a dreamy recollection of campaign speeches made in the prohibition fight, and

a remembrance that forces itself into places that are hardly appropriate.

There must be a general multiplication of vision regarding the propriety of Mr. Shafter filling a place in the judges' stand, or in the Board, and in lieu of the "seeing double" being confined to us there is a general optical delusion accompanied with a determination to be governed by the image on the brain. When you were President of the State Agricultural Society the directors appointed a committee to occupy the stand and judge the race, leaving you out. You were indignant at the action; although it was represented that the President might be better employed in other duties, you could not be mollified, and by the threat of resignation compelled them to permit your occupancy of the stand. At the late meeting of the Pacific Coast Blood Horse Association it was difficult to induce other members to share the stand with you, and on the first day you grossly insulted the gentlemen who differed with you in opinion although they were clearly in the right, and from that time measures were taken to exclude you. So general is the dissatisfaction that we have heard a large majority of those interested declare that they would not start a horse in a race, regardless of the consequences, if you were a judge.

Although it may be in the power of a judge of a "civil court" to send a person who is obnoxious "to jail," there are few now wearing the ermine who give cause for language which is in contempt.

In the days of Lord Jeffreys it was different. The wig and gown were thought to be a warrant for usurping the place of attorney and prosecutor, and trampling upon the rights of those whom they wished to crush. We must say, sir, that you show a good deal of the same temperament. That you would like to cow into submission all those who oppose you is evident. That your cherished arguments are a abuse and dictatorial assumption of extra knowledge is apparent. That you have made a mistake in supposing that we can be frightened from pursuing the course which it is our manifest duty to follow you are liable to discover, and that wealth and "station" will not be accepted as an excuse for wrongdoing so far as we are concerned.

A MERRY CHRISTMAS.

The *Breeder and Sportsman* send a hearty, cordial greeting to all.

Health, happiness, good cheer, above all contentment. Not that kind of contentment supinely accepting whatever the conditions, but rather the complacency arising from knowing that our duties have been tolerably well performed, and a determination to do still better in the future. There is much to be thankful for in the land, and the contrast between this and the countries whose Christmas has brought its annual round of festivities for centuries is so great that we are prone to underrate the advantages.

There is an extra pleasure when yule-time can be enjoyed among flowers and green fields, and though there is no necessity for the roaring fires, the heavy wrappings and the fur robes, the merriment is just as heartily appreciated.

We saw an appropriate device of Christmas in California, barring the incongruity of the ice-covered lakelet. A fair damsel, probably intended for Venus, gracefully gliding over the smooth surface, her only habiliment being a veil of gauze of the most shadowy texture. The skates were of the latest pattern, and an accompanying Cupid, in just as flimsy attire, skimming along an open length or two in advance.

That the air of Christmas day may be "soft and balmy" enough for the comfort of the Queen (who from all accounts had a surplus of hot blood) is very likely though the ice will have to be made with the aid of the refrigerating machine which is the only thing here to afford the necessary congelation.

Notwithstanding the springtime weather of a California Christmas, there will be pleasant thoughts of those which have been spent in days long gone. There will be remembrances, joyous and sad, and heart yearnings for the old friends who are so far away. There are many breaks in the circle which surrounds the family Christmas tree, "back home," gaps that are measured by the width of the silent river, and the shadowy banks on the far-off side.

These are the occasion of solemn recollections, though the more tangible interval, bounded by the Atlantic and Pacific, is not insurmountable and there are few who do not cherish the expectation of spending succeeding Christmases in the land of their birth.

To the many good friends in the whole country from ocean to ocean, to those who are still far away, we send our sincerest wishes for their welfare, and that one and all of our readers may spend a merry Christmas, and a succession of them until they are ready to have the "silver bowl broken," is our heartfelt desire.

A SHORT VISIT TO SACRAMENTO.

Last Saturday we boarded the 8 a. m. train at 16th street, Oakland, and shortly after high twelve were doing full justice to a lunch at the Golden Eagle. The post-lunch-time cigar was still afire when the course was reached, and soon after the two-year-old Lady Viva, and the yearling, Sir Thad, were ready for a trial. It was the first time we ever saw them saddled. Both were broken to harness before being sent to Sacramento, though it was late in September when they were sent to join Mr. Winter's "string." Both had a relapse of the pinkeye, the filly being more severely affected than the colt. She went off her feed, and had to be thrown out of training soon after she was broken to ride. The trials were satisfactory; more than that, as expectations were greatly exceeded. These are the first thoroughbreds we have bred in California, and are both from our old favorite, Lady Amanda. The filly is by Three Cheers, and though the colt has to be recorded as by Norfolk or Thad Stevens, there is no question of the latter being the sire. We must also acknowledge that successful as we have been in breeding a couple of trotting colts, there is a higher degree of pleasure attending the rearing of those of a blood which is more in the purple, albeit the dollars predominate on the plebian side. Race-horses are luxuries, something like a fine picture gallery, a yacht, or a "palatial" residence. A "poor cuss" may indulge in a "bit of blood" when the others are far beyond his reach, and it may be that he can make the trotting-bred help buy the oats for their aristocratic connections.

After the runs we accompanied Mr. Winters to his breeding farm, about five miles from Sacramento. All that we can say at the present time is that when the improvements are finished it will be one of the model farms of the State. The location could scarcely be improved, and, in fact, for natural advantages it is hard to equal. Hereafter we will give a full description of it, so there is little necessity for remark now.

The stock could not look better. There is an abundance of green feed, which lasts through the whole season, and the lack of this was the great drawback at El Arroyo. The benefits are more apparent in the weanlings than the older horses, though all look well. The weanlings are the best grown lot, taken together, we ever saw, and have the size and substance now that are usually seen when six months older.

THE OVERMAN-ROMERO TROT.

To say that there was dissatisfaction among those who witnessed the trot between Romero and Overman at the Bay District Course last Saturday, would be using mild language. There was that feeling among the regular attendants, and disgust in those who are not acquainted with the mishaps which horses are liable to. That the race was a poor return for the drive from the city is certain; that those who made the longer pilgrimage from Los Angeles, Red Bluff, Sacramento and other places more or less remote, were disgusted with the barren result of the journey is also probable.

There were great expectations of a grand race. Romero in all of his previous contests had shown a flight of speed of the first class; in his work there were indications that he was fully capable of covering a portion of the ground with his accustomed velocity. The papers were unanimous in brilliant prognostications, and the knights of the quill vied with each other in warm prophecies of a "great race." There were good grounds for the vaticination. Fast records closely together, drivers of established reputation, and up to the last moment there were rosy accounts of what the horses were doing.

The race was a complete fizzle; Overman could play with his antagonist and even a thirty gait was too fast at the outset for the grey to withstand. So far we have not heard a satisfactory reason for him making so poor a showing. There was an absence of his usual dash, and though in the last heat he made a better effort, the best was far behind the Romero of other days. We have no desire to offer excuses or to make charges. Not being present at the race we cannot give an opinion, founded on personal knowledge, and therefore refrain from criticism.

DOG DEALING.

Inadvertently last week credit was not given the *American Field* for an article under the above title which was copied in "The Kennel" department of this paper. We aim to be very exact in awarding credit whenever matter is copied, and it is somewhat mortifying to have to make the correction. The article is a very good one and a capital illustration of the old methods and the new. There is a large capital now invested in dogs, and not the least reason why they should not be regarded as property the same as horses and cattle.

MAMBRINO WILKES.

In the short history of Mambrino Wilkes we did not think that it was necessary to allude to the genuineness of the pedigree. It may be as well to state, however, that we have seen letters and certificates from Mr. Treacy which establish the correctness beyond a question. Some of these were written only a short time ago, and the identification and breeding are complete.

As it is stated, a history of the descendants of George Wilkes will be given ere long. By delaying it until after the close of the year, a great deal of labor is saved, as by that means the work of our Eastern contemporaries is utilized, and the collation, originally a work of magnitude, relieves us of the hardest kind of a job.

DR. PARDEE ON THE RIFLE.

Those who are not enthusiasts in rifle shooting can scarcely fail to be interested in the articles on "Ancient and Modern Arms," which Dr. E. H. Pardee is contributing to the *Breeder and Sportsman*. It is safe to assert that when the essays are completed it will be the best practical dissertation which has yet been published.

The illustrations recall an old gun which a man presented to us when a boy. The barrel was of brass and the bore was hexagonal, but without the "twist." It had a flint lock, and was evidently of ancient origin, more ancient than the time of Whitworth. We never tried it with a ball, and, boy-like, it was "traded" for a big horse pistol.

EQUINE DENTISTRY.

We call attention to the advertisement of Mr. Woodruff, as a practitioner in that line will be a great benefit to the horses of the Coast. Mr. Woodruff brings recommendations from men who are well posted, and the work he has done here has met the approbation of those who have employed him.

FISH.

Carp Breeding.

There are two carp ponds of small dimensions near Bakersfield, in each of which the plant was made last spring. The fish are doing well and there are to be seen great numbers of young fish. It cannot be long before this market will be well supplied with excellent fish. It would be well for every farmer who has half an acre of ground fitted for a pond, with a certain supply of water, to raise these fish for the household alone, as they raise fowls.

The *Foothill Tidings* tells of Rev. J. W. Brier, who is breeding carp some three miles from Grass Valley. He finds that 1,000 carp will live and grow finely upon what one hog will—in both cases from birth to two years old. At this age the carp would weigh 4,000 pounds, the average lot, while the average porker will weigh 250 pounds. At present prices for the two articles of food, the fish would bring \$1,000, the hog, \$24.

The *South Coast*, published at San Luis Obispo, says that a Mr. McLellan, a resident of that county, recently caught 300 carp at one haul of a seine, in a small lake in that county, where only a little over two years ago ten were planted. Owing to a rent that was in his seine he thinks he did not secure more than half that were in the net. The average weight of the 300 was about one pound.

A recent foreign correspondent says: "Prince Christian assured my father that at Schleswig-Holstein the carp lakes are periodically farmed by sowing the bottom with rye grass and some other cereal, by cutting it, and afterwards turning in the water and fish, to the manifest advantage of the latter."

The good influence of this procedure has been recognized by old Gervase Markham, who, when speaking under the heading "How to Make Carp Grow to an Extraordinary Bigness in a Pond," says: "Perceiving about the month of April that your pond begins to grow low in water, then, with an iron rake, rake off the sides of your pond where the water is falling away, then sow some hay seed and rake it well. By this means at the latter end of summer there will be a great growth of grass, which, when the winter comes, the pond being raised by rain to the top, will overflow all that grass. Then the carp, having water to carry them to the feed, will fill themselves, and, in a short time, become fat as the hogs that are kept for that purpose."

The difference between the directions of the old sportsman, and the German plan, as the readers will perceive, is very slight.—*Kern County Gazette*.

An Imp of a Fish.

On Friday a party of young people were spending the afternoon at Moore's Beach. The tide was unusually low at the time, and in one of the natural aquariums, left exposed by the receding waves, a lively little specimen of the great sea monster known as the "devil fish" was found sporting around in a hole in the rocks to the evident dismay of the customary occupants of that particular pool. When in repose the whole animal seemed not larger than an ordinary china saucer; with its eight long legs or feelers, coiled up in regular whorls (like bundles of tape) and drawn close in to its body; or else with one or more of these long, snake-like appendages left floating lazily about its body, ready to seize with their powerful suckers upon any unfortunate mite that came within their reach. The body itself of the little "devil" seemed quite insignificant compared to the length of its legs, which were each about a foot long. It was about the size and shape of a large hen's egg and quite resembled one of these when denuded of its hard outside shell. Its color was a pale flesh tint, except when the creature became excited, when it changed instantly to a deep blood red as it spied its prey, and darted across the pool in pursuit of it, with its long legs trailing through the water behind it. A gentleman of the party reached down into the water and grabbed hold of the little monster with the intention of bring-

ing it up for the closer inspection of the ladies, when its long pliant feelers attached themselves to his wrist by an innumerable set of small cup-shaped valves, which extended from its body to the extreme tip of each of these snake-like extensions. He was now more anxious to drop his prize than he had been to exhibit it, but the little cuss (this term is allowable applied to a devil fish) hung on until others of the party came to his assistance and pulled the tightly attached suckers from his arm. The prize was then deposited in a tin can for safe transport to Santa Cruz, where it is now preserved in alcohol as a souvenir of the day.—*Santa Cruz Courier-Item*.

Mountain Lakes Despoiled of Trout.

A *Reno Gazette* reporter is informed that immense quantities of trout are being ruthlessly destroyed at Mud and Pyramid lakes by Indians, Italians and Chinese, the latter controlling the Indians so that no fish can be sold unless a certain price is obtained, no matter how much fish may be on hand. The price is seven or eight cents per pound, and the vandals "stand pat" on this unless purchasers submit to their extortion. The reporter's informant said he saw several piles of fish at Mud lake last week, aggregating a ton at least, that were rotting on the ground, and he positively knew that the perpetrators of the outrage had been offered four cents per pound for the lot before the fish spoiled. Here is a good chance for the Tar Bucket Brigade to exercise their deviltry. It is probable that there is not an American citizen among the whole band of vandals, but they have a fat thing nevertheless on Uncle Sam's domain. Destroyers of timber are punished severely, but there seems to be no way of getting at these wretches who wantonly destroy precious food in order to compel purchasers to submit to their extortionate demands. Here in Reno at this time consumers have to pay fifteen cents per pound for Pyramid or Mud lake trout in order that these fish-destroyers may make money. It should not be so. A thunder clap or something else equally expressive should suddenly wean them from their destructive proclivities. A Reno dealer says he has to pay ten cents per pound for fish at Pyramid and one cent and a half freight. One hundred pounds of trout will lose twelve pounds in weight in one night after they are opened for sale, so that the dealer has not much of a chance to make large profits even at retailing them for fifteen cents. Another phase of the fishing business is this: Parties are known to go to certain places on the Truckee river, between Reno and Wadsworth, and in a few hours obtain a large quantity of trout, not by legitimate hook-and-line process, but by the use of explosives. It is probable that they bait a deep hole in an eddy and explode a cartridge of giant powder when the fish have collected in considerable numbers. Something should be done to stop this sort of work.—*Bee*.

THE ORCA OR WHALE-KILLER.—Captain Dan Farley, of the schooner "Fanny Gilmore," one of the oldest masters trading on this Coast, and who is said to have made more trips between this port and Santa Cruz than any other Captain, on one of his recent runs up saw a dead whale nearly seventy feet long floating in the water a few miles south of the Heads. About the body were twenty orcas or "killers," as they are called by whaling captains, actively engaged in feeding. Captain Farley, who many years ago pursued the leviathan in the Arctic and the Japanese Seas, says that what he saw of these rapacious fish overthrows the ideas heretofore existing regarding the manner in which they prey upon the whale. It has always been supposed that the orca kills the whale by biting it about the body, as it is provided with long sharp teeth in both jaws, similar to those of the shark. It has also a monstrous fin upon the back, but as it contains no bone and is made only of cartilage and oil, it cuts no figure as a means of defense or assault. Among the school of orcas that surrounded the dead whale mentioned by Captain Farley was one thirty feet long, with a fin extending above its head ten feet high. It was observed that they operated only at the whale's mouth, and that the tongue of the animal was their food. The lips of the whale had been cut away as if with an ax, the presumption being that the orcas attacked it and caused death by a loss of blood through the lips. Once dead and the tongue eaten the whale is left by its enemies, who go thrashing through the water in search of other game. Off Half Moon Bay these fish are found in great numbers, but they have not often been seen before feeding upon their prey.—*Examiner*.

Sweaborg, Que., has an enterprise of which very little, hitherto, has been known, namely, the fish culture. Mr. Wm. Thornton has on his farm three fish ponds, and the fourth is under construction. The ponds will cover about two acres, and are filled with spring water. Early in the spring 15,000 fry, speckled trout and California salmon, were placed in them. The fish are growing rapidly. It is the intention of the proprietor to increase the number of ponds to twelve or fifteen, and as there is abundance of good water, there is every prospect of making the venture a pecuniary success.

Haley and Masterson Again.

Last Thursday evening R. S. Haley, of the Olympic Club, and Jos Masterson, of the California Athletic and Lacrosse Club, signed an agreement to run 100 yards for a trophy (donated by C. M. Piercy of Recreation Park) costing \$100, the race to be run three weeks from to-day (Jan. 13th, 1883). National Association rules to govern the event. "In case of unfavorable weather, the race to be postponed until first good day and track, excepting Sunday. And either man failing to toe the mark between the hours set for race, shall pay \$75, to the other's trainer for his fees attending such labor." Mr. Piercy pledges himself to prepare a perfectly level 100-yard track, and furnish five reliable fifth-second watches for the event. The men are both determined to win, and it will be a grand race. We have the agreement in our possession, and know that they are both anxious to win.

The steamer California brought back to their Oregon home R. E. Bybee's red Irish setter Sandy and F. G. Abell's Gordon setter Scott, the latter being the winner of the California field trials. Mr. Abell's Bess and Auditor and Spencer's Gem remain at Gilroy in charge of Mr. E. Leavesley, the veteran trainer. The success of the Oregon dogs speaks volumes in favor of the ability, care and attention that Mr. Leavesley bestows upon the high-bred canines confided to his care. The dogs were in good order, notwithstanding a very rough ocean voyage. Jim Renwick, the racer, also arrived on the same steamer.—*Oregon Rural Press*.

The Howards of the O. C. have in contemplation material for a good A1 amateur nine next year. With the present nine they have succeeded in defeating the Redingtons and Olympics.

In selecting animals it should be borne in mind that those with small chests do not fatten readily.

THE KENNEL.

"Throw Physic to the Dogs."

One of the commonest troubles that beset young dog owners is the difficulty of giving medicine to their animals when they are taken sick. They try a dozen plans recommended by good-natured friends, but the result is nearly always the same; either the physic is spilt on the ground or over the operator's clothes, or else the dog, feeling that his stomach has been insulted, goes off into a corner and disgorges everything he has taken. A dog appears to have almost absolute control over his stomach, and needs no artificial emetic when he takes a notion to vomit, so it is always necessary to watch one for some time after the medicine has been administered. It is much easier and safer to fool a dog into taking physic than it is to force him into it. A pill is the easiest of all medicines to give a dog. The best plan is to coat the pill with silver paper to kill the smell, then wrap it up in a piece of meat. Throw the dog several pieces of plain meat, and when he bolts them, as most dogs will, throw him the piece containing the pill. It is a hundred to one that he will bolt it down and never know that he has been dosed. All powders, such as areca nut, iodide of potash and other drugs given in a granulated form, can be administered in this way without the slightest trouble. Some persons mix their dog powders up in butter, which they smear on the sick animal's nose for him to lick off. Others again put the powders between two slices of bread and butter, but the meat plan is the cleanest and easiest.

It sometimes is absolutely necessary to use a moderate degree of force in giving a dog medicine. In such cases it is best to lay the dog on his back or place his head between your legs, tightly gripping his neck with the knees if he attempts to back; or else force him to a sitting position between your knees, with his fore feet in the air and his back towards you. Then make him open his mouth by forcing the thumb and fingers between his grinders, where they can come to no harm from his most frantic attempts to bite. With the other hand place the powder as far back on the tongue as possible, and then close the mouth, holding it shut with the hand. He cannot eject the dry powders, and is forced to swallow them. Try the same plan in giving castor oil, holding the head well up when the dose is put in the mouth. The natural desire to relieve the mouth causes the motion of swallowing, though for the reason above stated care must be taken to see that the dog does not vomit before the medicine has had a chance to work.

In performing light surgical operations the dog should be muzzled. This can be done in the absence of a proper muzzle with a piece of wide tape tied around the nose and brought back behind the head.

An ointment or plaster must always be thoroughly covered with a bandage the dog cannot remove or he will be sure to lick it off.

A common cut or incised wound is best left to nature and the healing influence of the dog's tongue.

It often happens that in hunting, dogs, especially pointers, get a V shaped flap of skin torn which hangs with the point down. This needs to be sewn up. A glover's needle is the best to use, with waxed silk. Draw the silk through the two edges of the wound and tie it tighter, cutting off the ends so close to the skin that he cannot bite them. They can be cut out when the wound heals or if left to rot away will do no great harm.

It is not sportsman-like to cut a dog's ears, but when the job is done the cut should be made with a sharp pair of scissors always from the butt towards the point. A cap should then be put on to prevent the dog from shaking his head and if it is desired to have the ears stand erect, the points should be braced up with sticking-plaster until thoroughly healed.

Never bite a dog's tail. It is a cruel, beastly trick. If your setter has a habit of thumping the brush with his tail until it is sore take off two or three joints with a sharp knife or a heavy pair of shears. The old superstition about taking the sinew or worm out of a dog's tail to stop distemper is as idiotic as such superstitions usually are.

Do not get into the habit of giving your dog medicine for every trifling ailment. Rest, warmth and cleanliness are the best of all remedies and in most cases a change of diet will do more than a store full of drugs.

POINTERS AHEAD.—The champions of the setter should read the following from the *Turf, Field and Farm*: The result of the Eastern Field Trials has been a surprise to many of the wisecracks, not only from the fact that the crack dogs were in several instances beaten, but that the pointers carried off a large share of the honors. Croxteth won, in addition to the special pointer prize, second prize in the All-Aged Stake; while Mr. Luke White's little marvel, Lalla Rookh, divided third prize with Gladstone in the same event, and in the Derby shared the honors of the third award with Mr. Mahone's Byron. The special prize for the dog showing the finest natural abilities was awarded to Mr. A. E. Goderffoy's pointer Sefton, and second prize in the Derby fell to Tick, a young pointer dog owned by Mr. Geo. W. Post, of Brooklyn. This is a very creditable record, especially as the proportion of pointers entered for the trials was little more than one-fifth the total number. The recent victory of Mr. Vanderwort's Don, at Fairmont, Minn., supplemented by the record at High Point, N. C., has given occasion for rejoicing among the fanciers and breeders of pointers.

ENGLISH FOX HUNTING.—There are about 120 well-known packs of fox-hounds in England, in addition to many of lesser note, and the London *Field* records between 300 and 400 hunting appointments each week, aside from the regular meetings in Ireland and Scotland, which are also duly chronicled. The annual expenditure for the maintenance of packs and for fox hunting in Great Britain is said to exceed that of the whole civilized world beside.

On December 30th a coursing match will be held at Dixon under the management of the Dixon Coursing Club. The match is open to all dogs in the State, with an entrance fee of \$5, to be sent to the Secretary of the Dixon club on or before the 28th inst. There is plenty of good coursing ground near Dixon and all the club needs to make the match a success is a judge who understands his business. Dixon judges so far have not proven a success, but we hope that this match will prove an exception to the rule.

The Pacific Coast Coursing Club will hold their regular open spring meeting at Merced on March 7 and 8.

NEW FIELD TRIAL RULES.

The Regulations and Restrictions which are to Apply in Future.

Following are the new Eastern Field Trial Rules arranged by Dr. Fleet S. Speir:

It shall be obligatory upon the judges to keep the scores of all dogs running, and to furnish a copy of the scores for the use of the club, to which the subscribers shall have access. Nevertheless, the distribution of all awards shall be left entirely to the discretion of the judges, subject only to Rule 7 regulating protests. The judges are expected to be governed by the running rules as closely as the circumstances will permit, but they are not bound to give the prize to the dog making the highest score unless in their judgment he has proved himself the best dog in the race. Should there be a tie in the first series of heats, the dogs making the tie shall be considered equal, and run again to decide it. In the second series of heats the dogs making a tie may divide the honors, or the judges may decide without running again.

Rule 3—A withdrawal from a heat is a withdrawal from the stake. If a dog be withdrawn from a heat after he has been called upon to start, the other dog in the heat withdrawn from shall be compelled to run against a dog not in the stake, the substitute mate as above pointed out. No dog shall win a heat without running for it, except in the case of a tie in the second series of heats. The judges may suspend the running for the benefit of a dog which, having just run in a heat in the first series of heats, is obliged to run next in the second series of heats.

Rule 4—The judges shall order up the dogs as soon as they have determined which is the best according to the scale of points in Rule 5. The privilege is granted the judges of ordering up any dog or brace of dogs that have not sufficient merit, in their opinion, to get placed, but these may be put down again if there is a possible chance for them to win; and the scores of these dogs shall be taken; and may be withheld or not at the option of the owners.

Rule 5—Positive points for merit: Pointing, 35; pace, 20; backing, 7; style, 6; stannchness, 6; ranging, 6; quartering, 6; obedience and disposition, 4; retrieving, 10; total, 100.

Negative points for demerit: False pointing, 1 to 7; breaking in (each offense), 3; breaking shot (each offense), 5; chasing or breaking shot and chasing (each offense), 10.

Rule 6—No person, except the judges, attendants and reporters, or officers of the club, will be permitted to accompany the handlers of dogs. Two persons will not be permitted to work one dog or a brace of dogs, unless it be agreed by all the subscribers before the start. If from any cause the handler of a dog or brace of dogs is disabled to such an extent that he cannot shoot, the judges shall appoint a person to shoot for him. The handlers of two dogs in a heat shall go together as if it were a brace of dogs, so that the dogs shall be upon an equality as to ground, opportunities for pointing, etc. No spectator, except the owners of the dogs running, will be allowed nearer than seventy yards to the rear. No person shall make any remark about the judges or the dogs in hearing of the judges. The privilege is granted the handlers to ask the judges for information or explanation that has a direct bearing upon any point at issue; pending such questions the dogs shall not be under judgment. Dogs afflicted with any contagious disease or bitches in season will not be permitted on the grounds.

Pointing fur, feather or reptiles shall not be considered making a false point. A dog making a false point and discovering it to be such without any encouragement from his handler shall not be penalized. It is desired that all dogs shall, if time permits, have at least two opportunities to show their behaviour on birds. The judges are requested to exercise due care in making out the score of the dogs running.

The object sought in keeping the scores of the dogs running, is to furnish each subscriber with a record of his dog's work done in the trials, a study of which it is believed will be of benefit to owners, and enable them to improve their dogs in the points where they are found to be deficient, and it will be, to some extent, a guide to the members who breed their dogs, and enable them to select suitable mates, and it will also be a means of securing for future trials a constantly improving quality in the work of the dogs.

Rule 7, Regulating Protests.—The right of subscribers to protest is recognized by the club, but only such protests shall be entertained as are based upon a breach of the running rules or matters of fact in regard to errors of entry, or the introduction of fraud or injustice.

All protests must be made on the day on which the errors occur. Protests shall come before the judges and one member from the Board of Directors, and their decision shall be final.

Pointing—The judges will allow only those dogs the maximum that point all the birds possible for them to point under existing circumstances; a dog to earn the maximum number of points under this head, must display a first-class nose, exhibit great judgment in finding and pointing his birds, and make no flushes that a dog with the above qualities would avoid in ordinary hunting. The dogs are to be hunted in all respects as in an ordinary day's shooting. Inexcusable or willful flushes will detract from a dog's score under this head, but the character of the flush must be always taken into account in estimating the penalty, if any. They shall always consider the nature of the ground, the wind and the birds, and not penalize a dog for flushing a bird it would be impossible to point. The penalty for flushing is to be graded by the character of the offense. The judges shall not require the handlers to work their dogs down wind. Judges are allowed the discretion of declaring a dog out of the heat if absent when called.

Pace—The dog that maintains the fastest gait throughout the heat except when in cover or on game, to receive the full number of points, his competitor to be graded by

him. The score for pace need not be filled out or completed until all the dogs have run.

Backing—The maximum only allowed such dogs as stand or drop promptly at sight of another dog pointing. But no dog shall be expected to back unless the dog pointing stands and is motionless. A dog shall not be said to refuse to back unless he sees the dog pointing. To get credit for a back, the dog must stop at least ten yards (when practicable) in front of the handler.

Style—The judge shall consider the dog's grace in ranging and drawing and attitudes in pointing and backing.

Stannchness—The maximum allowed such dogs only as do not advance from their point when they are on game until they are ordered on.

Ranging—The maximum only allowed the dog that maintains the most killing range throughout, viz.: Wide or close, as the necessity of the case may require.

Quartering—The maximum only allowed such dogs as work at right angles with the handler, unless the nature of the ground renders such work impracticable.

Obedience and Disposition—The maximum only allowed to a dog that works promptly to the gun without noise or severity, and is obedient, prompt, cheerful and easily handled.

Retrieving—To receive the maximum under this head a dog shall go promptly and cheerfully for the bird, and deliver it to the handler without mouthing or mutilation.

False Pointing—The judges shall give the dog ample opportunity to discover whether or not he is on a true point, and the penalty shall range from one to seven for his acts throughout the heat.

Breaking In—Is when a dog, through imperfect breaking, or from excitement, leaves his position when the birds rise whether the gun is fired or not, and starts to break shot or chase, but stops within a few feet of the point from which he started of his own accord, or by command.

Breaking Shot—Is when a dog runs in when a shot is fired or not, with the intention of getting the bird, and does not stop promptly at command.

Chasing—Is when a dog follows the birds, either when the gun is fired or not, to any extent to be beyond the control of the handler, for the time being.

Puppy Stakes Rule—Dogs born prior to March 1 of preceding year will not be eligible for the Puppy Stakes. There will be no points allowed for retrieving in this stake. Rules otherwise as above.

Brace Stakes—The rules governing the Brace Stakes shall be the same as those used in the All-Aged Stakes, with the following exceptions: The maximum for ranging shall be 10 instead of 6; the maximum for quartering shall be 10 instead of 6; and the total 108 instead of 100. The brace to earn the maximum for quartering must cross each other systematically, and work independent of each other, or one dog must quarter the ground on one side of the handler, while the other dog quarters the opposite side, the dogs meeting at or near the center. Each brace will be run separately instead of running in heats, and be judged by the scale of points as laid down and explained. In case only one dog retrieves, the brace shall only be entitled to half the number of points for retrieving.

Premiums to the value of \$2,000 will be offered at the Ottawa, Canada, Bench Show, which takes place March 26, 27 and 28, 1883, and a like amount of prizes will be given at the Pittsburg Dog Show, of April 3, 4 and 5, held in connection with the annual exhibition of the Western Pennsylvania Poultry society.

Difference in Wools.

I feel somewhat like quarreling with the idea that so many have in supposing that a black gummy sheep is a sure indication of its fineness. The idea comes more forcibly to my mind in consequence of hearing so many at our late fair express their minds in that direction. One would suppose that a few ounces of the article that is sure to bring a discount when we sell our wool suddenly becomes valuable when looking at the sheep. Even awarding committees very generally are guilty of this weakness, and you are very sure of seeing the flutter of a red ribbon in their wake, lodged near the abiding place of the blackest sheep on the ground. I have taken some pains to ascertain some of the reasons why their preference is given in that direction, and almost invariably the reason given is that an oily, gummy buck is so much better to cross on the common ewes of the country. Others claim that after using a gummy buck and getting their sheep graded up to the proper standard, they then intend to breed for longer wool. Far better would it be to try by breeding to retain every particle of length that is possible, and grade to the required fineness, than to breed back and be obliged to go over the very same ground twice. It is much easier to retrograde in quality of wool than it is to advance. Short wool and coarse wool are easily produced, in fact they produce themselves if we but slacken our diligence one particle; try as best we may, some fleeces will be objectionable, and we are constantly obliged to keep turning off and weeding out in order to keep our flocks up to the proper standard. This system of keeping inferior animals when good ones could be equally well kept, and of course with a better profit, is very reprehensible; especially so when we remember the many facilities for getting good ewes and rams. To possess a fairly good flock of ewes, and a ram of good dimensions and wool, and of no chance breeding, is to have the first thing needed. But this in itself will not be sufficient if the necessary amount of forethought, energy and intelligence is not forthcoming, and it is often owing to the want of these latter qualifications that so many failures occur. It seems strange that a majority of farmers, after attending a fair and seeing first-class animals of the different breeds, can return home and again pursue the same old process of breeding without one thought of improvement put into successful practice. It seems that the old ruts in which our forefathers traveled have become so habitual to us that we are prone to follow on in the old way until some sudden jar produces an entire revolution in our plans and ideas, and then we are so thoroughly Americanized that we cannot make a gradual change like our more phlegmatic neighbors across the water, but make a pell-mell dive with mayhap both our eyes shut, and no guarantee of a safe landing.—*Cor. Ohio Farmer.*

BASE BALL.

The League Convention and its Work.

The legislative work accomplished by the League at its recent convention was, in some respects, the most important of any since the association was organized. The existing position of antagonism between the rival organizations of the League and the American Association was discussed and a committee of three was appointed by the League to confer with a similar committee of the American Association on the subject of combining together to uphold all contracts made by players with the clubs of the two associations.

The most important change made by the convention was in regard to the appointment and election of umpires. The existing laws on the subject were repealed and a law substituted authorizing the appointment of four members at a regular salary and amenable only to the established authority of the League's Secretary. The salary is \$1,000 for the season of five months, with hotel and traveling expenses paid.

In regard to the playing rules but two amendments were introduced, namely, a change in the rule governing the delivery of the ball to the bat, and the abolition of the foul-bound catch. Under the new rule throwing is now legal, the only throw now prohibited being that from above the shoulder. By the new rule the pitcher has ample facility given him for an accurate aiming of the ball, and for its command in delivery. The abolition of the foul-bound catch is an improvement which has long been advocated by Harry Wright and other experienced judges of the game and its requirements. In the existing code of 1882 there were two rules which occasioned dispute in regard to their correct interpretation, namely, the rules bearing upon running back to bases on foul balls and to the running of the base-runner from home to first base. It is now decided that the umpire had not the power to decide a player out who failed to run back to his base in returning on a foul ball. In regard to the batsman running to first base after three strikes have been called, it has been held that if he fails to run to such base after the third strike has been called the umpire must decide him out. These are the chief results of the recent convention.—*New York World.*

Olympics vs. Redingtons.

The picked nine of the O. C. succeeded in defeating the Redingtons at the O. A. C. Grounds, last Sunday. Redingtons were strengthened by Levy and Lawton of the Haverlys; the picked nine by Jerry Denny. The game throughout was very interesting; the batting of Denny, Conn, Van Bergen and Hardie was above the average. The fielding of Evatt, Denny, Hardie, Lawton and Ebner was fine. The umpiring of E. Van Court was satisfactory. Boyce, the favorite third baseman of the Haverlys, being absent, Denny filled his place and played a very good game. The score was as follows:

OLYMPICS.											REDINGTONS.													
T B R H P O A E											T B R H P O A E													
Conn, p. and c. f.	5	0	2	2	3	1	Arnold, 2d b.	5	1	1	1	0	1	1

THE RIFLE.

Good Shooting.

There was a rifle match of three at Shell Mound Park Sunday at 1 p. m. of fifty shots at 200 yards, with a possible score of 250. The contestants were Officer Linville of the police force, and Captain P. H. McElhinney and Lieutenant Sprowl of the militia. Sergeant Nash and Colonel S. G. Beaver acted as judges, Henry Work as referee, and G. L. Graves and H. Merriweather as scorers. The following is the score:

Linville.....	4	5	4	4	5	5	5	4	4	5	—	45
	5	4	4	4	4	4	4	5	4	—	42	
	5	4	4	5	4	4	5	5	5	—	47	
	4	5	4	4	3	4	5	4	5	—	43	
	4	4	4	4	5	4	4	4	4	—	41

ANCIENT AND MODERN ARMS.

The Grooved Cylinder, the Elliptic Bore and the Polygonal Bore Rifles.

BY DR. E. H. PARDEE.

(Continued from page 379.)

In my last communication I was speaking of the necessity of the bullet fitting so closely to the grooves as to prevent the escape of the gas through any portion of a groove that the bullet did not fill. This very thing caused our ancient gunmakers untold trouble; all the ingenuity of Europe was at work inventing a multiplicity of different shaped projectiles, while a continual change of rifling was taking place with a spirit of emulation among all the foremost and belligerent nations of the earth; not only individual enterprise was battling for the greater perfection of this weapon, but arsenals were erected at the government's expense, and a systematic course of experiments were conducted on the most elaborate scale.

I will attempt to give but few of the many methods of rifling for it would only be a tax on my time, and a desecration of the space it would occupy in your valuable paper. I will group them under three general heads, viz: the grooved cylinder, the elliptical or oval bore, and the polygonal. Rifling by grooves is a system universally adopted by gunmakers of all nations; particularly is this method of rifling used by all gunmakers that command any respect in the United States. And I believe at the present time it is adopted by all leading nations of the earth.

The oval bore is so inconsistent in its mechanical construction that I am at a loss to conceive how so intelligent a man as Mr. Lancaster, with his worldwide reputation as a gunmaker, would advocate so cranky a theory. The barrel is cut in its interior in the form of an ellipse, the difference between the major and minor axes being twelve thousandths of an inch. The only possible advantage it has is that the barrel, being a smooth bore, is easily cleaned. Cold comfort at least for an enthusiastic devotee of the rifle.

The polygonal was advocated by Mr. Whitworth, the proprietor of the celebrated Whitworth rifle, the bore being hexagonal and measuring across the flats, i. e., the minor diameter, four hundred and fifty-one thousandths of an inch, and across the angles, i. e., the major diameter, five hundred and three thousandths of an inch. Also by Wesley Richards, in his breech loader, the bore which is octagonal; and by Mr. Henry of Edinburgh, the bore of whose rifle is heptagonal, with a rib in each of the angles. To make my position more clear I will make diagrams representing the three different mechanical constructions of riflings, by which the rotation is imparted to the bullet. It will demonstrate the important fact that the human mind has been at work for centuries past to devise the best method by which the projectile and rotary velocity of a bullet could be made to act in its passage or flight through the air in unison, or so that the rotary would distract from the projectile velocity but as little as possible, and at the same time to overcome what is commonly called "windage." The barrel of the old smooth-bore was little else than a tube of iron in which the ball fitted so loosely that when clean it would by its own specific gravity fall to the breech. In order to load easily it was necessary to have the bullet a little smaller than the bore of the gun, which must necessarily allow a portion of the generated gas, from the ignition of the powder, to pass by the side of the spherical ball, and not only occasion considerable loss of propelling power but also a constant changing of the ball from one side of the barrel to the other, and, as a natural result, at the instant of its leaving the muzzle of the gun it received a direction from that side of the barrel against which it was last in contact, always resulting in a defective shot; therefore, one of the principal reasons that a smooth-bored gun would never hold a ball to a common center.

Another cause of unsteady flight of the ball from the smooth-bore, was that it was almost impossible to cast a spherical ball that would be perfect and solid; a slight hollow or air cavity would be found somewhere in the interior. The center of gravity would necessarily be effected by this unequal distribution of the metal, and as there was no rotary motion to cause the ball to spin on its own axis, as a sure consequence irregularity in the flight of the projectile would take place.

This matter of "windage" has been a troublesome thing to overcome, and I must say I am in doubt that it is mastered completely at the present day with all our modern improvements and boasted superiority achieved during the past quarter of a century in gunnery.

I do not wish to be understood that the above includes all the different devices that have been put forth for the past two hundred and fifty years, but that the above diagrams are the real principles from which thousands of different shadows have come and gone, but the principles have been left and fostered by the steady hand of science, until we begin to think we see the end approaching, not only in the perfection of gunnery, but in everything else.

It will be idle for me, in considering these different systems, to speak at length of No. 1, as it is now the only one that has stood the test of time; and with it, obstacle after obstacle, as they would come up like the heads of the hydra, has been overcome; and to-day it is recognized by all the intelligent nations of the earth to be the most simple and perfect of them all.

While I will refer to this system of rifling at some future time, and give my reasons for its preference, I am sure that a comparison with the other methods will prove it to be superior in every respect. Diagram No. 2 is a muzzle representation of the elliptic rifle and the credit is given to Mr. Lancaster, a celebrated gunmaker of England, but it was only a revival of a very antiquated system alluded to and most accurately described in "Scloppetarie," as a very old invention and quite obsolete, more than a century ago. I will say that this method of rifling was almost entirely confined to England although a few gunmakers in this country took the fever and the elliptic bore had the call for a short time only; while in England it has its advocates at the present time.

To show the eclat that was gotten up over the Lancaster rifle in England, I will quote from "The Rifle and How to Use It," by Hans Busk, M. A. D. L., London: "Of all the modifications of the principles of rifling that have been

brought out in this country, in America, and on the continent, none can be said to excel in simplicity the one now commonly known as Mr. Lancaster's system of elliptic rifling. A problem, the solution of which has long been a scientific puzzle, has been the reduction of windage to a minimum, without too great a concomitant increase of friction."

I am at a loss to reconcile myself to the fact, how a scientific man like "Hans Busk" could be so credulous as to give his support to a system so at war with the most common principles of gunnery. It reinstated the same difficulty that the old "Verevum Gaspard Zoller" in the primitive days of gunnery was trying to obviate, i. e., to cut grooves for the residuum to form in after the discharge of the gun, which was to obviate cleaning at almost every shot; it was hailed with enthusiasm by the English people, when Mr. Lancaster inaugurated his system of elliptical smooth bore rifle. The barrel being smooth, a turn of this ellipsis' was given in the barrel to impart to the bullet its rotary motion; and how the "windage" was overcome in an increased ratio over a well-filled bullet, in the smooth-bore, Mr. Hans Busk forgot to tell. That it did give to the bullet a rotation and kept it spinning on its axis, no one will deny. And that there was a greater necessity of wiping every shot in order to keep the gun clean, no one who will give the subject a little thought will attempt to deny; and as there was an increased friction on account of the bullet, in its passage, constantly pressing against the spiral of the ellipsis, is surely another proof, to wipe often in order to overcome and lessen friction to a minimum.

Still there is another objection, in my opinion, of more vital importance than those already enumerated. Mr. Lancaster gave this ellipsis one turn in about 30 inches; making his bullet nearly one and a half inches long, and forced to fit the caliber of the gun, the instant of its leaving the muzzle its untrue condition would set in commotion an atmospheric disturbance that must, in the nature of things, soon take from it the rotation imparted to it on its exit in the open and unconfined atmosphere. Again, the atmosphere, coming in contact with the greatest diameter of the bullet, it must have a tendency to cause a constant deviation from its true flight.

I am inclined to the belief that most all Englishmen are clannish, and they have a desire and love to praise and eulogize the results of England; and I am charitable enough to believe that had this invention that Mr. Lancaster claims, of a spiral ellipsis, been brought forth by a Frenchman, a German, or an American, instead of its getting the support from the pen of "Mr. Hans Busk," it would have denounced it as the veriest nonsense, emanating from the bloody head of some blasted foreigner.

No. 3. The great peculiarity of this method of rifling consists in the polygonal form of the bore, and like "the elliptic bore," it originated in the fertile brain of Mr. Whitworth, an English mechanic, and for a time it was nursed by government officials, and for a time it had a reputation for long-range shooting, that gave it a notoriety in all Europe.

But the inventor procured letters patent, which gave him the exclusive right to manufacture, and consequently all other gunmakers were at war with this method of rifling, and the zenith of its glory soon faded and passed away.

The great defect in the hexagonal-bored rifle is the extreme amount of friction, and consequently useless expenditure of means. Mr. Whitworth says his bullet rotates at the rate of 15,000 revolutions in a minute; the friction on the periphery of a bullet having this extreme spinning motion must very much lessen its range. If we weigh force, and carefully calculate its expenditure in 2,000 yards, we can safely estimate the periphery has made 4,000 revolutions.

Now, I ask the reader to look at No. 3 diagram, representing the muzzle of a Whitworth rifle, and estimate the friction it will undergo, bearing in mind there are about two turns in the length of the barrel, which, as Mr. Whitworth says, should be thirty-four inches long.

The bullet for the Whitworth rifle is manufactured in the most careful manner, and is composed of an alloy of lead, tin and metallic antimony, so as to render it hard enough to resist the tendency of upsetting.

The angles on the bullet must be cut with the greatest accuracy, in order to fit the groove of the barrel, possess, e. g., in fact, a female screw of two turns in every thirty-nine inches of length.

Mr. Whitworth is deserving much credit for establishing an important fact, in his method of rifling, which has done our English cousins much good; and that is, to lessen the diameter of the caliber, increase the twist, and lengthen the bullet, in a mathematical ratio proportionate to the incline of the rifling.

All this circumstantial evidence has assisted in making up the case, which has been submitted to an intelligent jury, consisting of some of the brightest intellects of the world, and they ask time for deliberation. Let's give it to 'em.

Sagacity of Dogs.

A curious story of canine sagacity is reported in the Cologne journals. The owner of a number of rabbits near Barnieu found that for six successive nights one of his rabbits was stolen from the house which he had made for them out of a wooden case which stood a few inches above the ground. At the top of it an opening had been made about the width of two hands, which was closed at night by a board on which heavy stones were laid.

The house having thus been secured, and as it was found each morning that only one rabbit had been stolen, and that all the rest were quite uninjured, it was considered impossible for a weasel to have effected the theft. It was, therefore, supposed that human hands had been at work. The owner consequently first made the opening more secure by nailing down one side of the board and covering it with grass and stones, and then hid himself in order to watch the thief.

A CALIFORNIA ROMANCE.

The Canary Bird and the Lottery Ticket—
A Tale of Oakland.

A long time ago, that is a long time in California history, there lived and worked in Oakland a German shoemaker. A short, square-built man with florid complexion and small, sparkling black eyes. In the early morning, before the sun broke over the crests of the Contra Costa range, he was busily at work, and when the grand luminary was settling beneath the Pacific horizon in a haze of glory the sound of the hammer on the lapstone reverberated from the little shop. A shop not much larger than a big dry goods box, and cluttered with old boots and shoes past his skill to repair. And yet there was a neat look about it, and on the low walls hung cages of canaries and linnets, with a few wood engravings pasted on the vacant spaces. He was a cheery little man, and between the songs of the canaries and the chirping of the linnets came refrains from the tunes of the Father Land, and snatches of operas. In a cosy little room in the rear of the shop his wife was just as busy, and the few household goods, the crockery on the shelves, and the tin ware which hung by the stove were as bright as the skill of the housewife could make them. They were a happy couple notwithstanding the evident closeness of their circumstances, and the notes of the husband would be caught by the wife, and the chorus rattled off with as much zest as though they had thousands at command.

A toddling, wee bit of a girl, with the black eyes and rosy cheeks of her father, the golden hair of her mother, was the only child, and she, too, would join in the musical merriment and take part in the family concert. It was indeed a happy family, as joyous as the canaries, as cheerful as the chirping linnets.

One hot and dusty afternoon a stranger stopped before the open door of the little shop attracted by the song of the birds. and after pausing a moment, walked in. He was a fine looking young man though his clothes were worn threadbare, and his boots were broken so as to show the bare feet inside. He apologized for the intrusion, telling the shoemaker that the song of the canary was so much like that of his sister's at home, that it recalled old memories, and the old familiar faces so vividly that he could not resist the temptation of listening longer. There was moisture in his eyes as he made the brief statement and a tremor in the voice, though there was a recklessness in his demeanor which did not harmonize with the emotion he displayed. The shoemaker proffered him a seat which he accepted, and looking down at his dilapidated boots, remarked, "that if he was not dead broke he would get him to mend them."

"No matter for that" replied the little shoemaker, "you like the songs of the birds, and I will mend them for nothing."

His visitor pulled off the worn boots; while the patches were being fashioned and sewed on he gave a short account of how he came to be in the impoverished situation. He had been mining in the upper country with such success as determined him to return to his old home, and he arrived in San Francisco a few months before with several thousand dollars in gold dust. He intimated that his life had been rather a wild one in the land of his nativity, but he felt that he would do better after the hardships he had suffered, and he especially desired to show his sister, who had often taken his part when his father was stern, that he had truly reformed. It was some time before the steamer would sail, and in the interim he had nothing to busy himself with but to walk about the town through the day, and stay at his hotel during the evening. The time hung heavily. The pinions of old father Time seemed to have big globules of mercury at the tip of every feather, and his sandals platinum soles ever so thick. From his hotel he could hear the bands playing at the gambling houses, and throngs of people were wending their way thitherwards. For many evenings he manfully withstood the temptation, and kept away from what he had good reason to think would bring evil. Gambling had led him into his worst scrapes, and he well knew the fascination there was to him in the excitement of the faro table. He had felt the keen claws of the tiger piercing through the outward integuments, rending his heart and tearing his brain, and the recollection was his safeguard.

One evening as he sat in the reading-room of the hotel, his fancy already carrying him to the scenes of his boyhood, he was startled by a man who accosted him by name, and raising his head there stood before him one of his old cronies, one of the worst of them who had been his companion in some of his wildest freaks, the instigator of what were actually crimes and which only the standing and respectability of his father saved him from the penalties attending the commission of. There was an involuntary shudder as he recognized his mephistophelean associate, though he felt pleased to see one with whom he could converse about old times, and as yet he had no misgivings about the strength of his good resolutions. After half an hour's conversation the visitor proposed a turn round the town. At first he refused, saying that he had spent several days in wandering about and all he wanted to do was to quietly spend the time until the steamer sailed.

"You do not know anything about Frisco unless you see it by gaslight," was the reply, "and I know all of the ropes and will see that no harm befalls you. We will take a short walk, and if you do not want to go to the theater, or the variety show, where there is lots of fun, or to the Mexican fandango, we will come back to the hotel."

Ashamed to refuse further the two strolled around the

streets, and he was struck with the difference between the scenes of daylight and those he now witnessed. In the daytime men were hurrying in every direction evidently intent on business, the sidewalks were crowded and trucks, drays, and wagons rattling over the cobble stones. In the evening there was a far greater throng on the sidewalks, but in place of the tumult, the bustle, the clatter of the working hours, the people were leisurely sauntering along as though their only aim was to enjoy the salubrity of the evening air. It was in the early spring-time, one of those vernal, mellow evenings peculiar to California, when the air is so soft and fragrant that there is pleasure in inhaling it, and the atmosphere is filled with a voluptuous aroma, indescribable, enchanting. The jewelry, fancy goods and variety stores were ablaze with light, the windows decked with a gorgeous display of goods, crowds of people congregated before them.

They strolled through the plaza, which was also filled with people listening to the music of the hands. His companion stopped in front of a house, in the balcony of which were the musicians, proposing that they should go in and see how the games were progressing.

"I have sworn never to play again," was the response to the invitation.

"There is no law to compel you to play against your will," was the reply, given in a half mocking, half laughing tone. Ashamed to resist further, he accompanied his partner, and when over the threshold he was astonished at the sight. In the Eastern town where he had lived the gambling houses, or club-rooms, as they were euphoniously termed, were in the rear portion of an upper story. To get there it was necessary to go through an alley, enter a back door, and after ascending the stairs, give a signal at a door which had a small aperture in it, covered by a slide. The slide would be pushed back, an eye peer through, and if the visitor was known, the bolt was slipped, and he was admitted. There was still another door to be opened, and if the Cerberus was not fully satisfied, the person would have to wait there until the proprietor had the opportunity to see if he was all right. Inside there was one table covered with faded green baize, a shabby check rack and still shabbier case. The dealing box was of plain white metal and the ivory checks stained, and some of them chipped. What a difference to walk directly from the street through wide folding doors, swung back to the full extent of the passage, into a bar-room with a long counter of rich foreign wood, the bottles and decanters of the finest cut glass, a mirror reaching from the floor to the ceiling and as long as the counter. There were several valuable oil paintings and ornaments of various kinds and the room lighted as brilliantly as a myriad of gas-jets could make it. Beyond was a still larger room, scarcely separated from the bar, the open space being nearly as wide as the space between the walls. This room was so thronged that it was difficult to find a passage way. There were two tables with the "lay outs" for faro, a monte table, at which presided a large, and, in the gaslight, a fine-looking woman, her apparel glazing with diamonds; a roulette wheel, rouge-et-noir table, and back of all a hilliard table, with as many as could get a place betting on rondo. There was a perfect babel of sound—English, Spanish, French, mingling in, so him, inextricable confusion. The company was as diverse as the language. Fashionably dressed men, with large gems on their shirt fronts and gloved hands, and jostling them were others clad in thick woolen shirts, coarse pants, tucked into long-legged boots, a belt round the waist, with the handles of one or two big revolvers sticking out of the cases, long hair and full beards, and complexions of a light bronze color; native Californians, wearing wide-rimmed sombreros, and many of them of such a sinister aspect as betokened treachery and cunning. Not a few women were also present, either betting on monte or watching those who did. Faro and roulette were the only kinds of play with which he was acquainted, and he and his comrade stopped in front of one of the tables. There were huge stacks of gold coin within reach of the dealer, and at his right hand was a mahogany box something like the trays used by bankers to hold specie. In this were piles of circular pieces of ivory, white, red, blue and yellow, stacked in regular order, and enough of them to nearly fill the tray. Many were in the hands of the players and distributed on a suit of thirteen cards fastened to the cloth.

"Throw in a slug," remarked his associate, "and we will try our luck. You're not playing you know," he continued as he saw him hesitate; "this is my trick."

Again he was ashamed to refuse and that before so many people, so he gave him the fifty dollars to which the other added fifty from his pocket and bought a stack of twenty of the white chips. From the first he was successful. Nearly every bet he made won, and the whites were changed for reds, and the reds multiplied until there were several stacks in front of him. In the eastern town the valuation was only one-tenth as much, twenty dollars was a big bet, and fifty the limit which the dealer restricted the players to.

Here men bet a thousand dollars on the turn of a card with as much nonchalance as those at home bet ten, and frequently his partner had a stack of the red chips, or \$500, down. It almost took his breath away to watch the play, and when his partner won so rapidly he became so excited he could hardly restrain himself.

Then the luck turned. He lost more rapidly than he won, and some blue chips and nearly all the reds were stacked back in the mahogany box.

"Here goes," he murmured as he put all the remaining chips on a card. It was some time before the card appeared, and the suspense was agonizing as the dealer pulled the pasteboard through the slit with the monotonous click, click

which marks the operation. It won. He left the whole amount; it won again.

It was only a short time though it seemed an age when he had regained the ground he had lost, and shoving the checks over to the dealer who returned \$6,000 in bright double eagles. He pushed \$3,000 of it to his partner with the remark:

"Pretty good off a hundred, we'll go back to the hotel."

To win \$3,000 at one time was beyond anything he had ever thought of. It was nearly half as much as he had labored so hard and so long for in the mines, and had been considered one of the lucky ones at that. He could not sleep. He thought of the piles of gold he had seen in the gambling room, and if \$6,000 could be won with a hundred, what might he do if he ventured a thousand. In several instances his partner had lost when he would have played differently, and he studied out a "system" which would be sure to make a big winning on that amount of capital. He pondered over returning to his native town with \$100,000, perhaps more, and he thought how he would astonish his old neighbors with his munificence.

His sister (his mother was dead) should have the finest carriage and horses, robes fit for a queen, diamonds, everything her heart could desire. His father should have a grand library of his favorite books, easy chairs, gold-headed canes, a watch ornamented with jewels, with an old-fashioned seal set with an emerald on which was cut his coat of arms, and a snuff-box radiant with gems. When morning came and he was up and saw the first glint of the sun's rays flickering on the ripples of the bay, he did not feel so enthusiastic. Reason took the place of fancy and he cogitated over what would be the result if he lost. He had an inordinate longing to get home, and to hazard the means of getting there was not to be thought of. So all day long there were opposing forces, and he wandered about moody and discontented. When evening came he was glad his old acquaintance did not make his appearance.

But the reading-room was never so dull, and in such a contrast to the brilliantly-lighted saloons, and the music, and the throng of gamblers, the whizz of the roulette, and the big piles of gold by the hand of the dealer. He went out thinking he would find distraction from the thoughts which tormented him by mingling with the throngs on the sidewalk and looking at the decorations in the blazing windows. The crowds were there, there were the same rare shows in the windows. The air was as balmy, and music swelled over the plaza as it did the night before. And yet there was a feeling of discontent he could not overcome. A strange sort of yearning, a half torture, a dread which tantalized him with its vagueness, a resolve he could not quite master. He walked down Clay street to Montgomery, turned quickly as he saw the flash of light from the open door of the gambling house, and at a rapid pace strode southward. He was on the corner of Bush ere he slackened his speed, and in place of going to Sansome street, on which was the hotel, he took the contrary direction, and once more was going north on Kearney; through the plaza again, and this time he was a little calmer.

"It is a square game, I am sure," he whispered, "and I need not play if I find I am losing."

He had come to the resolve he could not reach a few minutes before. The indefinite terror which haunted him had given way to elasticity of spirits, the dread was banished, and he complacently flattered himself over his newly found will-power. He had deposited \$2,000 of the \$3,000 won with his other money in the safe of the hotel. The remaining \$1,000 and a hundred or two besides would be all that he could lose, and if he found his luck adverse he would quit after a stack or two of white chips were lost. He banished the thoughts of home for the time being, and this was the resolution he reached. He thought over the system he elaborated the night before, when his mind was too much occupied to sleep. The system proved correct. He played cautiously, rarely risking more than two of the checks representing \$5 each, stuck closely to the plan he had marked, and after a long sitting rose from the table \$1,300 better off. It was a fatal winning. Had he lost the whole of the money in his pockets, in all probability he would not have risked more, in his anxiety to revisit his home, and with his faith in the system broken.

He left the room much calmer than on the previous visit, the handling of the checks and placing the bets being something in the shape of a safety valve to relieve the excitement. And then, too, he was convinced that his plan was correct, and in lieu of \$100,000, he would depart with a million to his credit. This was only one of the many big gambling houses in the town, and there was no end to the money to be won. He calculated the time it would take to a nicety, and how many steamers would sail before he was ready to depart. It is unnecessary to follow him through the varying fortunes of the next month. The inevitable result was sure to come. He became desperate as his money, the original capital, decreased, and played recklessly. When it was all gone he managed to live he scarcely knew how. An odd job on the wharves, sleeping where he could find a hole to crawl into among the bales of hay on the dock, a life ten times harder than the rough days in the mountains.

Spring-time had gone. The mellow air was followed by the trade winds and the golden autumn, with the brown hills and dusty roads. Without a definite object in view, he boarded the Oakland ferry-boat, paid his last coin for the passage, not even looking back on the city in which he had such high hopes, such bitter disappointments. Everything he possessed was on his person. Not even a blanket or an

extra shirt. A farmer who lived near San Pablo asked him if he did not want a job. His affirmative answer brought instructions how to find his way there, and he was commencing the journey when the warbling of the canary bird attracted his attention. This he told in substance as the little shoemaker was sewing on the patches, though there were a good many terms beyond the comprehension of the simple-minded German, and he could not understand how a man could take the risks of squandering thousands when he was contented to labor assiduously for a trifle. But all the kindness of his nature was aroused, and, notwithstanding the folly of a man who made such a confession, he reasoned that anyone who had stopped to listen to the song of birds, could not be utterly depraved. The hoots finished, his impetuous customer commenced searching his pockets, as though there might be a stray coin somewhere, when the shoemaker said:

"Never mind, my friend, and though I have little money, I will lend you enough to get your dinner, it's a long way to San Pablo."

"Here it is," was the reply, "a lottery ticket I was foolish enough to purchase before all my money was gone. With my luck it is sure to draw a blank; in yours it may be different."

For a time the shoemaker refused it, but finally pulled out a drawer beneath his work bench and threw it in amongst a heterogeneous mass of awls, pegs, balls of thread, bunches of wax, etc. For the rest of the day the shoemaker did not carol with the birds as frequently as usual. He could not drive the gloomy thoughts away, as he pondered over the sister and her canary with the loved brother a wandering outcast.

But the next morning when the sun gilded the summits of the hills on the east, and Mount Tamalpais wore a golden crown, he was as blithe as ever. The canary trilled its most brilliant notes and the linnets chirped a softer tune. The little girl ran out and in the shop, the bright colored ringlets falling in a mass on her shoulders, and the little wife was as gleesome as the birds.

Months passed. The rains of winter had given way to another spring time, and there was waving grass in the valleys and the sides of the hills decorated with the rainbow hues of the native flowers. The few gardens in Oakland were bright with blossoms, and the roses and heds of mignonettes perfumed the whole town. Busily the shoemaker worked. His only leisure time was on a Sunday when, with the wife and little daughter, they sought recreation, sometimes in the live oak grove on the Point, where the brown thrushes sang and the meadow larks twittered, and at others over in Alameda where the little one gathered bunches of wild flowers and chased the butterflies.

On one of these fragrant mornings a neighbor came into the shop and after the usual salutations inquired of the shoemaker if he had heard the news. Receiving a negative answer he remarked:

"Why, Tubal Hein, the blacksmith, bought a lottery ticket last summer, and he has drawn \$1,000 on it and is over in San Francisco having a grand time over his good luck. I was foolish enough to spend ten dollars the same way, but a fool for luck, I did not get a cent, though they sent me this sheet with a list of the drawing."

Instantly he remembered the lottery ticket which he had tossed into the drawer never having given it a thought since. With some trepidation he pulled out the drawer and rather nervously poked about among the contents. He merely answered, "I have a lottery ticket," and his friend aided him in the search. Finally it was found sticking to the leather on a ball of wax, though fortunately it was the back of the ticket which adhered. Before removing it the list was consulted and neither at first could believe their eyes when it was discovered that the numbers on it corresponded with those which drew a prize of \$40,000.

It could not be possible that such a stroke of fortune had followed the putting on the big patches on the stranger's boots, but his friend, better posted in these affairs, assured him that it was a reality, and that if he would go to San Francisco he could get it cashed for the usual discount.

He hacked his red cheeks in the operation of shaving, and his little wife had to button his collar and fasten his neck-tie. She was skeptical regarding the whole affair and thought it an unnecessary waste of time and money to bother about it.

When they went away, however, she became nervous, and bustled about, making a great clatter with the tinware, and to her intense disgust broke a tea cup which she was placing on the dresser. The only unconcerned inhabitants of the little domicile were the little girl and the birds, though the canary missed the accompaniment of the hammer on the lapstone, and the little girl was at a loss to know why her father had gone away without taking her mother and her with him.

All doubts were dispelled on his return. He had a certificate of deposit for the whole amount, less the percentage for getting the ticket cashed, and they were now rich. There was an anxious consultation that evening in the little room in the rear of the shop. His friend and his little wife sat around the little table, and the mugs of beer stood with their contents almost untasted. One thing they agreed upon, that the stranger should share the good fortune and receive half of the proceeds at least; but the trouble was to find him. As he had not given his name, there was no chance by advertisements in the papers, and though he had a faint recollection of his appearance the remembrance was too indefinite to rely upon. He had one sure means of identification, viz., the patches on the boots. He would know the patches if the boots were mixed with a thousand others, or if he saw them in any

part of the world. He had taken more pains to do a good job than if he had received payment, and the hoots, apart from the break on the side, were strong, of the best leather, and would last many months of hard usage without further repairing. Then they had the clew that he was going to work on a farm at San Pablo, though it was not likely he would remain there long.

It was past midnight when the course of action was decided upon. The first thing was that the secret of the lottery ticket should be kept inviolable, and the next, that the shoemaker should go on a search for the stranger. He was the only one who could identify the hoots, or who had taken notice enough of the visitor to remember him at all. A saddle-horse was hired of the livery man, the explanation that he had business "up country" and might be gone a long time being sufficient reason for making the trip. When he mounted the horse to start on his journey he did not make a very graceful appearance. His short, square figure, shoulders at right angles with the vertebrae, a straight line from shoulder to hip, there was little of Hogarth's curves in his form, and this was more apparent on horseback than when he walked. There was a good look in his face though, an honest, straightforward countenance, and on this eventful morning determination was as plainly seen in his bearing as at other times the predominant trait was good humor.

In the little hamlet of San Pablo it was easy to find traces of the person he sought. He had worked there long enough to get a little money, and some time ago started for the mines, though he had never intimated in what part of the State the mines he intended working in were situated. His employer told the shoemaker that he called himself Davidson, but that was evidently not his right name, as frequently he would pay no attention when addressed by that appellation, and as he never received a letter during his stay, there was no means of finding out. He had wrought faithfully, but it was also evident that he knew nothing about farming work, and his tasks were confined to those which only required manual strength. The shoemaker was pleased to hear that he wore away the boots, and that they were still in fair order. He also obtained a more accurate description of his appearance, and continued the journey with faith that he would be successful in the search.

It would be tiresome to follow him through all the trip. He visited various mining camps without being able to find a trace of the pseudo Davidson, and elicited many jocular replies when he described with almost microscopical minuteness the patches on the hoots. He never thought of giving up the search. He felt that it was a sacred duty which he must fulfill and every fresh disappointment increased his determination. He met with many adventures, and the life was so different from that in the little shop in Oakland with his wife and little girl, and the canaries to warble, and the chirping songs of the linnets, that he, at times, thought it must be a long dream from which he would awaken. At last he found the trail. Davidson had been there but under another name, and there could not be a question, for he still wore the patched hoots.

At other camps he heard of him, and if not found at one more in that part of the country the miners told him he must have gone to diggings in other regions. It might be Fraser River, it might be on the Salinas or the auriferous fields still further to the southward.

It was growing dusk when he was miles away from the point of destination, and before he got there the full moon was lighting the trail which followed the steep side of a mountain. It was so steep that trees could not get root, though there was a dense growth of chaparral, and hundreds of feet below the waters of the creek were breaking over the boulders. The white foam seemed whiter in the moonlight and the rush of the torrent over the rocks made a seething noise, loud and hissing even at the height he was above it.

For the first time during his long journey he had misgivings. There was a despondency he could not shake off. A premonition of something dreadful to come, and he thought of his little wife and the wee girl, and the song of the canary and the linnets, as what he might never see nor hear again. There was a steep descent and at the foot of the mountain, a slight widening of the glen formed a narrow valley. A few miners' cabins skirted the edge of the ravine, and in the one nearest to him a light shone through a hole which answered for a window. Tying the halter rein of the horse to a sapling, he knocked at the door, which was partly open, and a man's voice in low tones bid him come in. On a hunk lay a man moaning, but so feebly the sounds were scarcely audible, and on a stool by the side of the couch another was seated who was fanning the sick man with a wide-brimmed Panama hat. The shoemaker moved quietly to the side of the man, who held his disengaged hand up as a token not to disturb the sleeper, and in a whisper said: "I beg pardon for the intrusion but I am in search of a man by the name of Davidson, or—or—" but he could not recall the name given to him at the camp where he received the last intelligence, and completed the sentence with: "A tall, good-looking young man with a black beard, and big patches on his boots, I have good news for him."

"Your good news will come too late if I am not mistaken in your man," replied the watcher in an impressive whisper. "Just such a looking man as you describe came into this cabin about sundown, stole some bags of gold dust, and when he was carrying it out, the owner here met him, raising an outcry as he clenched the thief. The rascal stabbed him twice and ran. He was soon caught and the boys have him now on the little knoll about two hundred steps up the can-

yon, and if you hurry you may see him before they swi him off."

"My God! My God!" exclaimed the shoemaker, "six hours sooner and this would not have happened," in a tone so loud that it aroused the wounded man who partially raised up and the effort forced drops of fresh blood through a bandage which encircled his neck.

"Out of here quick" was the angry response, and he dashed out of the cabin and with a sort of instinct or intuitive knowledge of the right direction to take, he ran up the banks of the creek; he had to pause for lack of breath from the unusual exertion before he had run a hundred yards, and looking up saw a group of men on a slight elevation. It was as the miner described it a little rounded knoll covering, perhaps, an acre of ground, and on it were a few oak trees, lifeless without leaves or twigs, the scrawny, irregular branches straggling on either side of the holes. In the center of the group was a man taller than the rest, and in the bright moonlight the shoemaker could plainly see that there was a rope around his neck and thrown over one of the projecting limbs.

"Stop, for God's sake stop," he frantically shouted, again breaking with a run and continuing his exclamations until he reached the men.

Every man was looking at him and the silver mountings of pistols gleamed and glittered, some of them held within a few inches of his head.

"Who in the devil's name are you?" was the query from the man who evidently was the leader of the band.

"Oh, I am his friend," gasped the shoemaker, "I give ten, twenty, forty thousand dollars for you not to hang him."

"Not for a million" was the response in the sternest tones. "This man is a thief and a murderer and there is not money enough in California to save him from his just doom, and more than that," he continued, closely scanning the countenance of the shoemaker, "if you had not an honest face by G—d you should swing with him."

"Hang him, hang him up with him too, he must be his pard" one of the men said.

"No," returned the leader, "though it is a bad sign to acknowledge being the friend of a man like this, he may be innocent, and he does not look like a scoundrel but some of you keep your eye on him, we will attend to him after we are through with the business on hand."

Undismayed at his own peril, the shoemaker broke in.

"The man he stabbed is not dead, I just saw him and he may get well."

"Nevertheless he is a murderer at heart and must suffer the penalty," was the reply. "And now boys we have spent too much time already. Man the rope; all hands of you take hold."

During this short conversation the culprit never moved or said a word. His arms were pinioned behind him, and the collar and breast of his shirt had been thrown open to admit the proper adjustment of the rope.

He was erect and almost as rigid as a statue. The moonlight was broken into hars of light and shadow by the lifeless branches above him. His face was in the full glow, every feature nearly as distinct as by daylight. It was pale but there was not a tremor, even to the twitching of an eyelid. As soon as the leader gave the order, he spoke for the first time addressing the shoemaker, there was not a particle of the emotion which he had shown in the little shop in Oakland, the eye was undimmed and his voice was calm.

"My good friend, it's no use; this is a fitting end for such as I. Take good care of the canary. Don't tell my sis—"

At this juncture the leader waved his hands, there was a quick and strong jerk on the rope, the loved name was broken ere it could be pronounced, a short gurgling sound in the throat, violent spasms in the limbs, followed by shorter convulsive twitchings, and then the body hung limp in the flecked shadows of the dead oak tree.

The shoemaker was appalled. He stood motionless, a terrible fascination compelling him to keep his eyes on the strangling victim, and though he essayed to turn away his head it was beyond his power to accomplish it.

The feet hung dangling as high as the head had been before the body was swung, and there were the well-remembered patches on the boots. The leader spoke to him, but he paid no attention, and it was only after a rough shake that he seemed to be aware of what was going on.

"Now, my man, it's your turn," remarked the Captain; "let us hear what you have to say, and explain, if you can, your connection with this man, and how you came to be here on the day he committed the robbery and murder."

"Was it to aid him in getting away with the booty?"

"Let us get away from this terrible place," replied the shoemaker, "and I will tell you all about it."

"Make the line fast to that root and let the carrion hang there till morning," was the peremptory command, and that done the whole party moved towards the cabins.

The shoemaker and his questioner sat on stools fronting each other, the rest of the company standing and forming a cordon around them. There were forty or fifty of them all in the rough garb of the miners, and with beard and hair resting on their breast and shoulders.

The moon seemed to be floating directly over the canyon, illuminating every portion of it, and gave a weird, spectral-like appearance to the men. When the shoemaker first essayed to speak his voice trembled so much, and he was so incoherent in his replies, that the Captain ordered one of the men to bring him a drink of whisky, remarking:

"Take plenty of time now and tell a straight story, for your life depends on what you have to say."

Revived by the stimulus the little shoemaker recounted his

first meeting with the man, the mending his boots, and as nearly as he could, repeated the history which was recited to him.

The only variation was calling the money in his hands a legacy in place of saying that it was the proceeds of a lottery ticket, and this was the sole point which seemed to puzzle the rough Court which was trying him. They could not understand why a man who had only met another once should take such a deep interest as he had exhibited, and he was closely questioned. His answer that through him he had also fallen into a fortune, and gratitude compelled him to the task of hunting him up was, as some of them expressed it, "rather too thin."

There was a long debate over the question whether they would hang him or not, but the proposition of the captain that they would postpone further action until morning was assented to, and it was, perhaps, lucky for the shoemaker that this course was followed. He was given a blanket and told to lie down on the cabin floor while two of the miners stood guard over him. The sun had risen several hours before a stray beam had found its way into the deep canyon, and by that time the trial was over. The patches on the boots corroborated that part of the story, and when a couple of pieces of leather, and shoe thread and wax were handed him his dexterity gave ample testimony that his avocation was properly given. A few were for hanging him on "general principles," as they termed it, but the captain and a large majority were convinced of his innocence, and still more so when he requested that the old patched boots be given him to carry home.

Never was any one more pleased to get home. He cried, too, when his little wife put her arms around his neck and wet his shirt collar with her tears, and the baby clung to his hand, and the canary bird warbled its clearest notes, and the linnet twittered, fluttered and hopped about the cages with quivering wings, all to welcome him back.

There was another meeting that night in the cosy little room, back of the little shop, and there were wine glasses on the table in place of beer-mugs, and the rosy liquid was not allowed to stand untasted.

But again there were tear-drops on the cheek when he described the scene on the knoll under the oak trees, which were dead and blasted, and the dangling corpse with the wan face in the moonlight. The tears gave way to shuddering as he told of sitting on the stool before the stern questioner with the cordon of fierce-looking men surrounding them. And then the agony of the night on the hard floor of the cabin, with the measured step of the sentries before the blanket which served for a door, and he felt that if the wounded man died on that night, he would also be dangling from the gnarled, crooked branch on which yet hung the murderer. It was all over, however, and he was back—back with his wife and child and friends, and the canary bird was in full feather and would pipe a requiem for the poor unknown who came to so sad an end.

Plans were discussed and it was resolved that he would hammer and stitch in his little shop for a time, anyway. He was at his work bright and early the next morning, but the canary was disappointed when the only accompaniment was the rat-tat-tat of the hammer on the lapstone, and never a note from the tunes of the Fatherland, or a bar from an opera.

By and by it was whispered that the little shoemaker had some money to loan, which he had saved out of his earnings, and on better terms than the banks would grant. Then when more was forthcoming than could be credited to the savings from the shop, it was thought his friends in Germany were supplying the funds, and the difference between German and California rates of interest would make a rich man of him in time. After a while those who are always prying into other people's business found that deeds were recorded, the little shoemaker being the grantee, and not his rich German backers, and the description told of lots on Broadway in the center part of the city, and the recording clerk was kept busy until a whole block was thus deeded. All the time the hammer was drumming music out of the lapstone and the canary bird warbled in the little shop and the linnet chirruped, and the shoemaker joined with the old tunes.

The little wife was beginning to show that the years were telling, ever so little, for she was still bright and cheery, and the little girl had grown so that the golden curls had changed into a braid of brown hair. Workmen were busily engaged putting up a handsome residence on one of the main avenues, and every morning the little shoemaker would visit them to see how they were getting along. There was nothing grand or even stylish about it, though it was in a pleasant location, and nothing lacked for the comfort of the inmates. When finished and newly furnished from cellar to garret, the little shop and the cosy little rooms were abandoned. The birds in their cages, the wood cuts and the patched boots were about all that were taken, the other things packed in boxes and stored away.

In course of time, when the lawn was well set in grass, the trees and shrubbery well grown, and the flowers in profusion, the little shoemaker (we will still call him so though for many years he had given up beating music out of the lapstone) surrounded his place with birds. The old canary bird had languished, drooped and died though there were lots of his descendants, not one of them, however, which could warble with the clearness and fullness of tune which attracted the wanderer in the opening of our story.

The block was covered with stores, and the owner had a bank account far exceeding the amount which the lottery ticket drew. Everything he undertook prospered, and deservedly, for he was honest and straightforward. In the midst of prosperity he often thinks of the strange occurrences which led to his good fortune, and still shudders when the retrospect carries him back to the fearful night in the canyon where the checkered shadows fell on him who gave him the lottery ticket for patching his boots.

CALIFORNIA RACES IN 1851.

Spring Meeting on the Pioneer Racecourse,
Mission Dolores, Near San Francisco.

STEWARDS.

COL. WILLIAM SMITH,
ALEX. WELLS, Esq.,

SAMUEL BRANNAN, Esq.,
Judge SHEPARD.

Hon. GEORGE McDUGAL.

Judge—Capt. T. K. BATTELLE.

Associated Judge—Capt. B. RAY.

Honorary Secretary—Col. G. C. TURNER.

Owner of the Course—G. TREAT, Esq.

The first race over the Pioneer Course commenced on Thursday, 24th March. The uncertain appearance of the skies, and the frequent showers of rain in the morning, prevented many persons from attending, who otherwise would have done so; but, nevertheless, there was a fair number present. The appearance of the ground was very much like that of our home races; a perfect city of booths was erected, and the usual variety of games, as exhibited on such occasions, in other cities, was here less perceptible—the attention of the crowd being apparently absorbed in the excitement of the race.

The Corinthian has sent us the *Alta Californian* and the *Pacific Standard* from which we compiled the annexed report:

Thursday, March 24, 1851—Sweepstakes of \$15 each, with a purse of \$250 added by the citizens of San Francisco, for all horses, three-year-olds and upwards carrying 126 pounds—five-year-olds and upwards 140 pounds—horses bred in the State of California allowed five pounds. Mile-and-a-half heats.

W. Foster's gr c Ito, 5 yrs.....	2	dr
Jas. M. McDonald's b g Eclipse, 5 yrs.....	dis	

Time—1:50½.

The horses came up well together, and got a beautiful start, Boston leading Eclipse and Ito well up and going level. They got well on to the back side, Boston still leading, but well in hand; here Ito made a brush, outfooted and passed Eclipse, and lapped the colt round the turn. They swung into the homestretch in this position. As they passed the third quarter pole, Eclipse was six lengths behind, evidently tiring, as the pace was too sharp for him. Here the boy on the colt took him in hand, rammed home the gaffs, and made a most desperate struggle for the heat, which he won in sporting style, like a trump, by a length. Time, 1:50½.

Second heat—Ito withdrawn. Boston galloped over and received the purse and stake.

Same Day—A Silver Cup, with a sweepstakes of \$10 each added, catch weights. Half-mile heats.

Mr. Hanlon's ch f Venus.....	1	1
Mr. Mallet's ch g Lewis Cass.....	2	2
Mr. Johnson's ch g Citizen.....	3	3
Mr. Taylor's b g Spider.....	4	4

Time—0:57½, 0:55.

This was rather an exciting and pretty race. Venus and Cass had it all their own way, but in our opinion, condition won the race; the other horses just saving their distance in each heat. Venus evidently was in the best condition. The odds at starting were even on the mare against the field; but after the first heat the odds changed from even to a hundred to sixty on the mare against the field, and no takers.

Same Day—Napoleon Cup, with a sweepstakes of \$5 each added, for hacks. Mile heats.

Mr. Hanlon's ch f Venus.....	1	1
J. H. Mallet's b g Lewis Cass.....	2	2
Mr. Taylor's b g Spider.....	dist	
Mr. Johnson's ch g Citizen.....	dist	
Jas. M. McDonald's b g Eclipse.....	dist	

Time—2:05½. Track very heavy.

The first heat was won by Venus. In the second heat a false start occurred, when Cass ran off with his rider, a young boy of 12 or 13, who with much skill and nerve succeeded in getting him under control, and was coming into the course from the open country, whither the horse had taken him, when he was unexpectedly brought into collision with a horse and rider, who, it would seem, had gone in quest of him. The result was an immediate overthrow of both horses and riders. Fortunately both of the latter escaped without injury save a few bruises. One horse—the gallant little Cass—fell to rise no more. The nature of the injury received was supposed to be in the heart or loins; this incident tended to check the enjoyment in some degree; many backers of this horse were in the field and confident of his final success. In his previous contests with the mare he was over-weighted (she carrying feather weights) yet a close rival. Venus is a beautiful clean bred mare of light but powerful make and great stride. She cantered over the course the last heat after the fall of Cass without a competitor, thus realizing two cups, winning the two races. She is said to be from the Eastern States.

Second Day.

In the grand match for \$500 much sport was anticipated, from the fact that both horses are well known in this "burg," and each has troops of friends and backers. Ito, to our eye, was in tip-top condition, but owing to an accident in his stable, two days since, he showed lame in his oft hind leg, and his backers were not so confident as before; however, they came up well and posted the papers to a high figure on their favorite at \$100 to \$90, and freely taken. It being known by the betting men that Ito was a little amiss, the mare was the favorite in starting. Mary Snow was trained by William Cummings, and stripped like a "Fashion;" her backers stuck to her like a tick, and posted their money with confidence—but the bugle sounded, and up came the horses for the

First heat—Lady Snow had the pole—Ito outside. They went off at a beautiful gait at the tap of the drum, Snow leading, and Ito two lengths behind; as they got into the backstretch the horse let loose, went up and lapped the mare for a hundred yards. They remained in this position, until past the first quarter. As they neared the half-mile pole, Ito had opened a gap of three lengths on the mare. Time, first half-mile, 1:02. They remained in this position to third quarter pole—1:33. Here the rider of Ito rushed home his gaffs, and took a steady pull on his horse, and continued to open the distance to the stand—coming in amid cheers that made the welkin ring, nearly a distance ahead of the mare; and just saved her distance by half a length. Time declared, 2:04½.

Second heat—The bugle sounded, and they went off like twin bullets; a beautiful start—the mare leading as they swung into the back stretch. The mare was ahead some two lengths, when the rider of Ito, who had all the time been riding a waiting race, and confident the mare had not foot enough to win, let Ito go, to the delight of every one on the track, coming in amid tremendous cheering. First quarter, 0:30; first half, 0:61; third quarter, 0:32; last quarter, 0:31; whole time—2:04.

Too much credit cannot be awarded Mr. Turner for the admirable manner in which he tooled his horse, bringing him to the post in splendid condition and riding in a manner becoming a "Robinson" or a "Chifney." Much credit is due Mr. Cummings for the masterly manner in which he brought his horse to the post, who unfortunately was beaten. Ito carried 145 pounds; Mary Snow 126 pounds.

Tuesday, March 25—Match for \$5,000. Mile heats.

W. Foster's gr c Ito, 6 yrs., 145 pounds.....	1	1
Mr. Cummings' ch f Mary Snow, 149 pounds.....	2	2

Time—2:04½, 2:04.

Same Day—Proprietor's Purse, \$250. Mile heats.

Mr. Foster's b f Black Swan, 4 yrs., 149 pounds.....	galloped over.
Mr. McCauley's gr g Confidence.....	paid forfeit.

Time—2:05.

Same Day—Purse \$10, entrance \$2 each, free for all, catch weights. One mile.

Mr. Ellead's b p Charley.....	1
Five others.....	0

Time—2:15.

This was the most amusing race of the day, and presented the greatest variety of speed and rider, but all equally innocent of the "racing-mood,"—some in California gear, and some in wild Indian style, minus a saddle. When the little by-play of kicking got up among the horses to stretch their legs before the start had terminated, "Off" was given, and off they went at convenient distances, the Indian jockey rushing fiercely for a head place, which he at length secured, pressed closely by a ponderous animal apparently very recently emancipated from the plow—the ruck jostling each other in the distant rear. The pace was well kept up all through.

Third Day.

The third day's racing of the first spring meeting, over the Pioneer Course, came off on Saturday, March 29, it having been postponed on account of the rain. The track was in an awful condition, nearly fetlock deep on the back side. The races being advertised to come off, rain or shine, they did come off, to the entire satisfaction of every one who visited the course. The attendance though small was composed of a number of leading merchants, including a number of spicy sporting gents, who are always willing to wade knee deep through mud and rain to witness a well-contested trial of speed between thoroughbreds.

The first race was a sweepstakes of \$10 with \$250 given by livery stable keepers and others. Mr. W. Foster entered Ito, Mr. T. K. Battelle entered his bay three-year-old Boston. Both horses stripped well, and showed blood in every movement. Ito was in splendid condition, and the little pet Boston looked for all the world a winner, but being only three years old, and carrying 126 pounds on his back, it could not be expected that the knowing ones would back him to win against a five-year-old "flyer" like Ito, who, by the way, is a first rate mud horse, and had shown previously a wonderful turn of speed. In consequence there was very little betting. The bugle sounded, and up came the horses for the

First heat—They jumped off at the tap of the drum like twin rockets, a beautiful send-off, Boston leading a length to the first turn, then both horses came near to a stand still, as they had more to contend with than they expected, a large drove of "sporting hogs," heavy and light weights, having taken possession of the track, and were not slow to get off at the word. It must have been fifteen seconds before the horses could be let loose again, but they are now on the backstretch, and little Boston leading a length, Ito well up; as they neared the half-mile pole the grey made a rush, outlived the little horse in the mud, and opened a gap of four lengths, maintaining this position to the homestretch, when the jockey of Boston took his horse in hand and shook him up well, closing the gap to within a length. The heaviness of the track and the killing pace of the old stager put his chance back for the heat, Mr. Turner, the rider of Ito, landing his horse at the stand a winner, Boston three lengths behind.

Second Heat—Both horses cooled off well and came at the first call; they went away as in the previous heat, Boston a length ahead, Ito, however, the inside; they swung round on to the backstretch and remained in this position to the half-mile pole, when Ito went up and cut the bay down on the turn, opening a gap of five lengths. On nearing the last quarter Boston closed the distance to nearly a length, but "his mud and weight that kills"—Ito winning the heat by a length.

Saturday, March 29—Purse \$250, added to a sweepstakes of \$10. Mile heats.

W. Foster's gr g Ito, (Turner).....	1	1
T. K. Battelle's b c Boston, (William).....	2	2

Same Day—Purse \$50, added to a sweepstakes of \$5, catch weights. Mile heats.

J. Hanlon's ch f Venus.....	1	1
Mr. Johnson's ch g Citizen.....	2	2
Mr. Potter's ch f Lady B.....	3	3

Same Day—Purse \$50, added to a sweepstakes of \$5, for all beaten horses at the meeting. Catch weights. Mile heats.

Mr. Cummings' b m Mary Snow.....	1	1
Mr. Potter's ch f Lady B.....	2	dist

Same Day—Purse \$250, presented by the residents of the Mission Dolores. Half-mile heats.

Mr. Foster's b f Black Swan, 4 yrs.....	1	1
Mr. Cummings' b m Mary Snow.....	dist	

Time—1:01.

Immediately after this race there were several scrubs made up; some six or eight entered for each, affording much sport for the spectators.

Last evening a match was made at the Pioneer Club House, between two celebrated horses, for \$1,000 a side, for a half-mile spin; the money was deposited with Mr. T. K. Battelle, the match closed, to come off in two weeks from the 29th March. Play or pay.

Haverlys vs. Olympics.

The first of a series of fourteen games of base ball which are to be played by the Haverly, Olympic and Redington clubs took place at the Recreation grounds in Oakland last Sunday between the two first-named clubs. The score is as follows:

The Old Days in San Francisco.

There are many, doubtless, who still have a vivid recollection of the scenes so graphically portrayed by The Corinthian, and remember Thomas K. Battello, who wrote many a good thing for the old *Spirit* under the above pseudonym. Comparing the account with the gambling house episode in the story, it will be seen that the author did not draw on his imagination, and that it is really a transcript of an actual occurrence.

There can never be a repetition of these old-time doings, and it is quite as unlikely that the world will ever witness a return anything approaching the "days of forty-nine." As will be seen by the date of the letter it was written before the "spring of fifty," and therefore ranks among the "pioneers." That thirty-two years has changed things almost beyond belief is evident, and in nothing more than the changes in gambling. The "one hundred thousand dollar banks" is small comparison with the hazards which were taken a few years ago in California street, and that has given place to a comparatively "small game." Legitimate speculation is now the rule in California, and though some may still dabble in mining stocks, the fluctuations of the grain market, etc., the tendency is to employ surplus capital more in the way of production.

Luckily there is a grand field for the employment of every dollar; and with adding to the railway facilities, opening new farms, planting vineyards, stock-breeding, horticulture, commercial enterprise, manufactures, lumber, mines, etc., there are no lack of opportunities.

Faro bank, roulette and monte had their day, and after so short a space as thirty years there has come a better order of things:

The Corinthian in California.

SAN FRANCISCO, Upper California, Jan 30, 1850.

MOST POTENT SPIRIT: I promised you on my departure I would give you a few doings of the doings in this burg, and as the bugle has sounded and everything ready, the word go given, I am off at a racing gait, and the odds is a hundred to one I am not distanced.

San Francisco, the city of "oro," at present, is dull in the extreme; very little business doing with the merchants, as the roads to the mines are stopped, the rivers and small streams are so flooded by the tremendous rains that it is entirely impossible to navigate them.

Our city at present represents one scene of rude commotion. Pedestrians are rushing through the streets clothed with oil-jackets and mud boots; now and then you see a pair of mules hooked to a wagon loaded with merchandise, anchored some three feet in the mud, with no living show to get out; and I would here remark, that our city for the last three months has been a pool of mud and water.

Feeling in good spirits last evening, I took occasion to stroll around among the principal sporting houses. On entering Crocker's, the first impression that strikes the stranger is the immense quantity of gold and silver which is to be seen on the gaming-tables, amounting to \$15,000 or \$20,000, and upwards of \$200,000 on the several tables is not a rare sight in San Francisco. After taking a good look we passed into the Phoenix. On entering, the first table that met our observation, one of the fancy boys was seated at the game of chuck a luck, A B C, etc. He is now making his game, and commences:

"Come, give me a bet, who makes the game? All sot. All can play at this game. Take no pointers here. Come, bungle'er down! who bets this time? All in?" "Time!" (a mau steps up and places his finger on a letter). "No, sir, don't take any finger bets. Come, bungle'er down!" He throws the dice, and lifts the tin, A, E and G. "Come, give me another bet, etc."

Pass on a little further and we come to a rondo table. The game-keeper is crying out: "Come, gentlemen, who makes the bank?" Some one pops up fifty, then he commences: "Fifty in bank, who takes it?" One takes ten, and five and so on, until it is all taken, when the keeper cries out, "Come, gentlemen, hands up! The game is made—roll!" The roller makes a *coolo*, the bank has lost. The next is a rondolette. "Come, gentlemen, give me a bet? Let loose your gold dust. I have some tip-top scales. This is the game to win at." The ball goes round, it comes up eagle, he cries, "Eagle bird by chance!"

Here may be seen a number of miserable, ragged-looking men watching the ball, and invariably will be seen a man outside betting for a flat and capping the game; his winnings he places in a buckskin bag. Presently one of the bystanders, late from the mines and perfectly "rotten" with gold dust, will slowly draw out a long bag (his eye still on the ball, and watching the game). The game-keeper in a second has his eye on the flat, and instantly remarks, "Come down, come down!" and down goes the miner's bag.

"How much do you go on this turn, sir?"

"I go five ounces," says the flat.

And round goes the ball, and snap it comes back; the miner has lost but nothing daunted, and feeling a little excited, he pops down ten on the black. The ball goes round, it comes up black, miner wins.

At this stage of the game, drinks are ordered by the keeper, and paid for at twenty-five cents per glass, and then he cries, "Here she goes! Come, gentlemen, come down, give me a bet! Do you bet on that figure, sir?" And here comes the flat again, he dumps down his all on the black, (that has taken him weeks to procure). Then the game-keeper sings out, "the game is made, hand off the table!"

Round goes the ball, snap, comes up red. The gold-hunter is ruined, or in other words, broke. In a few moments he saunters out and the next day is off for the mines again.

The next is a monte bank, banked by a dark-eyed Mexican, who cries out in broken English: "Come, ombrys, who is going to tap my bank," and so he goes on, sometimes makes a heap, and at other times he drops it all. Seated by his side is his *querida*, who is his companion of his losses and winnings, who sits and deals the game for thousands with as much coolness as an omnibus driver would in New York run over an old woman.

Leaving the dark-eyed Mexican, we pass on to the next table, a thirty-six roulette-wheel, with two bars, the keeper, who, by the way, is a sharp joker (from Saratoga springs) crying out:

"Come, gentlemen, if you want to see me, you must see me now, before the steamer leaves! Who'll give me a bet? etc."

The next is the faro-tiger, known as the San Francisco phenomenon, owned and banked by a sportsman named M., a New Jersey farmer, who has the largest game in

California, his bank is \$100,000 and no limits. A great number of "legs," who are a little out, and who usually play the game up to the handle, have been bucking at the old farmer to a high figure. I understand they raked him down to the tune of \$40,000 a few evenings since. He was scotched, but not killed, and I have just been informed by a knowing one, that the farmer laid out the crowd cold yesterday, breaking the entire party, and making up his loss, and closing the game with \$36,300 in hand.

The next in rotation is a vingt-et-un table, with a dashing looking leg seated, dealing; he is one of 'em! you instantly would perceive by his knowing look, and the graceful manner in which he throws a "natural," which is sure to come up three times in five.

Passing on we come to the bar, sixty feet long. Here may be seen a number of our leading merchants discussing business, some purchasing land, merchandise, etc., and amusing themselves over hot punches, gin toddy, etc.

Music from nine in the morning till the dead hour of the night. And now, "Tall York," you have a fair description of the principal gaming houses in San Francisco.

Please remember me to R. and the Doctor, and propel as far as Frank's and moisten your alimentary canal with such exhilarating fluid as may best suit your weak nerves, and not forget Yours, "in a Lorn,"

THE CORINTHIAN.

P. S.—Col. Jack Hayes of the Texas rangers, has just stepped in and grabbed me by the fives, and "you must bet your life" that we are about to tiff. Jack is looking like a two-year-old, and moving like a quarter nag. By the way, what has become of the "ex-Santa Fe prisoner?" Has he arrived as yet? [No, but we expect him here from Paris this month.] C.

About Horses and Horse Feed.

Speaking of the horses of King Kama of South Africa, the author of the "Great Thirst Land," W. Gilmore, says: "Of one thing you may be certain, all of these horses can perform the most extraordinary journeys, although they know no other food than the grass of the velt—a prairie. They are not fat nor yet lean, but in that kind of hard, serviceable condition a hunter gets towards the end of the season."

The horses of Arabia will endure enough to kill, each one, half a dozen of our own and yet are fed on little but straw. We know that the mounds of our western prairies will in endurance far surpass our home stock. The Mongolians lope the day long on their fine horses. So do the southern Spaniards on their splendid mules. The Turks in the fifteenth century had the best cavalry in the world. They could conquer their enemies by the wonderful endurance and speed of their horses. A crusader named Brequier returned to France through western Asia and eastern Europe, among these people who had such famous horses. He says, in a narrative of his journey that is published, that they never gave their animals food or drink by day, but at night gave them a handful of barley and some straw or other dry food, with water, and nothing else.

Southern Spain is famous for its splendid horses and mules that rival those of Arabia for speed and endurance. When we get into northern Spain, into Galicia, we find these horses and mules no better than our own. Why is this? If we read that most interesting of all writers who ever wrote of his travels, George Borrow, in his "Bible in Spain" we will find the cause, although Borrow himself never seems to have suspected it. He says he had a splendid Andalusian stud. Slowly he ascended the mountain chain that leads into Galicia. When he got there his first greeting was, "Ah Señor! Why did you bring that fine entero here?" "Why not?" he asked. "Do you not know that Galicia is fatal to horses from the south?" He learned that nearly all horses and mules brought into Galicia get diseased and often die. "Something in the climate," but the only food ever given to horses and mules there is Indian corn. Doubtless animals raised there endure it in a kind of way. But to strangers it is as fatal as it was to the Irish during the famine of 1846, killing off tens of thousands, as is well known.

Hence came the foolish idea that high feeding and stimulating with malt or spirituous liquors are beneficial to any but hogs for fattening? The European and American world have come to the conclusion that the use of the liquors is baleful. May they in time learn what the old races of Asia knew ages ago, that spare feeding is good for body and disposition.—*Cor. Rural World.*

Some Thousand-Dollar Dogs.

Among the most notable of recent fashions in large dogs is the St. Bernard, which has almost suddenly pushed its way to the foreground. In England it is fast supplanting the collie, which has ruled as a prime favorite ever since the Newfoundland dog was dethroned, and perhaps as a result of this English fancy the demand for St. Bernards in this city is growing. "It is but lately that dogs of this kind have been asked for," said a prominent dealer to a reporter for the *Mail and Express*, "but they are very scarce. Only people of means can afford to own them, for they range in price—mind, I speak only of the genuine breed—from \$500 to \$3,000. Even puppies sell for \$200. Now, there is a fine eighteen-month-old fellow," he said, as a large, splendid-looking dog walked majestically into the room. "That dog knows as much as a majority of men. I have a regular bed for him and at night he puts his head on a pillow, I cover him up with a blanket, and he sleeps just like a baby. Worth much! I ask \$2,000 for him and I'll wager his equal cannot be found on this side of the Atlantic."

There are two varieties of the St. Bernard, rough-coated and smooth-coated, both having the same characteristics except in the length of the hair. The points supposed to be the distinguishing marks of a genuine St. Bernard are a tawny or brindle color, a clearly marked line up the face, and a similar one around the neck, and a full, square head. These animals are very intelligent, and seem to be endowed with the instincts of saving life. Their attachments are very strong. They require plenty of room for exercise, and fanciers assert that a dog of this species raised in the country, where he can have plenty of exercise, will grow to a much larger stature than one raised in the city.

Among the owners of St. Bernard dogs in this city is Samuel J. Tilden, whose Askim, one of the rough-coated species, has carried away many prizes. Mrs. D. P. Foster of South Fifth avenue is the owner of Turco, a tawny-brindle rough-coated St. Bernard, five years old, who was imported from the St. Bernard Pass, and who is considered one of the best specimens of his species in this country. Herman Clansen is the owner of Barry, a tawny rough-coat, imported from Lucerne, who is valued at \$500. H. H. Baxter of Fifth avenue owns a splendid fawn-colored smooth-coat dog, five years old, named Turk; and H. M. Hoar of East Fifty-sixth street is the owner of a tawny rough-coat, three years old, called Rover. John P. Haines of Tom's River, New Jersey, is a

noted admirer of St. Bernards. His Don, an orange, tawny and white smooth-coat, is a splendid animal, gentle and playful as a kitten. His owner values him at \$1,500.—*New York Mail and Express.*

YACHTING.

Although the season for yachting was over some time since, and but few of the whitewinged fleet are on commission, it behooves us at this time to take a hasty backward glance to see what has been accomplished by this, one of the best patronized, locally, of our out-door sports.

Take it all in all the season was not a satisfactory one by any means. One of the clubs had no annual regatta and that given by the other was not by any means first-class. The small yacht regatta was the best attended of the year, but even that was not up to the one given last year.

The truth of the matter is, there ought to be only one club here. There are not enough yachts for two; and what is more to the purpose, there are not enough yachtsmen. Three-quarters of the people who go yachting are not yachtsmen at all, and know nothing about handling a boat under sail. One club could prosper and progress, but the rivalry of two does no special good to the amusement. Both of them are weak in some particulars.

We are told, however, that there are elements which will not mingle and that there will be two as long as the leading spirits now controlling the respective destinies of the clubs remain with them. The worst feature of our local yachting is here hinted at. There seem to be several factions in the clubs, the rivalries of which affect the "cause" to its disadvantage. Our oldest club is specially afflicted in this way so that instead of being as prosperous as it should be under other circumstances, it does not advance. The differences should be healed as soon as may be, and mutual concessions urged, that the club itself should be able to take the position it really merits by its age and experience.

As to building of yachts some little of this is going on. Two fine large yachts are being built in this city, and one smaller one; and two small ones are in course of construction in Oakland. These will materially add to our fleet, and more are talked of. And this is the great encouraging feature, since the old boats will be bought by other people and more persons will join in the sport. A few of the old hands are dropping out and new blood is coming in, so that the yachting will not languish for want of enthusiasm.

There is no place in the world where yachting has the advantages of the weather we have here. For seven or eight months we have steady regular trade winds, which insure passages, and we seldom have drifting matches where races are sailed. True, our sailing grounds are somewhat limited in extent, and there is a taint of sameness. But the old hand will find many places to go which are pleasant to him, and he is always sure of "getting back," something which cannot be well counted on in other parts of the world where winds in summer are variable and light. We have to deplore the decline of small yachts among us as these furnish the yachtsmen for big ones. There are no small yachts in either club, and the tendency is now all to large ones. The owners of small yachts find they cannot keep up with the big ones in the cruises, and the time allowances give them no show in racing, so they become disgusted and want larger yachts or none. Therefore the twenty-five and thirty-foot boats have decreased in number and no new ones are being built. It seems to be agreed that thirty-six to forty feet is the smallest practicable size. The eighty and ninety-foot yachts do not build up the yachting interests of the East like the smaller ones because they cost too much to build, and what is more, cost too much to run. In a short time the owners become sensible of the constant expense, and the yacht is not as much used as would be one of less dimensions.

We hope for better things next season because the yachtsmen seem to recognize the fact that there must be greater harmony among them if their favorite amusement is to prosper. If some of the more energetic will take the matter in hand and break up the cabals and factions that exist, and take hold of the interest in earnest, there is no doubt that a better record will be made next year. More cruises, more races, less bricker and talk will bring the sport to the front. The BREEDER AND SPORTSMAN will do its share in the good work by faithfully chronicling all the events correctly and encouraging in every way the yachtsman's interests.

PLENTY OF YACHTS.—There are several yachts for sale in these waters just now. Commodore Harrison wants to sell the Frolic because he is going to Europe. Commodore Macdonough wants to sell the Aggie because he is going to Europe. Mr. Tevis will probably sell the Whitewing because he is having a larger yacht built. The Con O'Connor is for sale because the owners do not want a yacht any more. The Clara is for sale for the reason that her owner is engaged in fitting up a fine house and that takes all his time. It is rumored also that the Annie might be sold so the owners could get another type of boat. The little yawl Violet is for sale, her owner having no time to use her. The yawl Ariel is for sale for the reason that her owner is not a yachtsman and, having taken her in trade, never uses her. The little sloop Susan Nipper would change hands if a good offer was made. The yawl Emerald could be bought too as her owner wants a deep yacht. We do not believe Commodore Floyd would be averse to parting with the Ariel. So there are plenty of yachts if people want to buy. Second-hand yachts are a great deal the cheapest as the fittings seldom count in a sale.

LOG-LINE.—A correspondent wishes to know why "such an old salt like you" makes a lead-line with overhand knots instead of in the regular sea-going fashion. Because experience in sailing small yachts has taught us to use knots in preference to white and red rags, strips of leather and nothing at all for the "deeps." The knots can be counted by the touch at night and the rags require frequent renewing, while the "deeps" have to be guessed at which is not close enough work in a small yacht. We consider our plan much the more advisable, and more readily understood by casual amateurs using the line.—*Forest and Stream.*

Mr. Horatio Hathaway of the New Bedford Yacht Club, owner of the schooner Clio, purchased, Nov. 15, from Mr. Charles Watrous, the centerboard schooner yacht Rnth, which was built last season at Noank, by Mr. R. Palmer. She is 97 feet over all, 92 feet on water line, 23 feet 6 inches beam, 9 feet 6 inches deep, and 7 feet 9 inches draught.

FISH.

Trout.

Although this is not the season of year for trout to be much considered, it is just as well to remember that very shortly the Legislature will meet and that this body of representatives of the people have it in their power to look out for the fish if they so desire. It has been proposed to inflict a fine on any one exposing for sale any brook trout in this State during a term of years, as a means of preventing their total annihilation, which now appears imminent. The streams in this State which were formerly well filled are almost barren of fish and it is rarely that a good sized creel can be filled even by an expert angler.

It is to be expected of course that the creeks within any reasonable distance of the metropolis will be closely fished. And it is to be expected also that there will be men who will kill great and small alike, with more attention to the number of fish caught than the sport they may have with those large enough to show any "gamy" qualities.

The main difficulty which has to be contended with is the utter disregard of the law shown by the dwellers by the creeks. The Italians and Portuguese are the main offenders. There are many of them scattered along the small creeks, chopping wood, dairying, market gardening and the like, and they pay no more attention to the laws of the season of fish than they do to the laws of China.

They put lime in the pools or drain them, or use giant powder and hundreds of fish are sacrificed. Remonstrance is vain, and there seems to be no way to remedy the evil. Even in streams stocked with private care the fish are there killed by these vandals; they have no idea of sport; they want the fish to eat or to sell and will kill two or three hundred in mere wantonness. These facts are notoriously well known in the localities where the people of these nationalities dwell.

If the Legislature will comply with the request of the State Sportsmans' Association, it may be that in part a remedy will be supplied. The anglers themselves can greatly help also by giving information to the papers about these "trout hogs" who kill out of season or fill their creels with fingerlings because they happen to catch them.

All interested must help to do their "level best" if any improvement is to be made. It will not do for anglers to remain passive and wait for others to begin the good work. There ought to be an anglers' association on the coast for most of the associations are devoted to the gun and not the rod. In good time we hope to see this carried out.

Casting Tournaments.

The London *Field* says: We do not usually concern ourselves much with what are called casting tournaments, because they are, as a rule, held under such conditions and circumstances as to be of little or no practical value or test in actual fishing. Not long ago we heard a very angry discussion between two chance acquaintances, one of whom averred that he had cast twenty-seven yards (which was perfectly true, for we saw and measured it), and another gentleman who declared that he had cast twenty-two yards on one occasion, and he would be chawed into innumerable chips if anyone else could cast more; and the contention waxed high. This tournament shows, at least, that it is possible to cast thirty yards with a single-handed rod. Thirty-eight yards and two feet is a very good salmon cast; we have seen it cast before, however, and measured it; but it falls far short of Pat Hearn's famous feats, wherein he threw forty-two yards for a wager. But tournament feats are not to be put into competition with fishing casting; it is altogether a different thing.

Some time ago we heard of a competition at which the line was cast upon a large sheet of canvas, thus avoiding one of the most serious drawbacks to long casting in actual practice, viz., the friction of the line in drawing it out of the water, with all the weight of the water to weigh it down behind; the thing was absurd as a test of anything. Here we have a platform run out into a lake, raised three feet above the lake, which practically adds quite two feet to the length of the rod. Of course, the ground behind was perfectly level (at the least), and quite devoid of straws and tufts of grass, or bushes of any sort, and no doubt the fly (if any) might touch the ground even with perfect safety. Then, too, in most tournament affairs, both rod and line are picked out, and specially adapted to one another for long casting, and for nothing else. All these things are not in actual fishing. For example, the twenty-seven-yard cast we mention was with the rod, line, etc., being then fished with on the Old Barge at Winchester, the bank not a foot above the water, with high water meadow grass behind, and a rising bank. The least touch of the grass, of course, was fatal. There are no comparisons in the two things. It is no doubt a good thing to be able to make your rod do its best, and to make long casts when wanted; but it is one thing to make a long cast, and it is another to fish it. We have more than once known men who, to show their power of casting, more often than not would over-fish their cast, and then when their fish rose bungled him. For all these reasons, and for the further one that we dislike anything like the introduction of competition into the art of angling, as destructive to the spirit of it, we are not inclined to attach much importance to tournaments of this sort.

THE LONDON FISHERIES EXHIBITION.—The work of gathering material for one of the most complete exhibits of fishery products ever made is now going on. Professor G. Brown Goode, who had charge of the American exhibit at Berlin in 1880, will have the care of our display at London. This is a guarantee of care in the selection and arrangement of the display. The great collection of the Smithsonian Institution and of the National Museum will be sent, together with much new material illustrating our fisheries and their products.

One of the good fishing places of the future will be the shore along Raccoon Strait and up towards California City. When the San Rafael ferry landing is at Point Tiburon, in Raccoon Strait, as it soon will be, all the shore thereabouts will be accessible. There are lots of good points to fish from, and the water is deep. Some good-sized fish are taken in this locality.

The "white fish" caught up in the tule sloughs are so bony that they are not good for food. The Chinese eat them, however.

Sancelito is not so crowded with fishermen along shore as it is in the long summer days.

They are said to be catching mackerel off Oakland wharf.

NEW FISH COMMISSIONER.—The Governor has appointed as State Fish Commissioner in place of J. D. Farwell, Mr. Joseph D. Redding, eldest son of the late B. B. Redding, who was for many years the leading spirit of the commission. Young Mr. Redding will bring energy and enthusiasm to his task, but if he accomplishes only half of the work his distinguished father did, it will redound to the fishing interests of the coast. The appointment is eminently a fit one, and we are glad to see so active a man come into the commission feeling sure he will do much good. Our trout fishing interests are in a bad way at present, and the commission has plenty of work before it.

With the view of ascertaining the time required to hatch out carp eggs in the latitude of Georgia, Fish Commissioner Cary made an interesting experiment, from which it was found the eggs were hatched in from five to six days. The water in which the experiment was made was of the average temperature of 69 degrees in the shade.

Bay fishing along the Sancelito shore to Point Diablo was, during the latter part of last week and part of this, very good. Messrs. Bogart and Denning were out several times lately and had excellent strings of fish. Mr. Shane and his brother were at Point Diablo last Sunday and caught some splendid black rock cod and some sea trout that weighed from two to four pounds.

A few days ago Mr. Spencer caught a large salmon trout while fishing in a boat off Lime Point. The weight of this fish was ten pounds. Though salmon trout are occasionally caught off the end of the Oakland Wharf, it is an almost unheard-of occurrence to hook one in this locality.

The *Reno Gazette* says: "Very large trout are being caught in the Truckee ten or twelve miles down the river, but the same exorbitant price is kept up by those who sell them." If the Renosites keep on catching trout out of season, they will not ere long have trout at any price.

THE RIFLE.

Shooting at Petaluma.

A shooting match of 100 shots each took place at the Agricultural Park range last Sunday between Lieutenant Fred. Kuhnle and Robert Wallace of this city, Kuhnle giving Wallace 50 points. The guns used were 45-caliber military rifles, and the distance 200 yards. Although the range was comparatively new to Kuhnle, the weather unfavorable for good shooting, and the bulls-eye considerably blurred, yet he succeeded in making the best score, by one point, that has been made in the State. Captain Fairbanks and J. Naylor acted as markers and R. H. Whitson as scorer. The time consumed in the match was two and one-half hours. In conversation with Lieutenant Kuhnle he stated to the writer that the reason his score of Sunday was better than usual is the fact that the previous night he *slept well*. Wallace, although an amateur who has had but little practice, is probably above average, and will some day be a crack shot. This match is the first 100-shot contest that has taken place in the county. Following are

The San Francisco Police Rifle Team.

This is the name of a team recently organized, and from the name one is justified in the supposition that it is composed of members of the police force of this city. This team was organized for the purpose of furnishing recreation for policemen when off duty. It is to be hoped that the movement will be approved by the principals of the department. A meeting was held last Thursday evening for the purpose of choosing a military rifle that will serve their purpose. The weapon that was chosen was the Sharp's Borchart rifle, which is a very good gun. About twelve men signified their willingness to take hold of the movement and make the team one of the best on the coast. These men are C. Nash, J. C. Lane, Harry Hook, L. Whitworth, Serg't. Fleming, P. D. Linville, D. A. Peckinpaugh and officers Baile, Gano and J. P. McCarthy. There are as good shots among these men as can be found anywhere; all they need is a little practice, and under tuition of Serg't. C. Nash, who is an excellent shot himself, this team ought to be one of the best on the coast, and it is to be hoped that Chief Crowley will aid, by his approbation, the new team.

CARSON CROWING.—Some funny writer for a Carson paper amuses the readers by blowing a little Christmas tin fish-horn blast about the victory of the Carson Rifle Team in securing the bronze horse and rider, the Pacific Coast trophy. The humorist says that the California riflemen are overhauling our hills and valleys with fine tooth combs to get together a team that will return from the next contest with the trophy. He also says that the First Regiment boys lie awake nights studying to mount back-action sight wind gauges that will predict what the weather will be three days in advance, beside a great deal more nonsense. To cut matters short, the California Teams is glad that the Carson Team was victorious, for if the First Regiment Team had won, though we don't wish to crow for the First, it would have been with them as it was with Alexander of old when he conquered the world, there would have been nothing more on this side of the hills to compete with. We are glad that the Carson team won the trophy and hope that the best team will win it when it is shot for again at Treadway's Park at Carson next spring.

A rifle match of 50 shots at 200 yards for a gold medal valued at \$100 will take place at Shell Mound Park on the 7th of January between Officer P. D. Linville of the Police force and Mr. Geo. H. Brown. It promises to be an interesting match.

National Association of Trotting Horse Breeders.

Following is the report of the Executive Committee of the National Association of Trotting Horse Breeders to the sixth annual business meeting, held at the Everett House, N. Y., at 2 p. m., Wednesday, December 13, 1882: Pursuant to the constitution your committee respectfully submit the following report:

The committee have held seven meetings, all of them in the city of New York.

At a meeting of the committee, held on the 10th of January, the following were elected for the ensuing year as a Board of Censors: Guy Miller, F. D. Norris, David Bonner, E. G. Doolittle, W. S. Tilton.

At a meeting of the committee, held on the 9th of March, the following were appointed by the President as a Committee on Trotting Rules: Chas. Rackman; H. M. Whitehead; I. V. Baker Jr.; Geo. B. Alley; C. A. Willis; H. W. T. Mali, Ex-officio and President; L. D. Packer, Ex-officio and Secretary.

The result of the committee's action, together with certain proposed amendments to the constitution submitted by the President, having been laid before the committee at a meeting held this day, and duly approved, are herewith appended, and recommended for your favorable consideration.

Of the action of the committee relative to the stakes opened, nominations and several payments therein, together with the location and results of the introductory and sixth annual trotting meetings, you have been duly informed by circular letters addressed to each member and through the public press. Eighteen stakes were decided, amounting to \$13,545, and the meetings were characterized by a greater number of starters in each stake, closer contests, lower records and better financial results than ever before within the history of the society. In the eleven stakes already closed and yet to be trotted, there are 318 nominations, involving the sum of \$16,785, as follows:

In the National Trotting Stallion Stakes, for foals of 1880, there is \$1,015, and 24 nominations from whom will be due a second payment of \$15 May 1st next, and a final payment of \$60 each from starters twenty days before the annual trotting meeting of 1883, when the stake will be trotted for.

In the "Fourth Renewal of the Annual Nursery Stakes," for foals of 1880, there is \$530, and 53 nominations, from whom there will be due a second payment of \$15 each July 1st next and a final payment of \$25 each due from starters twenty days before the annual trotting meeting of 1883, when the stakes will be trotted for.

In the Mali Stakes, for foals of 1880, there are 24 nominations, amounting to \$1,200, with \$500 added by Mr. H. W. T. Mali; a second payment of \$50 each will be due May 1st next, and a final payment of \$150 each due from starters twenty days before the trotting meeting of 1883, when the stakes will be trotted for.

In the National Trotting Stallion Stakes, for foals of 1881, there are 38 nominations, whose payments, together with the subscriptions of the owners of the sires named, amount to \$1,085; a second payment of \$15 each will be due May 1st next, an additional payment of \$15 each will be due May 1st, 1884, and a final payment, of \$60 each twenty days before the meeting of 1884, when the stake will be trotted for.

In the Wilson Stakes, for foals of 1880, there are 49 nominations, and the stake now involves the sum of \$9,100, to which will be added a final payment of \$50 each, due from starters twenty days before the meeting of 1880, when the stakes will be trotted for.

In the Produce Stakes, for foals of 1881, there are 19 nominations whose payments, together with the subscriptions of the owners of the mares named, amount to \$1,725, to which will be added a second payment of \$50 each, May 1st next, and a final payment of \$50 each twenty days before the meeting of 1884, when the stakes will be trotted for.

In the Juvenile Stakes, for foals of 1881, by stallions whose get have never beaten 2:30 at three years old or under, there are forty nominations, amounting to \$400, to which will be added a second payment of \$25 each, due May 1st next and an additional payment of \$25 each, May 1st, 1884, and a final payment of \$40 each due from starters twenty days before the meeting of 1884, when the stake will be trotted for.

In the Everett House Stakes, for foals of 1881, by stallions whose get have never beaten 2:45 at three years old or under, there are twenty-five nominations, amounting to \$250, to which will be added a second payment of \$25 each, due May 1st next, an additional payment of \$25 each, due May 1st, 1884, and a final payment of \$60 each, due from starters twenty days before the meeting of 1884, when the stake will be trotted for.

In the National Trotting Stallion Stakes, which closed for sires May 1st, 1882, and will close for their get (foals of 1882) May 1st, 1883, there were 12 sires named whose owners subscribed for each their season's service fee (for 1882), amounting to \$650.

In the Matron Stakes, for foals of 1882, the produce of mares bred in 1881, closed May 1st, 1882, with the subscriptions of the owners of ten mares named, amounting to \$250, whose produce (foals of 1882) are eligible to entry, May 1st, 1883, at \$150 each; \$50 declaration.

In the Annual Nursery Stakes, for foals of 1881, there were twenty-four nominations, amounting to \$600, to which will be added a second payment of \$25 each, due May 1st, 1883, an additional payment of \$25 each, due May 1st, 1884, and a final payment of \$75 each, due from starters twenty days before the meeting of 1884, when the stake will be trotted for.

The association has lost by death during the past year one member; one has resigned; nine have been dropped from the rolls for non-payment of dues; thirty-five members have been elected and have duly qualified, and the society now numbers 155 members.

A vast amount of capital and labor is now involved in the breeding and development of trotting horses. With what intelligence and skill this is all being directed, the brilliant records of each season's turf campaign bear ample and signal testimony.

In that department of the trotting turf to which it has been the special purpose and province of this organization to confine itself, the development and exhibition of the younger rather than the aged class, the achievements have been so remarkable as to excite universal admiration and astonishment, and forshadow how great are the possibilities of the trotting horse of the future.

Thus far the history of this association records no backward step; its advance has been steady but sure. If the results of the past, particularly those of last year, showing, as they do, the society free from debt, with a handsome balance in the treasury, a largely increased membership, and a list of trotting stakes never before equaled in character, value and proportions, are any criterion of the future, then may we well consider it as already assured.

L. D. PACKER, Secretary.

Albert W.

On the first page there is so good a representation of this famous young stallion that it is scarcely necessary to supplement it with a written description. The ears are a trifle short in the picture, and the head a shade too "clumpy," but in every other respect it is a faithful delineation, and gives promise of future excellence in animal portraiture by the artist, Fred U. Buehler.

Albert W was bred by his present owner, who purchased his dam from Mr. E. R. Pond. He was foaled June 7th, 1878, and therefore would be considered a "late colt" even in eastern regions. He was broken to harness in March, 1880, so that he did not have the advantage of an "early education" in the sense that is now given to the instruction of trotting colts, and it was well along in the season when he received his first track work. This history will show that his career has been more than successful, and when compared with that of entire horses is still more remarkable.

It is only a few years since George Wilkes trotted in 2:22 and that performance placed him first on the list of trotting stallions. At that time Ericsson had the pride of place among four-year-olds with 2:30 to his credit. Both of these were regarded as wonderful performances, and deservedly so, and now we have the pleasure of recording the same time as that of Wilkes for a California-bred four-year-old, and to emphasize the feat the 2:22 was made in a third heat, repeated in a fourth, and the fifth only a half a second slower. This would have been a creditable performance for a stallion of any age; when made by one of the age of Albert W, it takes rank with the very best and entitles him to a prominent place among the "notables" of any country.

On the same day there was a race for four-year-olds at Chicago, and the intelligence came that Jay Eye See won the first, third and fourth heats in 2:22½, 2:19, 2:19. There was an error in the statement that the winner was a stallion, as unfortunately the great colt is a eunuch. The great advantage which follows emasculation on the trotting tracks is too well known to require argument, and as is shown by the records there is only one instance where an entire horse leads, that being the five-year-old record of Santa Claus (2:18). Smuggler is five seconds behind Maud S, four in the rear of St. Julien, Rarus, Trinket, Goldsmith Maid, Clingstone and Hopeful also having better records. From this it is not out of the way to estimate that the three seconds which Jay Eye See leads Albert W does not give the gelding the preference. We do not wish to detract an iota from the well-earned fame of the son of Dictator, nor have we the least desire to give Albert W a greater prominence than he deserves. The gelding is entitled to the credit of trotting the best race which has ever been made by colts of any age, and the stallion by far the best of male performers before the "mouth was full."

To breeders the most prominent features are the lines of blood which have led to such an astonishing result, and both of them give the same answer, viz: A combination of the Hambletonian with fresh infusion of thoroughbred blood. Jay Eye See is by Dictator, his dam (the dam of Dexter) by Seely's American Star. The dam of Jay Eye See, Midnight, is by Pilot Jr., her dam, Twilight, by Lexington and thoroughbred. Midnight is also the dam of Noontide, a mare with a record of 2:20½, and as she is by Harold is nearly a sister in blood to Jay Eye See. American Star was a highly bred horse, so that the racing blood predominates in the victor at Chicago.

The dam of Albert W is a sister to Aurora, by John Nelson, and John Nelson was by imported Trustee, from the Redmond mare, by Abdallah. This pedigree has been questioned but only by those who have such a violent antipathy to the thoroughbred that it warps their judgment and forbids a candid weighing of testimony. They are ready to believe the most absurd stories when these fall in with their notions, impugn the evidence of reliable men when it runs counter to their views, and profess rather to believe the maunderings of someone overcome with the senility of over fourscore years, than proof which was accepted as correct at a contemporaneous period. We have before us an advertisement of John Nelson, published in 1860, soon after the horse was brought here, and the following is a transcript:

THE FINE TROTTER STALLION JOHN NELSON WILL STAND AT Robert Beatty's "White House" during the season beginning March 1. He is a rich, bright chestnut, with a star on the forehead, and two white hind feet and is fifteen hands high. Terms for the season, \$75. John Nelson is by imported Trustee out of the Redmond mare (who trotted in 3:35), by Abdallah, he by Manbrino and he by imported Messenger. John Nelson is half brother to the celebrated trotting gelding, Trustee, who trotted twenty miles in the unprecedented time of 59:36½, and he bears the same relationship to Fashion, Revenue and Kenbe Rynders, all splendid four-mile racers. His half brother, Revenue, now stands at Versailles, Ky., for \$150 the season. Mares left at the stables of Messrs. Porter & Flenner will receive prompt attention. Parties living at a distance, requiring the services of the horse, will please address them, or J. M. DANIELS, 134 Kearny Street, San Francisco.

Now this advertisement was published in the *California Spirit of the Times*, that exchanged with the papers of the time, and any man who had one-half of the experience of Mr. Daniels would know that a false pedigree would soon be detected. Like many others it was never questioned until it was supposed that years enough had elapsed to bring it in doubt. At all events the get of John Nelson show unmistakable signs of "blood," and many of them display the Abdallah characteristics. The double Abdallah cross is shown in many of the crack performers, and even when derived in double quantity through two strains of Rysdyk's Hambletonian. Goldsmith Maid is a notable example of the first, Clingstone of the second, and illustrations could be multiplied until tiresome of the "potency" of the dual progenitors.

The get of John Nelson have taken a prominent place in the trotting calendar, and the mares by him are as sure as

anything in the future can be to prove of the greatest value in the stud.

Aurora, the sister to the dam of Albert W, gained a record of 2:27 in 1872, and was supposed to be the best of her day. Ex-Governor Stanford paid a high figure for her—report says \$20,000—and there cannot be a question that if she had not gone lame she would have reached a very low mark. Nerea in 1875 trotted in 2:23½, and Governor Stanford made 2:27½ in 1876. The dam of Medora is by John Nelson, and foals from Aurora and Nerea are of great promise.

The first race which Albert W took part in was at the Golden Gate Fair, September 14th. It was in a purse of \$400 for three-year-olds, and he won in 2:43, 2:49, 3:23. In the last heat the drivers did not understand that "the word" had been given, and the colts were pulled up, turned to come back and again started. His next race was at Sacramento, Flight and Rowdy Boy his competitors. Flight won the first heat in 2:42½, Albert W the others in 2:39½, 2:36½, 2:39. At Stockton he was again successful, winning the first, third and fourth heats in 2:37, 2:35, 2:32½, Flight the second in 2:35. At San Jose he was beaten by Sweetheart in 2:30, 2:25½, 2:26, and he trotted in 2:28 the last heat although he got a bad start.

In 1882 his first race was at Santa Rosa, and a very hotly contested one it was. The colt had not recovered from the "pinkeye," and he had to meet Inca, Poscora Hayward and Blackmore. Inca won the first and third heats in 2:27, 2:27½, Albert W the second in 2:27; the fourth was a dead heat with Poscora Hayward in 2:28½, and he won the fifth and sixth in 2:29½, 2:32. His second race was at Petaluma, where he defeated Poscora Hayward, Inca and Blackmore in "straight heats" in 2:27, 2:26½, 2:24½, and his third was at Oakland, and again he had a hard struggle of seven heats which is well worthy of the full

SUMMARY.

Sept. 5—2:30 class, purse \$800, \$480 to first, \$240 to second, \$80 to third horse, nine heats, three in five:
A. Waldstein's b s Albert W, by Electioneer..... 3 3 3 1 2 1 1
S. Sperry's ch m Nellie R, by Gen. McClellan Jr..... 2 2 1 3 1 2 2
J. A. Goldsmith's b m Sweetness, by Volunteer..... 1 1 2 2 dis
W. D. Hammond's gr Poscora Hayward, by Billy Hayward..... dis
Time—2:22, 2:24½, 2:23½, 2:28½, 2:26½, 2:25, 2:26½.

This was a great race for a four-year-old, and an unfortunate one for Poscora Hayward, who broke down so badly that it was with difficulty he could be brought back to his stall.

His first and only defeat in 1882 was at Sacramento. The race was won by Sweetness in 2:24, 2:21½, 2:22½, Albert W only beaten a length in the fastest heat.

The races at Stockton and San Jose were brilliant finishes of the season; so brilliant that we copy them entire from the reports at the time, with the remark that the "3 in 5" is the race referred to near the opening of this history. Still the heats of two miles, in our estimation, is the greatest performance, not only ranking within two and a half seconds of the fastest, as it is also the fastest for any entire horse, and within half a second of that of Flora Temple, which for so long a time was the best on record. At Stockton the race closed with nine entries, but with some disqualified and some drawn the starters were reduced to three, Sweetness, Nellie R and Albert W. Sweetness was a great favorite in betting circles, partly from the manner in which she had won her race in Sacramento, and partly from the prestige that attaches to Goldsmith and Mr. Salisbury's stable in these later meetings of the circuit. Pools sold before the start ran: Sweetness \$50, Nellie R \$18, Albert W \$12. In the lottery for positions Albert W drew the first prize, with Sweetness second and Nellie R outside. Scoring for the word in the first heat was somewhat tedious through the rank behavior of Albert W, who acted as though there was lax discipline in the school where he studied. When the bell did tap they were all in good shape, but the colt broke at the sound and commenced the service with a sharp run. Sweetness took the lead at once, with Nellie R on her wheel, and thus they went to the quarter in 36. At that point Nellie R broke up and Albert W took the second place, Sweetness in the meantime opening a gap of three lengths. Before the half was reached Albert W again left his feet and Nellie R sped around the turn after the leader, leaving the colt eight lengths in the rear. Nellie closed the gap rapidly and at the three-quarter pole was at Sweetness' wheel, Albert having also shortened the interval a couple of lengths. In the trot up the stretch, Nellie pushed Sweetness to a break and came to the wire first in a jog, Sweetness second, Albert W third. Time 2:22½. It appeared from this trial that Sweetness was not herself, and the speculators who had backed her heavily in the pools made haste to secure themselves by putting in large sums on the big chestnut, an operation that proved to be a repetition of the old story of out of the frying-pan into the fire. The first pool sold was Nellie R \$150, Sweetness \$70, Albert W \$27, and the last one before the start was Nellie R \$40, Sweetness \$16, Albert W \$14.

Second heat—There was less difficulty in starting for this mile, Sweetness getting away first, but Nellie R showing such a measure of speed that she was taken back and brought to the work gradually. Albert had overcome his disposition to break and was trotting squarely close in the trail. At the quarter in 35½ Sweetness showed in front, but at the half in 1:10 Nellie R was neck and neck with her, Albert five lengths behind. Around the turn was without change, and in the home work Goldsmith, with whip and voice, urged his mare to her utmost, but Nellie was in her happiest mood and she came under the wire without hard driving, winner by half a length, Albert W third. Time, 2:20. The rush to "get out" was greater than ever. The first pool sold was Nellie R, \$200; Sweetness, \$27; Albert, \$25, but as the selling progressed the excited speculators cooled somewhat, and the last pool was Nellie R, \$110; Albert W, \$30; Sweetness, \$10.

Third heat—They got away together and at the quarter in 36 Nellie R was in front and Albert W behind, but all lapped. In the backstretch the colt skipped and found himself the last member in the line by a length, Nellie R drawing away slightly from Sweetness. They reached the half in 1:10½. Around the turn they came in a string, but at the three-quarter mark Sweetness broke up and the colt began his chase after Nellie R. Sperry heard the long, steady stroke behind him and knew what was in the wind. He struck his mare two or three sharp blows with his whip, but she was done. Her speed and heart had both left her and Albert W swept past at a pace he had not before shown in the race, passing the stand winner by three open lengths, Nellie R second, Sweetness third. Time 2:22.

There was another revolution in betting. Nothing could be plainer to the habitue of the tracks than that the colt had the race cornered. In the pools it was three to one on Albert W against the field.

Fourth heat—Albert W showed the way to the quarter in 36½, but in the straight work broke up, and at the half in 1:11 there was a bunch with Sweetness first and Albert last. Around the turn he worked into second place and up the stretch beat Sweetness handily by three lengths, Nellie R third. Time 2:22½.

Fifth heat—Albert W went off first with Sweetness close up, Nellie R breaking badly at the first turn. At the quarter in 36½ and the half in 1:10½ the colt was leading with Sweetness on his wheel, Nellie R ten lengths behind. From there home the colt came at a steady clip, being practically alone in the race. He won the heat by six lengths, Sweetness second, Nellie R third. Time 2:24.

SUMMARY.

Saturday, September 23.—Pacific Coast trotting; 2:22 class; purse \$1,000, and \$200 added if more than ten entries. Four moneys.
A. Waldstein names b s Albert W, by Electioneer—by John Nelson..... 3 3 1 1 1
S. Sperry names ch m Nellie R, by General McClellan Jr..... 1 1 2 3 3
J. A. Goldsmith names b m Sweetness, by Volunteer..... 2 2 3 2 2
D. McCarty's b g Hancock, H. R. Covey's b g Capt. Smith, G. Bernard's g g Allen Roy, D. Mara's ch g Tump Winston, J. A. Goldsmith's blk s Director and W. D. Hammond's Poscora Hayward drawn.
Time—2:22½, 2:20, 2:22, 2:24½, 2:24.

The heats of two miles was for a purse of \$500, for the 2:30 class, in which Bullet, Freestone and Tump Winston were withdrawn, leaving the contest to Albert W and Vanderlynn, the betting being \$100 to \$30 in favor of the former horse. Vanderlynn took the lead and held it well to the half-mile post, when he got off his feet and commenced a succession of breaks that destroyed his chances, as on each occasion when he was getting down to his gait and diminishing the gap between himself and the leader, he would get again on the run, and thus enabled Albert W to jog in an easy winner in 5:04½.

In the second heat Vanderlynn was much steadier in his gait and he trotted the first mile without a skip in 2:24½, and passed the wire an open length ahead of Albert W, but on the first turn he made a break at the quarter. Albert W was in the lead, but near the half-mile post he made a break and resigned his position to Vanderlynn, who, on the home stretch, trotting very squarely, looking like a winner, but Albert W came up with a fine burst of speed and carried Vanderlynn off his feet near the draw-gate, winning the heat and race in 4:51. This is another fine performance on the part of Albert W, and many good judges thought that with a good track this promising son of Electioneer would lower the best record at the distance, namely that of Steve Maxwell, 4:48½, made at Rochester in August, 1880.

SUMMARY.

San Jose, October 2.—Trotting for the 2:30 class, heats of two miles; for a purse of \$500.
A. Waldstein names b s Albert W, by Electioneer, dam by John Nelson..... 1 1
P. Farrel names b h Vanderlynn, by George M. Patchen, dam by Joseph..... 2 2
Bullet, Freestone and Tump Winston were entered but did not start.
Time—5:04½, 4:51.

Although some of the following matter has been printed before, the history of Albert W would not be complete without a more extended history of the paternal side of the house.

Though Electioneer has never trotted in public, he gave evidence of possessing his share of the well-known speed of the family, and it was only the "worst run of bad luck" imaginable which prevented him from leading the noted progeny of Green Mountain Maid, great as the feats of Prospero, Dame Trot, Elaine, etc., have been. Probabilities, however, are not required, and the glory which Electioneer has obtained through his progeny is far beyond what individual capacity would merit, though that capacity were of the highest class. Individual merit in horses ends with the active life of the performer. He who has the faculty of perpetuating the desired qualities lives in future generations, and in the case of the horse under consideration there are already so many of his sons and daughters which are endowed, that it is sure he will take the place of a founder of a family, and the Electioneers be known through several generations by this distinctive appellation. Even when broken up into several branches the "head of the clan" will be remembered as the founder of the dynasty, and the banner emblazoned with the colors of the chieftain. As has been stated, there was a succession of prodigies to his credit after the fruits of his first season in California came upon the track. Though he had made some seasons in the East, he was so completely overshadowed, in the estimation of his former owner, by his stable companion, Messenger Duroc, that he occupied an inferior position. Not so humiliating as the Godolphin Arab occupied at Gog Magog, but restricted in his opportunities and his colts given no chance.

When Governor Stanford visited Stony Ford and the stallions were paraded for his inspection, his companions were enthusiastic over the fancy of the owner. Messenger Duroc was the only horse in the world, and to show another after

he had been on the stage was like displaying the daubs of a village potthouse in juxtaposition to a gallery of the grand masters of the art. He was not to be misled, however, by the acclamations. First he saw that the form of Electioneer was superior—much superior, according to his idea—and then the next thing to consider was the breeding. Both were by the same sire. Messenger Duroc's dam Satinet, by Roe's Abdallah Chief, and the dam of Electioneer was Green Mountain Maid by Harry Clay.

Messenger Duroc, at that time, owed all of his celebrity to Prospero and Dame Trot, both from the dam of Electioneer, and to Hogarth, the dam of which was also by Harry Clay. To a man who had a knowledge of breeding, in the habit of forming his opinions from his own knowledge, and not easily influenced by the enthusiastic notions of others, there could be little question when a choice had to be made, and though the "big horse" was priced at a figure at least four times as much as the other, the more highly formed and better bred was taken. Price had nothing to do with the choice. The intention was to buy the best, regardless of cost, and, fortunately for the breeding interests of California, the son of Green Mountain Maid was the selection. It is supererogatory to say anything of the sire of Electioneer, Rysdyk's Hambletonian. His fame is so great, and so deservedly great, that it cannot be questioned with any logical argument to support the questioner. His dam, Green Mountain Maid, stands so nearly at the head of the list of trotting broodmares that Miss Russell is the only one which can dispute the claim that she should be the premier. Prospero (2:20) Elaine (2:20) and Dame Trot (2:22) are a trio of jewels of which the highest might be proud. There are assuredly "speed lines" enough here to suit the most fastidious sticklers for this essential part of a pedigree, and to add still greater force we find that the second generation is likely, and we believe sure, to better the showing. We have not the least doubt that there will be grandsons and grand-daughters of Green Mountain Maid which will show far faster, and of this sort not a few.

For the proof, a brief recapitulation of what has already been done will be all that is necessary, and with that we will rest the case: On the Bay District Course, November 13, 1880, Fred Crocker was matched against 2:30. He then was a two-year-old, and had trotted a race in Sacramento, when he was beaten by Sweetheart in 2:31½, 2:32½. This he won very handily in 2:23½. One week afterwards he was again asked to beat his own time, and he accomplished it with a margin of 3½ seconds, placing 2:25½ on the blackboard. Sweetheart had trotted in 2:26½, and the performances by two California-bred two-year-olds set the Eastern world ablaze. The fastest time for years, and it still ranks the fastest time in that section, was 2:31, and to have it lowered so much was scarcely to be credited. There were chapters upon chapters in the Eastern papers. Some questioned the accuracy in the timing, others the length of the track, and never before was there such a hubbub unless, perhaps, when Goldsmith Maid trotted 2:17 in Milwaukee. Anno Domini 1881 increased the surprise, or rather so completely established the superiority of the California colts that the Eastern breeders were in dismay. At a meeting of an association, composed of the prominent breeders of the East, it was gravely debated whether the Occidentals should be barred, handicapped, or some other plan adopted which would save from impending danger. A resolution was offered that the distance should be increased to 220 yards in colt races, and then an amendment was offered that it should be 150 yards. The cause for all this tribulation was the trotting of another lot of two-year-olds, and was as follows: At the State Fair at Sacramento there was a stake for two-year-olds, the starters Wildflower by Electioneer, and Eva by Sultan. The latter was a sister to Sweetheart, Wildflower nearly a sister in blood to Fred Crocker, both of their dams being by St. Clair. Eva won the first heat in 2:33½, Wildflower the second and third in 2:33, 2:37. This was good, if not up to the standard of the preceding year, but the owners were well aware that it was well within the rate of the two fillies, and means were taken to put it to a test. The race at Sacramento was on September 22d, and on the Bay District Course on October 22d there were two prizes given for two-year-olds to beat the once celebrated time of So-So, 2:31. The track was in good order and the day fair. The attendance was good, a large number of those who take delight in the sports of the track, but who are prone to verify the time of the judges with their own watches. Wildflower came out first. She moved up and down the stretch a few times to "warm up," going so smoothly and easily that it was evident that 2:31 was nowhere, and someone sanguine enough to predict that the time of Fred Crocker might be equaled.

She started with the daisy-cutting stride for which she is noted, and the very best judge of speed, with his eye merely to guide, would have thought that a "forty gait" was about the measure. Thirty-five and a quarter seconds was the tale told by the watches when the quarter pole was made, and there were many of those who held timing watches who doubted the accuracy of the report and thought that their "old reliables" had failed them at a critical moment. Acting as Clerk of the course, which gave the best opportunity to see every portion of the track, and the position of the fractional posts being such that there is no difficulty in "catching the time" correctly, with as good a split-second watch as ever came from the hands of the best maker, we were prepared to be accurate, and from our coigne of advantage were prepared to verify the official time. Each of the judges had a watch, and the figures of the regular timers, stationed immediately opposite the judges' stand, agreed with ours as to

the fractions, and there was a remarkable unanimity in officials and "outsiders" regarding the time. But this break in the description is very different from the trotting of Wildflower. She swept down the backstretch at such a flight of speed that the galloper which accompanied her was put to a racing stride, and at the half mile 1:09 was the record. This was surely far too fast, and any animal not yet forty months old could not withstand the strain. There was a slight slackening of the speed around the further turn, whether owing to tiring, which appeared inevitable, or strategy on the part of the driver in order to enable her to come home, was, of course, unknown to the spectators. With all the evident slowing, she reached the three-quarters in 1:44½, and yet there was not the rush which marked her progress in the backstretch. Mr. Covey ran up the track shouting and signaling her driver to come on. He did not understand the mandate until nearly opposite the 150-yard mark, when for the first time she was touched with the whip. The response was such an acceleration of the rate that the "teaser" was forced to extend herself for the rest of the journey, and she swept under the wire in 2:21. The explanation of the slackening on the upper turn and down the stretch was this: Frank Covey drove the galloper, carrying a chronograph in his hand. When he saw that the half mile was made in 1:09 he was startled, and fearful that a break might render all that had been done of no avail. He was satisfied that any previous two-year-old time would be beaten easily if there was no mishap, and very judiciously he directed McGregory to "take a pull." It is unnecessary to speculate what would have resulted from a different course, and it is sufficient that the best time of the East had been beaten ten seconds, and when that time was "hung out" there was a shout which might have been heard in the city. There are few men who would have started another filly after such an exhibition of speed, but Mr. Rose, with the feeling of a true sportsman, determined that Evashould fulfill her part of the programme and a grand effort she made, accomplishing the mile in 2:26. On the 5th day of November there was another wonderful exhibition of speed by the youngsters. There were special prizes for yearlings, and after what the two-year-olds had shown, some were sanguine enough to predict that the time of Memento would be beaten. This grand record for a yearling was held so superlatively good that our old and esteemed friend H. B., of the *Turf, Field and Farm*, wrote that "it would be a long time before we saw such a wonderful baby trotter." Doctor Hicks' bay filly Pride, by Buccaneer, made the first essay, and left the Kentucky time 12½ seconds behind, trotting in 2:44½. This was a "hard stent," and as in the preceding day it took some nerve to make a trial after such a "breaking of the record." Mr. Covey, however, was not easily discouraged, and Hinda Rose, by Electioneer, her dam Beautiful Belle by The Moor, was selected to battle for Palo Alto. She proved victorious by the small margin of a second, 2:43½ being the mark. This disposed of the question that Electioneer could only get trotters from St. Clair mares, and when Arol, another yearling by him, with a still different cross in the dam, trotted a quarter in 41½ seconds, the "prepotency" of the sire was established.

On the same day there was a further exhibition of the quality of the stock of Sunny Slope and Palo Alto. Eva trotted a mile in 2:26½, and her two-year-old sister, Sweetheart, a mile in 2:22, only one second below that of the champion, Phil Thompson. We venture to say, quoting our old friend again, that it will be a long time before we will see sisters two and three years old which will show such time on the same day, or for that matter in the same season.

Five of the Palo Alto two-year-olds made an exhibition of a quarter of a mile. Three by Electioneer, two by General Benton. The two Bentons, Bonnie and Bertha, each made the quarter in 36 seconds, and the Electioneers as follows: Eros, 37 seconds; Bonita, 32½ seconds; Wildflower, 32 seconds.

It is not surprising that the Eastern people doubted the length of the track, the accuracy of the watches, the age of the colts. The wonder is that they did not set the whole thing down as a fiction, a moon hoax story, akin to the traveling stories of Gulliver and that all Californians were in a conspiracy of humbug with tales which underrate the common sense of any one who would give them credit for truth.

But on the 24th day of November was accomplished, in our opinion, the greatest feat of them all. Two medals were offered, the first being for a yearling that would beat 2:43½, the second for a two-year-old to rub out any record for that age, save that of Wildflower. The figures are the most eloquent commentary. The yearling, Hinda Rose, went to the quarter in 40½ seconds, to the half-mile pole in 1:18½, and made the mile in 2:36½. She made a break on the home stretch and the "middle half" was trotted in 1:15½. That a filly taking rank as a yearling, lacking several months of being two years old, should show so much speed and endurance, and speed especially, is the most marvelous illustration of the improvement of the American trotter which has ever been shown.

These were the doings prior to 1882, and though there may not have been quite as sensational feats as those in the record of 1881, enough was done to sustain the reputation of the tribe. Wildflower and Hinda Rose went East, winning their stakes in New York and Kentucky with comparative ease. In this country, outside of the doings of Albert W, were some notable performances. All of the starters in the Stanford stake were sons of Electioneer, and Adair from a daughter of Culver's Black Hawk was the winner, in the very fair time for a three-year-old of 2:34½. Clay won the second heat in 2:36½, so that both of these earned the title of trotters. In

the Embryo stake for yearlings Antevolo, by Electioneer, was second to Dawn by Nutwood. The winner made 2:59, the fastest time ever made by a yearling in an actual race, and the fastest record for a stallion colt. Antevolo is a late colt, having been foaled the 12th of May, and he was trotted barefooted. He was timed as the second horse in 3:02, which for a colt with only a little work and without shoes, tips, weights or boots cannot be called a bad showing. Since the date of the Embryo, and still barefooted, he has shown quarters at a "fifty gait," and a half mile in 1:28. Finishing with this short sketch, we must say that we have great expectations of the Electioneers in the future, and feel confident that they are likely to reach the topmost round in the ladder of fame.

English Opinions of the George-Myers Contest.

The London *Referee* thus discourses of the races between the English and American Champions:

George and Myers ran their three-quarter mile race on Thursday, with the result already foreshadowed in these columns. For some little while another postponement had been anticipated, not this time because of the unfitness or unwillingness of either man, but because of the unfavorable weather. On Wednesday New York was favored with a heavy snowfall, besides which the cold was intense. A wire sent by George to his friends in Birmingham states that there were twelve inches of snow on the ground last Wednesday; therefore no one on this side need have been surprised at the news of the race having to wait a more favorable opportunity. But our American cousins are an energetic and courageous people, and they at once set to work to get the track into as good a condition as possible. Notwithstanding this, one of my advices states that the men ran on nearly half a foot of snow. How this was, unless the fall continued right up to within an hour or so of the race, must be left for the next mail to explain. What we know will serve for the present, and will enable us to understand why, although the contest was for a good part of the way close and exciting, the time was nothing near that which has been talked about. I have been credibly informed during the week that what has been already stated here is perfectly correct, and that George can, given a good day and fair condition, run three-quarters of a mile in 3:4. Also those who know most about him feel certain that under the excitement of a public race—an excitement which always makes a really good man better than he is in his best trial—he would, if pushed by a worthy opponent, get well inside these figures. The time on Thursday was 3:10½, a result which, if it does nothing else, will help to show how much the excellence of modern cinder paths has to do with latter-day developments.

Men who used to run anything over a sprint twenty or thirty years ago might have thought the track on which George and Myers contested good enough for the purpose, notwithstanding the snow which lay so thick upon it. On the other hand, the clocking was in the days of Plancus and Seward as loose and untrustworthy as the tracks themselves, and whenever required was as much in the man's favor as the ground was against him. Still, 3:4 is very marvelous, especially when it is remembered that the present professional record was made in comparatively recent days upon a ground which was considered a very miracle of excellence; that the man who made the record was undoubtedly well served by the distance, and just as undoubtedly the best man of his day at it; and that he was "all out" at the finish. Next year perhaps George may be induced to give us in London a display of his best quality at three-quarters of a mile, unless he, disgusted at what has happened to him in America, retires from pedestrianism altogether. Should he elect to continue his career he will have a good opportunity given him of showing us what he can do. Myers has expressed great anxiety to come here again, and, properly trained, recommence conclusions with George. What is more, one of Myers' staunchest supporters has pledged himself to pay all expenses, travel with him, and carefully look after his interests.

Notwithstanding his victories, George's recollections of America are bound to be anything but pleasant. When it was first stated that he had definitely determined to go out and meet Myers on his own ground, I foreshadowed the unpleasantness that was imminent, and have since been grossly abused for my pains. Yet I never for one moment imagined there could be anything like the unpleasantness which has actually resulted. George having spoken his mind too freely when Myers declined to run the three-quarter mile race as originally arranged, was pulled up with a round turn. He all at once discovered he was in a country where freedom of speech is only allowed those who belong to the establishment. A week ago the *Referee* informed its readers that George had, in messages to his friends on this side, expressed a strong and undoubted opinion about Myers' treatment of him. Similar remarks to those which George made by means of the cable he made in the ear of a reporter, never dreaming that they would be taken down and used as evidence against him. To his intense astonishment, the following morning there appeared in the black and white of the leading New York newspaper the words which he had used in a moment of indignation—words which he would probably never have uttered had he weighed them over. The day afterwards George issued a denial, the spirit of which was that first he did not use the words attributed to him; and second, if he did, he did not mean them to be taken to the foot of the letter. The effect was the same nevertheless, and the Manhattan Club having taken serious umbrage, sternly refused George's offer to run Myers on Thanksgiving Day (the 30th) unless he apologized unconditionally. They said: We have conceded Mr. George the medal which he so much required, and now we will have no more of him. Among the wicked expressions George had to admit having made was one to the effect that he did not believe that Myers was ill, as he was out and about, and looked as well as ever. Another charge against him, and one he could not evade either, was that he had called the members of the Manhattan Club "a mean and unmanly lot."

A new horse disease has made its appearance at Stockton which baffles all the veterinary surgeons. One man who lost several head of horses had the body of one of them examined and found a bucketful of pure sand in the paunch. Others were then examined, with a like result. The early rains started the grass and the subsequent drought has made feed short, so that, in nipping it off, sand has been taken up by these horses in such quantities as to cause death.

There are still large areas in Texas near the Mexican border that are not inhabited except as they are ranged over by stock men with their herds. These men are, however, up with the times in securing the best blooded Shorthorn stock to improve their cattle.

San Francisco, Saturday, December 30, 1882.

Mr. M. J. Henley is a duly authorized traveling agent and correspondent for the "Breeder and Sportsman."

A HAPPY NEW YEAR.

That there may be prosperity, prime condition, physical and mental, philosophic determination to make the best of every situation, looking for the bright lining in every cloud, however somber the hue of that which is visible; many, very many happy years without a break from January until January again to all of our readers, and every one else for that matter, is the sincere desire of the *Breeder and Sportsman*.

At this time, the starting point for another year, it may not be out of place to declare our intentions, and to indicate what will be the course in the future. Assured of the aid of friends who have done so much in the past, and with the potent auxiliaries of the corps to assist, we have not the least fear of the capacity being wanting to make a good race. The course we have marked is in some respects different from any other journal in this country.

While legitimate sports of all kinds receive attention, it is not the purpose that these shall exclude other matters. The turf and track are important in more respects than offering the means of recreation, although they are well worthy of being sustained on this account alone. The history of the world teaches that out-door sports are a protection against habits which are sure to demoralize communities as well as individuals, and the downfall of nations commences when the people become too effeminate to enjoy and take part in the pastimes that can only be indulged in the open air. Racing, and in America trotting, carry more with them than the witnessing of contests. There is not merely a great moneyed interest at stake, not only the welfare of the breeder to guard, as the community is more or less interested. Every man or woman who rides or drives has a direct interest in the improvement of the animals they use, and it is generally admitted that the course and track are absolute necessities to guide the breeder in his choice of sires and dams the best adapted to produce the highest types of the horse. Racing and trotting in themselves receive the sanction and are upheld by the best and the wisest, and it is only the excrescences that are denounced. It is true that there are bigots who see vice in any amusement, and who are so austere and fanatical they rail against everything which is above their gloomy comprehension. They hate the sunshine and revel in gloom. They prefer the fogs to the dew as it sparkles on the grass, and they would blacken the hues of the rainbow so that it might be in accordance with their somber ideas. Their journey through life is like a pilgrimage in a cypress swamp, loathing the bright paths where the sun brings verdure and flowers, to wade in malarial pools, dark and dismal as their hearts.

To them the great Creator erred when he made this earth so beautiful, and they picture a Deity who delights in human suffering, and who frowns at any enjoyment, and punishes the gratification of desires, however innocent, remorselessly.

For this class we do not labor. But for the other which fortunately is growing larger as the gloom of bigotry, intolerance and superstition gives way before the light of progress, we are willing to do all in our power to remove the incumbrances. Cheerfully, gaily we will bend to the work to aid in eliminating every objectionable feature from the most popular of all recreations, and hereafter, as in the past, the *Breeder and Sportsman* will do its utmost to elevate the sports the people take delight in. Although there is not a tithe of the rascality

that is supposed to mar the pleasures of turf sports, there are occasional wrong-doings, and not as high a standard of morality among some who are prominent. Our aim shall be to castigate, irrespective of position, those who are found to be guilty, and inculcate to the best of our ability the importance of being guided by the most ultra-"old-fashioned" ideas of honor in those who participate. We would have a loftier plane observed than honesty. A line of conduct in all pertaining to the turf, that shall be akin to that which was the governing motive in men of the halcyon days when the thought of a dishonorable action was too revolting to be entertained for a moment.

When a violation is followed by complete ostracism from the society of the "good and true" there will be no repining over the "decadence of the turf." There will be thousands to attend the meetings in place of hundreds, and in lieu of obloquy attending the ownership of horses kept for track uses, it will be part of the state and equipment of a gentleman to support a stable for the gratification of the public.

While, as has been stated before, due prominence will be given to the actual trials on course and track, the breeding interest will not be overlooked. In fact, we hold this of paramount importance, and shall do our utmost to make this journal an ally to the breeder which he can welcome. Breeding, rearing and training horses is an art, and to be successful the subject must be studied. Every department of horse breeding comes under this head, and whether for the course, the track, the road, "all-work," or heavy draft the breeder who reads, thinks, and who practices what he has derived from reading and study will be far in advance of the one who depends on chance to help him out.

To aid us in teaching this important branch of rural economy are the admirable correspondents in all sections of the country and an exchange list containing nearly every prominent paper of the class printed in the English language. An experience of thirty years gives us confidence, and though it may appear egotistical to make the claim of possessing rather more than a fair knowledge of whatever pertains to the horse, it could hardly be otherwise than that the lessons following practical results should have taught us things an acquaintance with which may benefit others. In that time we have bred, reared and trained race-horses, trotters and roadsters with a fair degree of success, and we have closely watched and carefully studied the methods of others. Following a natural bent it has been the main study of life, to the exclusion of nearly everything else, and the mysteries of breeding, stable economy, training, etc., pondered over for more than a score of years. During that long time many experiments have been tried, and very many of them were failures; the failures added to the store of available knowledge, and the success demonstrated the value of forsaking the old grooves. But fortunately we are not confined to personal knowledge. The correspondents of the *Breeder and Sportsman* are practical, intelligent men and peculiarly "well up" in what they write about.

Our exchange list gives us the benefit of the accumulated wisdom of more than one hemisphere. We draw largely on that source, and our readers have expressed a general satisfaction with the articles copied.

There is an immense field from which to select, and one that has almost boundless resources. It is far more extensive than an individual would suppose. Westward the Hawaiian Islands, Sydney, Melbourne, and other portions of Australia, and still on to Calcutta, East India. Eastward across the American continent, Great Britain and Ireland. On the north it extends to the Arctic, south to the Gulf of Mexico. In making use of the advantages which this chance for selection gives it practically affords our readers the benefits of hundreds of papers, and while, of course, we present a large amount of original matter, we are not restrained from copying whatever is of the right stamp.

The *Breeder and Sportsman* is not confined to any one "specialty." Though the breeding of horses of the various grades is one of the most important of the pursuits of the agriculturist, every department of breeding cattle, swine, sheep, poultry, will receive due attention, and whatever is of interest to the farmer in all of these branches will have the fullest consideration. The grand object is to make this paper a welcome visitor to country, city and village, and the path that we have marked lies entirely in that direction.

All of the sports of field and water are embraced, and the scope is sufficient to cover whatever is legitimate in these fascinating recreations. A reference to the index to volume first, published in this number, will give an idea of what has been done, and with the assurance that there shall be no lack hereafter in these essential departments.

The aim is to publish a paper, in many respects, different from any other in the United States. Not entirely a turf paper, or journal of sport, but a combination of recreation and instruction, an upholder of that which is conducive to true sporting interests, and a castigatort of those that would lower them to a grade which would insure the disapprobation of the right sort of people. The intention may be epitomized into a few words, and these are that no pains will be spared to make the *Breeder and Sportsman* essentially such a paper as the name implies, and without a line which will be repugnant to "good breeding" or honest purpose.

TIPS—ORIENTAL AND OCCIDENTAL NOTIONS.

On this side of the continent trainers who have seen tips tried are willing to admit that they are an advantage to the feet and legs but they claim that they are a drawback to trotting speed. From the following copied from the *Turf, Field and Farm* of December 15th, it will be seen that Hamilton Busbey does not agree with this view. This is the extract:

After reading the card and promising to publish we asked to see Algate. She stepped from her box with shoes partially off, and under the standard she was 16 hands. She is a bay with snip and white hind ankles and was foaled April 18, 1879. Her sire was Cuyler and her dam Haroldine, by Harold; second dam Missouri, by Mambrino Chief, and third dam by thoroughbred Woodford. She is a rangy and somewhat leggy young mare, with good countenance and is easily controlled. She wore tips on her fore feet in all of her races, and it is a wonder that they did not break her down, because they are the worst thing that a trotter, young or old, can wear, especially on a hard track. Mr. Davis thinks that she would have trotted in 2:20 at Chicago, the day she made her record of 2:25, had weather and track been good. On her return to Glenview she was timed a half mile in 1:08. It will be worth something to see her in a race with Wildflower and Alroy next year.

It is evident that when a three-year-old filly obtains a public record of 2:25, and makes half a mile in 1:08, wearing tips, the California estimate will not hold good, so that one or other must be in error. We have the fullest faith that either view is erroneous, and are satisfied beyond the shadow of doubt that "H. B." is wrong. There is certainly nothing in theory to substantiate the ground that there is a liability to break down, in fact reasoning from a pathological position there is not nearly so much strain on the tendons, and, consequently not nearly so much danger of lesions or ruptures of the sheathing. That is when tips are properly "set." With the tip or lunette shoe, whichever name is used, inbedded into the horn so as to give the proper and equal bearing, there is a closer following after nature, an adaptation of her teachings, while at the same time we guard against an undue wear of the horn. The only chance to have an argument on anything like tenable grounds would be that the extra weight on the anterior portion of the foot entailed a risk. That does not follow. A full shoe, of average weight for a trotter or road horse, say sixteen ounces, will have three-quarters of the weight in the section corresponding to a tip, such as we use, so that there will be an excess of weight of eight ounces over the part which is posterior. Then after allowing for the balance of the rear four ounces, there will be a surplus greater than the whole weight of the tip, as seven ounces is the heaviest we have used for some time, and most of them under six ounces, some that were only four ounces.

But practice is of more value than theory though that sustains the hypothesis of greater safety emphatically so far as our experiment extends.

Anteo has never worn a shoe on his fore feet. Tips were put on when he was fourteen and a half months old, and owing to his peculiar disposition his work has been of a nature to be very trying on his feet and legs. Now at three years and a half his legs are as "clean" as can be, and his feet are simply perfect. As we will continue his history from the time of the last illustration, giving a full account of his work, showing, etc, it is unnecessary to give it so briefly as it would have to be done at present, and then it will be known that, if tips were likely to cause breaking down, he should have succumbed long ago. We are greatly pleased to learn that Algate so substantially indorses our views regarding the use of tips on trotting colts.

The nearly universal practice of training race horses barefooted demonstrates that in the case of the galloper, shoes are superfluous and not only superfluous but dangerous as more "break-downs" were met with than at present. With both theory and practice to prove to the contrary, the claim that "it is a wonder that they did not break her down, because they are the worst things that a trotter, young or old, can wear, especially on a hard track," would be absurd were it not that so little is known about tips and the effects which follow the use of them. As Algate has done so well, however, it is not likely that Mr. McFerran will give them up until there are more than predictions against the usefulness.

THE STANFORD STAKE FOR 1883.

The second payment of \$100 in the Stanford Stake of 1883, must be made on or before the first of January next. A failure will be a forfeiture of the previous payment.

The race is fixed for the third Saturday in October, 1883, on the Bay District Course, and should that track be not obtainable at that date, the managers will select another of which due notice will be given. In case the "day and track" are not good on the day selected, the trot shall come off on the first Saturday thereafter when the day and track are good, unless that should be the first Saturday in November, when the Embryo Stakes are to be trotted.

H. M. LA RUE.

Although ignoring a majority of questions that may be termed political, it certainly comes within the scope of the *Breeder and Sportsman* to support everything which has a tendency to benefit the breeder, farmer, horticulturist, etc. There are questions of vital importance to all of these classes arising at every session of the Legislature, some of them of the greatest moment. The Speaker of the House is in a position to be of the greatest service and believing that the interests depending will have a staunch supporter in H. M. La Rue, a candidate for the place, we take pleasure in doing what we can to aid in his election. He is a true farmer, practical, thoroughly acquainted with everything pertaining to the business in California, and with a clear comprehension of the effects of legislation. He has proved himself to be a man of executive ability in his management of the California State Agricultural Society, and his integrity is not disputed even by those who are in opposition. There may be other aspirants having equal claims, but of all the members elect of the next Assembly with whom we are acquainted, Mr. La Rue is our first choice.

We also learn that Edwin F. Smith, the efficient secretary of the California State Agricultural Society, is a candidate for Secretary of the Senate. There could not be a better man for the same position, and we sincerely trust that California will be fortunate enough to secure the services of these gentlemen.

OCCIDENT AND STOCKTON STAKES.

There also close on the first of January the Occident Stakes, and on February 1st, 1883, the stake for two-year-olds to be trotted at the San Joaquin Fair. The Occident is for foals of 1881 to be trotted when three-year-olds, the Stockton for foals of the same year to be trotted when two years old. The Occident is \$100 each, \$25 to accompany nomination, \$25 on the first of January 1884 and the remaining \$50 thirty days before the time fixed for trotting.

The same amount must accompany the nomination in the Stockton Stakes, \$25 additional to be paid July 1st. In the Occident a gold cup of the value of \$400 is added; at Stockton \$500 in money is added to the stake, \$100 of which is awarded the stallion whose get wins first money. Thus there are two stakes closing on the first of January next for foals of 1881, viz: Stanford and Occident, and the Stockton Stakes, as stated before, on the 1st of February.

Inasmuch as the latter has no distinctive name, we would suggest that it be named after the first winner of the stake. There is little necessity for urging the owners of colts to enter into engagements, as the advantages are now generally recognized. The advertisements of the Stanford and Occident Stakes give full particulars.

THE FIRST RACE MEETING IN SAN FRANCISCO.

There is scarcely a doubt that the meeting, an account of which will be found on another page, was the first ever held in California. It may have been that there was a prior meeting in Sacramento, as we have seen a notice that one would be held in October, 1850, though we have been unable to find any account of it. A discrepancy will be noticed in the distance and time of the first race. In the "summary" the distance is given "mile-and-a-half heats and the time 1:50½. If the distance is correct 2:50½ must have been the time; if the time is right, heats of a mile must have been the distance. The Fall meeting on the same course commenced on August 7th, and on September 18th, 20th, and 21st, there was a meeting on the Brighton Course, Sacramento. At that there was a match of \$10,000 between Ito and Black Swan, the former being the winner. The race was heats of a mile, though the time is not given, Black Swan drawn after the first heat. There were races at Stockton the same fall though a match for \$600, in which Sam Gustine beat Blue Crane in 1:52½ is the only record at hand.

When there is more time to go over the old files and space to do justice to the subject we will continue the history of the turf and track in California. There are interesting episodes in the early days of these sports on this coast which cannot fail to be attractive to old residents and new-comers. There is a great deal of the romantic in anything pertaining to the "good old days," and the sports of Turf, Track, Field and Flood were not exceptional in this respect.

FROM AUSTRALIA.

In addition to the news from our "regular correspondent" at Sydney we have received several private letters, all of them containing a good deal of sporting and other news of interest to our readers. We will make these the subject of an article in the paper of next week, and at the present time return our sincere thanks for the good wishes expressed. It will be seen that Honesty arrived

safely at Sydney, and that he stood the voyage "like a trump." As the big trotting race has been postponed until March, there is plenty of time to make other shipments with a chance to participate. California breeders will lose a favorable chance if they omit to do all in their power to further trotting interests in that country.

THE STANFORD STAKE FOR 1884.

This popular trotting stake for foals of 1881 will close on the first of January next, and there are so many promising colts of the age in California that there should be a full list of nominations.

The conditions are \$300 each, \$100 of which must accompany the nomination, \$100 on the first day of January, 1884, and the remaining \$100 thirty days previous to the day set for trotting the race. That is to be heats of a mile, best three in five in harness, the day not earlier than the latter part of August, the day to be fixed on or before the first of January of the year of trotting.

That the colts and nines which have shown so well will be engaged, and these reinforced by the dark division, will present an array of names, and the potential backing of the right sort of breeding, assures a large amount to the winner. A yearling of promise that secures an engagement in this stake is increased in value to an extent that will warrant the outlay, and therefore it can scarcely be otherwise than that there will be a liberal response.

Nominations can either be made to N. T. Smith, Fourth and Townsend streets, Treasurer, or to Jos. Cairn Simpson, 508 Montgomery street, Secretary. Under the new rules adopted by the National Trotting Association at the last convention, a letter containing the nomination, legibly postmarked, not later than the day of closing, will be eligible. The description and pedigree should also be given.

EDITORIAL NOTES.

The difference between the drivers of trotters is well exemplified in the *Breeder's Gazette*. A series of articles appeared in that journal written by P. V. Johnson and not long ago we took pleasure in complimenting the author. They showed a manly, straightforward motive and were readable and instructive. In the same paper there is in course of publication something of the same kind of articles by George W. Saunders, and we are forced to take very different ground. He writes: "At the first named place (Freeport) I got second money with Newborn, Matt Kirkwood winning the race, although my horse could trot all around him that day. The next week I started Newborn at Prophetstown, and on the day of the race he could fairly fly, and I tried to knock down all of the posts on the outside railing of the track to keep from winning. I did not want a record on the horse just then." A self-convicted swindler, and it is astonishing that such should ever have horses put in their charge. The National Trotting Association must adopt a rule at the next convention that will put an end to that sort of writing or talk. Whenever a driver claims to have lost a race purposely, that he could have won, expel him and keep him expelled. If he is guilty as he pleads he certainly deserves punishment; if he falsifies he is richly entitled to the penalty for doing all in his power to bring the sport into disrepute. We shall insist that in order to relieve the track of such a dead weight the association take cognizance of this. If it fails a premium is awarded to rascality, and it makes itself a party to the fraud.

Boys in Trouble.—The lithograph from the original painting by E. Wyttenbach is so expressive that it does not require a word of comment. It is, in fact, so admirable that we think our readers will heartily agree with us in this estimate.

Trotting Rules.

The following code of rules was approved by the annual business meeting of the National Association of Trotting Horse Breeders, held December 13, 1882:

Rule I.—Sec. 1. All nominations shall be in writing, in the name of the owner, addressed to the Treasurer, inclosed in a sealed envelope, and plainly marked "Nominations," with a bank draft, postal order, or certified check for the amount of first payment; which envelope must bear the post mark of not later than the day upon which the Stake closes. A nomination by telegraph received by the Treasurer before the hour of closing, and confirmed by a properly written entry, as above prescribed, posted not later than the following day, shall be deemed valid.

Sec. 2. The number of nominations by one owner is unlimited, but only one can start in a race.

Sec. 3. Nominations shall state the name, color, marks, age and sex, whether horse, gelding or mare, and the names of the sire and dam, if known, and her sire, if known.

Sec. 4. Nominations shall follow the ownership of the horse, provided notice of change of ownership shall be forthwith filed with the Secretary.

Sec. 5. All entries shall close at midnight of the day named, at the office of the Treasurer, unless otherwise provided.

Sec. 6. Only horses owned or bred by members, or the get of stallions owned or stood by members, shall be eligible to entry.

Rule III, Races.—Sec. 1. All races to be in harness, mile

heats, best three in five, except for three years old and under, which are to be mile heats, unless otherwise provided in the first announcement of the Stake.

Rule IV, Division of Money.—Sec. 1. If three or more horses start in a Stake race, two-thirds of the Stake shall be awarded to the winner, two-ninths to the second horse, and one-ninth to the third horse, except otherwise provided in the published conditions of the race. If not more than two horses start, only first and second money shall be awarded; and in case of walks-over only the first money shall be awarded, and it shall be optional with the Executive Committee whether the horse shall or shall not appear.

Rule V, Distance.—Sec. 1. A horse distancing the field shall only be entitled to so much of the money as the starters in the race could have won.

Sec. 2. In all races best two in three, the distance shall be eighty yards; and in all races best three in five, the distance shall be 100 yards; except in heats wherein eight or more horses start, and therein the distance shall be 150 yards.

Rule VI, Judges.—Sec. 1. The Executive Committee shall appoint three Judges of each race, who shall give notice from the stand ten minutes before starting the race, and five minutes before each heat thereafter.

Sec. 2. No person except the Judges, the Clerk of the course, his assistants and the timers of the race, shall be allowed in the stand during the pendency of a heat.

Sec. 3. The Executive Committee shall appoint a District Judge, and whenever requested by the Judge of the race, shall select one or more patrols.

Sec. 4. The Judges of the race shall have power and control to determine all matters in respect to the scoring and driving of the race, and its conduct after the appearance of the horses upon the course; and may for the violation of their orders, or for any unfair or improper conduct on the part of the owner, driver or his assistants, impose fines and punishments as hereinafter prescribed; and may charge the rider or driver of any horse which in their judgment is not being ridden or driven to win.

Rule VII, Fines and Punishments.—Sec. 1. For failure to obey the directions of the Judges during the progress of the race, a fine of not more than \$100 nor less than \$5 for each offense, to be paid at once.

Sec. 2. For foul driving, disorderly conduct, profane, abusive or vulgar language, and for collusive or fraudulent driving, a fine as above limited; distance, suspension and expulsion, or any or all of such punishments.

Sec. 3. No suspension or expulsion shall be valid, unless the ground thereof shall be at the time recorded by the Clerk of the course, in the record of the race, and signed by the Judges.

Rule VIII, Timers.—Sec. 1. Three or more persons shall be appointed by the Executive Committee as timers of each race, who shall time the first and second horse in each heat; and the time of the winner of each heat shall be duly recorded; the time of the winners of a dead heat shall also be duly recorded, and the time of the second horse shall be recorded for reference.

Rule IX, Starters in Heats.—Sec. 1. In races of heats best two in three, a horse not winning once in three, nor making a dead heat, shall not start for a fourth; in races of heats, best three in five, a horse not winning a heat in five, nor making a dead heat, shall not start for the sixth; and a horse not placed at the finish of a race shall win no part of the stakes.

Sec. 2. Whenever each of the horses making a dead heat would have been entitled to terminate the race had he won said dead heat, they only shall start again.

Sec. 3. A horse prevented from starting by this rule shall not be distanced but ruled out, and shall be entitled to a share in the stake according to his rank at the close of his last heat.

Rule X, Time between Heats.—Sec. 1. The time between mile heats shall be twenty minutes, and in mile heats, best three in five, twenty-five minutes; in two mile heats, thirty minutes; in three mile heats, thirty-five minutes, and in four mile heats, forty minutes.

Rule XI, Progress of Races.—Sec. 1. Only two races shall be in progress at one time.

Rule XII, Placing Horses.—Sec. 1. In deciding the rank of horses other than the winner, their relative positions in each heat shall be conclusive, except when two or more appear equal in the race, their rank shall be determined by their position in the last heat.

Rule XIII, Postponement.—Sec. 1. In case of storm or darkness the Executive Committee or the Judge of the race shall have power to postpone the same until the next good day and track, either before or after the race has commenced.

Rule XIV, Weights and Weighing.—Sec. 1. The weight in races shall be 150 pounds, and shall be ascertained before and after each heat by the Clerk of the course, and no rider or driver shall dismount without the permission of the Judge; and any rider or driver not carrying the required weight shall be distanced, except the omission shall be fraudulent or shall be caused by some accident during the heat or through the error of the Clerk of the course.

Rule XV, Length of Whips.—Sec. 1. For saddle, two feet ten inches; sulky, four feet eight inches; wagon, five feet ten inches; teams, eight feet six inches.

Rule XVI, Starting Positions.—Sec. 1. The positions of horses starting in a race shall be assigned by the Judges as ascertained by lot, and thereafter according to their position at the finish of each heat.

Sec. 2. Positions may be changed during the heat in the discretion of the driver, provided such change shall cause no interference, except that after the horses shall have taken their position in the homestretch, they shall not be changed unless to pass another.

In case of accidental interference with another horse, by change of position, the horse so interfering shall be penalized by loss of the heat or of his position, and in case of intentional interference, the horse so interfering shall be distanced and the driver shall be punished.

Rule XVII, Breaking.—Sec. 1. No horse shall go in a race any other gait than a trot; if through the fault of the driver the horse takes any other gait, he shall be distanced; if without the fault of the driver, the horse so often takes another gait than a trot, or on taking it continues it so far as to render the contest unfair, such horse shall be distanced.

Rule XVIII, Age.—Sec. 1. The age of a horse shall be reckoned from the 1st of January of the year of foaling.

Rule XIX, Appeal.—Sec. 1. Any party aggrieved by a suspension or expulsion may appeal from the decision of the Judges to the Executive Committee. Such appeal may be taken by serving a written notice, within ten days after the event, upon the Secretary of the Association, specifying the matter sought to be reviewed and the error complained of; provided, a written protest shall have been filed with the Clerk of the Course within fifteen minutes after the conclusion of the race, and provided also one member of the Executive Committee shall certify in writing upon the notice of appeal, that in his judgment there is good ground therefor.

THE KENNEL.

National Club Field Trials.

The fourth annual field trials of the National American Kennel Club commenced at Grand Junction, Tenn., Monday morning, December 4, at 9:33, and terminated on Thursday afternoon, December 7, at 5:15—just four days, the shortest time in which a field trial, with the same number of entries, has been run.

The same ground was run over as last year, and although twice as many beves of birds had been located previous to the trials as last year, yet they were more difficult to find this year, in consequence of the very thick cover, owing to the rank growth of weeds and grass, produced by the frequent and heavy rains during the summer, and the late frost in the fall. Moreover, the weather, taken as a whole, was very unfavorable for good scent; consequently the test of nose was severe.

Mr. Wilson having been prevented by business engagements from being present, Major J. M. Taylor, of Lexington, Ky., was substituted for him, to judge with Dr. Young, of Corinth, Miss., and Captain W. H. Key, of Florence, Ala. On Tuesday night, Major Taylor was compelled to go home in consequence of the illness of one of his children, and Captain Henry was substituted for him, to judge with Dr. Young and Captain Key the unfinished heats of the Free For All, and the Derby.

Some very fine points came up for decision during the trials which could be correctly decided only by men educated up to the highest standard of field work, which the judges proved themselves to be, by deciding promptly and correctly in each instance.

The Free For All had eighteen entries, and was won by D. Bryson's black, white and tan setter bitch, Sue, by Druid—Heller's Ruby. Druid by Prince—Dora; Ruby, by Rake—Fanny; Rake by Llewellyn's Dan (Duke—Rhoebé) out of Ruby, by Statter's Fred—Rhoebé; Fred by Rock—Belle II. Fanny, the dam of Ruby, is by Leicester—Dart; Leicester by Dan (Duke—Rhoebé) out of Lill II, (Dash II, Old Blue Dash—Lill I) Dash II by Sting—Cora II; Lill I by Rock—Belle II. Dart, by Prince (Dash II; Old Blue Dash—Moll III) out of Dora, (Duke—Rhoebé), Moll III by Fred I—Belle II. This is Sue's second appearance in public, she having first run in the Free For All Stake of the National American Kennel Club's field trials on prairie chickens, at Fairmont, Minn., last September, when she was awarded four-fifths of the second prize, Dashing Novice receiving the other fifth, the first prize having been won by the pointer dog, Don. Sue has not a bench show record, never having been exhibited. The second place was won by Peep o' Day, (the winner of the stake last year) also the property of D. Bryson, Memphis, Tenn. Peep o' Day is a blue Belton setter bitch, whelped April 23, 1879, and is by Gladstone—Clip; Gladstone, by Dan (Duke—Rhoebé) out of Petrel; Petrel, by Prince (Dash II; Old Blue Dash—Moll III) out of Lill II (Dash II, Old Blue Dash—Lill I) Clip is by Leicester—Dart. For the full pedigree of Leicester and Dart refer to Sue's pedigree above. This is the third time Peep o' Day has run, and each time she has been placed. When a puppy she ran in the First American Derby, at Vincennes, Ind., 1880, when she divided third with Count Nailer, May Laverack and Bruce, Count Noble winning first and Daisy Laverack second. She next ran in the Free For All, at Grand Junction, last year, which she won, Sanborn's Nellie winning second, and Breckenridge and Ladd dividing third. Peep o' Day's bench show winnings are: Native English setter bitch class, St. Louis, 1880; champion English setter bitch class, Pittsburgh, 1881, and 1882. The third place in the stake was divided between Carrie J and American Dan. Carrie J is a good sized and good looking blue Belton setter bitch, owned by W. B. Gates, Memphis, Tenn., and is by Count Noble—Peep o' Day. Count Noble is by Count Wind'em—Nora; Count Wind'em is by Count Dick—Phantom; Count Dick is by Dan (Duke—Rhoebé) out of Countess (Dash II, old Blue Dash—Moll III); Phantom is by Prince—Lill I; for pedigrees of Prince and Lill I, see pedigree of Sue. Nora is by Dan, the sire of Count Dick, out of Nellie, sister of Countess and Prince. This is the first time Carrie J has run in public. She won first in English setter bitch puppy class, Pittsburgh, last March. American Dan is rather a large dog, black, white and tan, and very handsome. In style and action he resembles very much his illustrious sire, Lincoln, and in markings, his grandsire, Llewellyn's Dan. American Dan is by Lincoln—Daisy Dean; Lincoln is a brother of Leicester, to whose pedigree above refer for Lincoln's pedigree. Daisy Dean is by Pride of the Border out of Ruby, imported by Dr. J. H. Gantier of New York, the first Laverack setter imported into America, and afterwards owned by Mr. Charles H. Raymond, Morris Plains, N. J., who bred Daisy Dean. Ruby was red, but the distinctive shape of an English setter, and not that of an Irish setter; she was by Mystery out of Cora; Mystery by Jet (Fred I—Belle II) out of Duchess (Sting—Cora); Cora by Dash II, Old Blue Dash (Sting—Cora II) out of Moll III (Fred I—Belle II). This is American Dan's second appearance, he having run in the American Field Derby, on prairie chickens, Fairmont, Minn., last September, in which he won third, Prince Noble winning first, Pink B second.

The Third American Derby was won by Carrie J, whose pedigree is given above. Pink B won second place, and Bessie A third place. Pink B is owned by W. P. Mallory, Memphis, Tenn.; is a black and white setter dog, and is by Gladstone out of Countess Key. As mentioned above, he won second in the American Field Derby, Fairmont, Minn., last September. Bessie A is owned by J. M. Avert, Hickory Valley, Tenn.; is a white and lemon setter bitch, small, but very fast, and is by Dashing Lion—Armdia. Dashing Lion is by Dash II (Blue Prince—John Armstrong's Kate) out of Leda, sister of Leicester and Lincoln. Blue Prince, by Pride of the Border—Nellie, sister to Countess; John Armstrong's Kate is by old Blue Dash, out of Edward Armstrong's Kate, sister to Duke. Armdia is by Leicester—Pocahantas, she by Adams' Rock out of Dora (Duke—Rhoebé) Rock by Field's Bruce (Dash II, old Blue Dash—Rhoebé) out of Llewellyn's Daisy (Dash II, old Blue Dash—Moll III).

We have taken great care in tracing the pedigrees of the winners, considering they afford one of the most thoroughly practical lessons in setter breeding possible, as it will be seen how they trace back through different sires and dams, and grand sires and grand dams to the same ancestors.

The dogs were all in good condition, especially those handled by Mr. Short, who was remarkably successful, he having handled Sue, Peep o' Day and Carrie J, the winner of first, second and half of third in the Free For All, and of Carrie J and Pink B, winners of first and second in the Derby.—*American Field.*

COURSING IN CALIFORNIA.

Reminiscences of Early Days—History of the Sport's Growth on the Coast.

New Year's Day is the time for retrospect and anticipation the time when we look back over the doings of the years that have passed and look forward to the bright and happy times we hope to enjoy in the future, and it was this custom that doubtless inspired the chief editor of the *Breeder and Sportsman* to demand of his admiring subordinate, the Kennel editor, as a New Year's contribution, a few lines about the past history of coursing in California and our anticipations for the future of that noble sport. We commenced to argue against the shortness of the notice, the lack of reliable data and our utter unfitness for the task of historian, but were cut short by the remark: "I have decided on the subject and you must do the best you can." So to do the best we can is all we aim at and we hope that our many shortcomings will be pardoned.

Naturally enough coursing in California commenced when the first greyhound that was brought here first caught sight of his natural game, a hare, or as they are called here, a jack rabbit. That is, always supposing that the greyhound was loose when the hare crossed his line of sight. Whether the first course in California resulted in a "kill" or not we do not know but incline to the belief that it did not, for the greyhound was probably too high in flesh or too low in strength after his long trip across the plains or around Cape Horn to be able to catch a cottontail, let alone a full grown hare. We are equally ignorant about the name of the first greyhound, or his owner, or the place where the first course was run and what troubles us more than our own ignorance is the fact that no one else appears to be any wiser. Along about the year 1854 greyhounds began to get quite common here and informal coursing matches were frequently held around the neighborhood of Dublin, Alameda, Newark and other places easy of access to San Francisco. These matches were run without much regard to rule or coursing etiquette, but were pleasant social gatherings, hugely enjoyed by those who took part. Among the earliest of California coursing men were John Scarlett, Nat Curry the gunsmith, and ex-Sheriff James Adams. Shortly afterwards there came on the scene Clem Dixon, who with a Scotchman's natural love of order, though Clem is really a North of England man with Scottish education, set about organizing the sport of coursing under the regular rules of the sport. When it came to making out the rules for judging, Clem found that there was not a copy on the Coast, and from memory prepared a set as near in conformity with the National Rules of England as a good memory and a deep love of the sport could make them, under these rules the first regular coursing match in California was run near San Jose, Nov. 30, 1867, under the auspices of the Pioneer Coursing Club of California No. 1, James Adams President, Clem Dixon Secretary. The hunt took place at Hastings' Ranch near Bay Point in the presence of about forty spectators and the record of the match is as follows:

N. Curry's Harkaway beat C. L. Place's Golden.
N. Curry's Sweep beat C. L. Place's Nelly.
Clem Dixon's Voucher beat T. Bird's Bummer.
N. Curry's Fly beat Sam Tetlow's Dash Jr.
Clem Dixon's Bonnie Doon beat T. C. Mack's Belle.
C. Harley's Yankee Jim beat J. Lang's Fanny.
James Adams' Fanny Grey beat C. L. Place's Prince.
Second Ties—Sweep beat Harkaway.
Voucher beat Fly.
Yankee Jim beat Bonnie Doon.
Fanny Grey ran a bye.
Third ties—Voucher beat Sweep.
Fanny Grey beat Yankee Jim.
Final Tie—James Adams' Fanny Grey beat Voucher and won the Challenge Collar.
The Battle Royal was won by N. Curry's Harkaway.
M. H. Kelly was judge of the match.

The next regular match was run at Pacheco, Contra Costa County, by the same club, the same dogs being engaged. In the final James Adams' Fanny Grey beat Clem Dixon's Voucher again and thus got possession of the Challenge Collar. The result of these two matches is a fair indication that James Adams at that time owned the best dogs in California, and then Clem Dixon for a time had to take the second place.

On November 20 and 21, 1868, a match was run at Suisun in which a puppy and old dog stake were contested. In the puppy stake the result was as follows:

James Adams' King Cob beat N. Curry's Sweep.
N. Curry's Harkaway beat C. L. Place's Jack.
Sam Felton's Dash Jr. beat C. L. Place's Prince.
Robinson's Jennie Dean and T. H. Mark's Juno were both drawn.
S. Trumbull's California Lass ran a bye.
Second Ties—King Cob beat California Lass.
Dash Jr. beat Harkaway.

In the final tie James Adams' King Cob beat Dash Jr. and won the cup, thus making Adams winner of the first three regular matches ever run in the state.

The old dog stake had to be postponed on account of rain.

The next event of importance in the annals of coursing was the formation of the Sacramento Coursing Club on January 13, 1870. At the preliminary meeting in the Golden Eagle Hotel James W. Hawkins acted as Chairman and L. Wells as Secretary. The Club then extended a challenge to the Pioneer Club of San Francisco for twenty of its members to visit Sacramento and run a friendly match of five dogs from each club. In case the San Franciscans win all their bills of expenses to be paid by the Sacramento Club. In accordance with that agreement a match was run at Whitcomb's ranch, Sacramento, early in the spring.

San Francisco was represented by Dr. Sharkey's Molly, N. Curry's Harkaway, R. Warwick's Spring, J. Hardy's Tip, James Adams' Beauford, James Cue's Sport, John Scarlett's Fly and Clem Dixon's Belle of the Cottage.

Sacramento was represented by D. E. Callahan's Clay, J. Hawkins' Abe, J. Hawkins' Sweep, E. M. Skagg's Frank, J. Conlan's Gipsy, W. Richard's Black Nose, J. Hawkins' Queen and J. Hawkins' Prince. The dogs were paired off in the order named.

San Francisco won the two first races and the fifth, Sacramento won the third, fourth, sixth, seventh and eighth. There was much complaint at the decision of the judge. The Sacramento Club claimed the match by five wins to three. The San Franciscans demanded that the match be run off until only one dog was left, as is the regular rule of coursing matches. This was denied and the matter was never finally settled.

On Dec. 16, 1869, the Pioneer Club ran its third match, the match the year before having been put off on account of bad weather. The place selected was Pacheco. James Adams, N. Curry, M. H. Kelly, J. K. Orr, R. Warwick, E. T. Buchman, P. McCue, C. L. Place and Clem Dixon had dogs entered.

The match was won by M. H. Kelly's Irish Boy, the runner up being P. McCue's Sport. N. Curry's Sweep and R. Warwick's Spring divided the beaten dog stake. The puppy stake was won by W. Tague's Fly, the runner up being Tom Tunstead's Jennie Grant.

The next match gotten up by the old Pioneer Club was run at Ellis Station, March 30, 1870. J. W. Walsh, judge, and Tom Tunstead, slipper. Clem Dixon's Belle of the Cottage won the match, the "runner up" being J. H. Lord's Lightfoot. Belle of the Cottage was imported from the North of England by Clem Dixon and was by Ingomar, a celebrated Waterloo Cup winner. In honor of the victory Charles Barr of San Jose gave a dinner to the participants in the match.

From this time out the Pioneer Club held matches regularly twice a year in places near San Francisco until the increase of plowed land forced them farther afield, and they were forced to visit Merced, which is not likely to be closed out against coursers for some years to come. Many new men came into the club and imported dogs from England, fine representation being seen at the match held in Merced, Nov. 18, 1876, which for its great interest we give rather fully. Wilson Davidson acted as judge and Dominick Shannon as slipper. The first ties were as follows:

James Adams' Ruler beat W. Davidson's Sandy.
Dominick Shannon's Empress beat Jerome Deasy's Sally Kearns.

J. Searles' Lady Belle beat Tom Tunstead's Moll Pitcher, N. Curry's Fly beat J. A. Colvin's Belfast Boy.
W. H. Orr's Ben Franklin beat William Ryan's Yellow Hammer.

C. L. Place's Minetta beat J. A. Colvin's Lady Coote.
D. W. White's Gentleman Jones beat J. Douglas's Thomhill.
D. Shannon's Mutnie beat D. W. White's Lady Jones.
N. Curry's "Stub and Twist" beat D. W. White's Souter Johnny.

J. Franklin's Lucy beat Charles Barr's Fleet.
J. Kyle's Belfast Maid beat J. A. Colvin's Pedro.
C. L. Place's Blanche beat T. Tunstead's Ethan Allen.
Dr. Sharkey's Master Joe beat Charles Barr's San Jose Belle.

The match was won by Place's Blanche, the runner up being Dominick Shannon's Empress, King Cobb third, Thomhill fourth.

The Puppy Stake was won by Searle's Kitty Clover, the runner up being Mountain View Belle.

The next three matches in succession, the first prize was won by Tom Tunstead's Minnehaha, who was beaten in the fourth match by James Adams' Ruler.

The same year that this happened the Pacific Coast Coursing Club was organized, with Mark Devlin for President, Mr. Bryan for Secretary, Charles Fowler, Treasurer. This club is one of the most energetic and prosperous in the State to-day. The first match was run at Modesto, Judge Pennie's Jemima winning with Berry's Swindler as runner up. Following winners were Mark Devlin's Pride of the Canyon, J. Carroll's Kitty Clover, J. Carroll's Paul Jones, Mark Devlin's Chief of the Canyon and Gentleman Jones Jr. Pride of the Canyon won twice.

In the spring of 1881 the California Coursing Club was organized with Dr. Sharkey as President, J. J. Murphy as Secretary and J. Carroll as Treasurer. Their first match was held at Merced, November 15, 1881; J. C. Murphy was judge and T. T. Williams slipper. Carroll's Monarch took first prize, the runner up being A. Jackson's Stonewall Jackson. Merced Maid won the Puppy Stakes.

The last matches of this and the other clubs are too fresh to need recapitulation.

For the last two years the Pioneer Coursing Club has fallen behind owing to the loss of some members and the waning interest of others. Some have left the club because they lost a match and others are dead or have left the city. But we hear that an effort is about to be made to put Club No. 1 in the front rank once more and about a dozen well-to-do lovers of the sport are talking about joining the club. Such an infusion of new blood would do wonders and we must say that there is room for the old club and a howling demand for gentlemen who can attend a match, enjoy the sport and leave the field with good nature whether they win or lose.

Writing of old coursing matches brings to our mind's eye the familiar figures of those who were past masters in the sport ere we were born and who though now dead and gone are often spoken of in terms of kindly remembrance by those whose dogs vied with theirs for supremacy in many a well-run course on the San Joaquin plains. Who of all the old members of the Pioneer Coursing Club will ever forget Captain Place? He was an enthusiast in the sport and owned some good dogs, notably Gentleman Jones and Branch. He never failed to attend every coursing match that took place within 200 miles of San Francisco and though he often lost and generally growled a little at his luck, there was no malice in his heart nor sting in his words. He enjoyed the sport hugely. Standing high in his wagon, he would watch every turn and point the dogs made, and how the old man would yell when his dog gained an advantage. He went to a coursing match for fun and from the time he left the city until his return he was always awake and always devising some joke or bit of fun. The only one of his jokes not appreciated was his attempts to sing, for he had a most dismal voice and not the slightest idea of time or tune. One night at Point of Timbers Hotel on the eve of a private match between Monarch and Kitty Clover he kept the whole house awake for four hours while he was attempting to sing a song, the only line of which he knew was:

"Did you ever see a wild geese sailing o'er the ocean?"

This he kept repeating until finally Tunstead and others could bear it no longer and he was kindly but firmly suppressed.

Then there was Mr. Searles, a kindly modest gentleman, who won the heart of every man he met. He imported several dogs from England and was a valuable patron of the sport, sadly missed when he died.

Dave White, as he was familiarly called, is another of the

old guard who have passed away. He was a thorough sportsman and a genial gentleman.

Poor old Philosopher Pickett, though not a coursing man in the true sense, sometimes attended the matches. He was remarkable for the good nature with which he could take a joke, and many a rough one was played on him. Once the boys cut the cinch of his horse, crossed the lines and tied his coat to the saddle, and had it not been for Tom Tunstead the old gentleman would have been seriously hurt. But he never complained nor did he "kick" at the end of the day when he had worn a device on his back announcing that he was blind. But we must not dwell too long on those who are gone and shortened space warns us to close, with the hope that the future of coursing in California may be as bright as we wish it, and to the extent of our good wishes there is no limit.

RACING IN AUSTRALIA.

Victoria Racing Club Spring Meeting—Cup Day—Tuesday, October 31.

When the racing began, and Belmont won the Maiden Plate with comparative ease from Calma, the backers of Mistaken felt truly cock-a-whoop, for it showed that the St. Albans stable was in good form. Then Boolka bowled over his field in the Railway Stakes, and the favorite Lady Jervois landed the Kensington Stakes with Halifax second, all three of the above having been boldly foretold by the *Sportsman*. But "a change had come over the spirit of the dream" as the time approached for the Melbourne Cup to be decided, and a bitterer, wetter, or more blustering hour was never known on the Saltwater Flat than that during which the preparation and the running for the Great Annual Handicap took place. Calculations were upset; curses sounded loud and deep; and not a contented visage could be selected among the assembled thousands. A detailed description of the parody of a contest we shall not attempt to give in this place. Suffice it to say that the Tasmanian-owned Stockwell made the pace, and his more immediate attendants from almost the commencement of the higgledy-piggledy fray were The Assyrian and Gudarz. In such a pitiless storm blowing full in the face of horse and rider—and with the mud flying back from the leaders—it was almost hopeless to expect even the gamiest of the racers to forge to the front; and therefore these three held their own throughout. Nearing home Stockwell had out-run himself, and The Assyrian therefore beat him in the final set-to, whilst Gudarz finished a very fair third, followed by his stable mate Sweet William, the heavy-weighted Darebin, and the still more severely treated Segenhoe. The slow time of 3:40 sufficiently tells that the race was "all wrong." The Darling Stakes won by Essex, and the Van Yean Stakes by Stockwell's mate Bagot, concluded a miserable afternoon, although the clouds had cleared away soon after doing the irremediable mischief.

Melbourne Cup—A handicap sweepstakes of 20 sovs. each, 10ft., or 5 only if declared before 7th August, with 500 added. (The handicap weight of the winner of the A. J. C. or V. R. C. Derby is not less than 6st 12lb, and the winner of any handicap race of the value of 100 sovs., after the declaration of the weights, to carry 3lb extra; of any such race of the value of 200 sovs., 5lb extra; of any such race of the value of 500 sovs., 7lb extra. Penalties not cumulative. The second horse to receive 200 sovs. and the third 100 sovs. out of the stake. Two miles. (288 subs.)

Mr. J. E. Saville's br h The Assyrian, 5 yrs., by Countryman—Tin-fader, 11lbs. (Hutchins)..... 1
Mr. T. Reibey's ch h Stockwell, 4 yrs., by St. Albans—Edella, 103 lbs. (Reilly)..... 2
Mr. F. de Mestre's br h Gudarz, 4 yrs., 105 lbs. (Gaugesford)..... 3
Twenty-two others ran unplaced.

Betting, 4 to 1 against Sweet William; 5 to 1, Mistaken; 8 to 1, Little Jack; 12 to 1, Odd Trick; 15 to 1, Stockwell; 16 to 1 each Sting, King of the Vale and Darebin; 16 to 1, Assyrian, 20 to 1 each Lord Lisgar, Sylvanus, Savanaka, Cunnamulla; 25 to 1, Pollio; 30 to 1 each Jessie, Gudarz, Drummer; 40 to 1, Santa Claus; 50 to 1 each Lord Burghley, First Water; 100 to 1, Segenhoe.

Mr. George Watson did not dispatch the field until after a couple of attempts, the principal trouble at the post being Cunnamulla, who seemed full of bad temper and kicked viciously at any horse coming near him. Consequently he was ordered to the extreme outside, and when the flag fell the twenty-five starters appeared to get away on fair terms. Owing to heavy rain and high wind it was almost impossible to satisfactorily distinguish the commencement of the race, but Sting and Gudarz were the first to be recognized, and after crossing the tan Flying Jib assumed command till past the stand, Stockwell, Gudarz, Mistake, Santa Claus, Brunette, Segenhoe and Sweet William being the foremost of the main body, Savanaka, First Water and Drummer in the rear, Lord Burghley a long last. At the river bend Stockwell took up the running, Gudarz, Flying Jib and Brunette next; then a cluster consisting of Mistaken, Sweet William, Assyrian, Darebin, Little Jack and Cunnamulla. Along the opposite side of the course Stockwell carried on his lead, Gudarz and Assyrian chasing him at the abattoirs, and Mistaken running so boldly into third place on approaching the scraping-sheds as to look most dangerous, but then suddenly falling back as if losing his feet. Lord Lisgar's colors now showed amongst the leaders for a moment and then Darebin got near to Gudarz, but Assyrian tackled him and shook him off. Approaching the important turn into the long run home, Stockwell looked very dangerous, having a commanding advantage, Assyrian, however, going grandly into his wake, and Gudarz holding his own, though Darebin, Segenhoe and Sweet William each had a try to get forward. Nothing else joined the front division in the straight, and at the distance post the race remained entirely between Stockwell and The Assyrian; but the latter lasting the best he reached the winning chair two-thirds of a length in front without much trouble, Gudarz finishing a tolerable third, Sweet William fourth, Darebin fifth, Segenhoe sixth, Sylvanus seventh and the stable companions, Pollio and Sting, last. Time, 3:40. Value of stakes, £1,710.

Incidents and Coincidences.

"The Assyrian came down like a wolf on the fold,
And the backers lamb (being) skinned 'as of old,"
—Byron (paraphrased).

According to common report no less than 50,000 people, with one simultaneous consent, quoted Byron's well-known lines within five minutes of the Cup upset through the Adelaide outsider; and, on the strength of the Rev. Rowland Hill's assertion that "the Devil has no right to the best tunes"—which opinion caused him to have many of the hymns at his famous Tabernacle sung to opera airs—the right is now claimed of paraphrasing the words so peculiarly adapted to the present article. Moreover, the play on the words as to "skinning the lamb"—an operation so dear to the bookmaking fraternity—is all our own, beside being much to the purpose. But to business. When deciding on the title of to-day's contribution to the leading column, the original intent was to dwell at length on the many incidents and coincidences connected with the running of the time-honored Melbourne Cup; but severe pressure on the

Sportsman's space, added to more than a suspicion that readers prefer "good goods done up in small parcels," has caused us to give instead a terse but highly interesting resume of several noteworthy facts connected with the history of this important handicap. There have been 22 Cups run, the first having been in the year 1861; and the proportion into which they have been divided amongst the several colonies is 11 (exactly one-half) for New South Wales, 10 for Victoria, and one (that is just over) for South Australia. This calculation, however, refers only to the ownership of the winner, and if the breeding-place of the horses be taken into account (as it justly might) the sister colonies are each entitled to another unit, for Warrior hailed from Sydney, and Adelaide claimed the honor of Don Juan's nativity. Strange to say, also, each of these animals made the fortunes of the metalicians who "went a perisher" on their chances, viz., Mr. Austin Saqui the one, and Mr. Joe Thompson the other. The relative figures would therefore be, in respect to equine merits, 12 for New South Wales, 8 for Victoria, and 2 for South Australia. Those persons, then, who set down the Assyrian's win as the first credited to our Southern neighbors, are scarcely correct in the assertion; nor does the Northern colony receive its due honor unless a round dozen triumphs are placed on its roll of turf fame.

The intuitive politeness of the French nation teaches them to render *place aux dames* as an invariable rule, and the duty of racing scribes is to so far follow this polite regulation as to give the *pas* to the noble horse when discussing such matters as the present, and then pass on to the owner. Proceeding then from quadrupeds to bipeds we find that Mr. De Mestre has trained five winners, viz., Archer twice, and then Tim Whiffler, Chester and Calamia. Both times that Archer came in first it is a singular fact that Mr. P. Keighran's Mormon finished second; and it is also strange that the same gentleman should subsequently have run second and third with Exile in successive years. Mr. John Tait—"honest John" of the popular yellow jacket and black cap,—ranks next to the "black and all black" of the Terrara squire, having had four firsts at Flemington with Barb, Glencoe, Pearl and Quack. Mr. James Wilson, despite the number of times he has contested the Cup, and the many justifiable favorites he has brought to the post, only counts two successes in Don Juan and Briseis. On the other hand, no trainer or owner ever had the series of ill luck which has attended him of St. Albans, no less than six disappointing seconds having been hoisted on the signal boards—to wit, Musidora, Lapdog (who lost by half a head in Nimblefoot's year after slipping his round-bone at the turn home), Romula, Protos, Savanaka, and Progress. It is well known, moreover, to those "behind the scenes," that Melita and Duchess were "morals" but for female reasons; and that the highly tried Mistaken could hardly have lost last Tuesday had the ground been dry. This truthful and unprejudiced statement shows that Mr. Wilson, had he not met with an extra-average of *contretemps*, might have scored exactly one-half of the past Cups. As a salve for these failures it may be mentioned that Briseis, with whom he pulled off the double Derby and Cup in the sensational Newminster season, was out of his favorite mare Musidora, who ran second in 1863, and thus time "worked its revenge." No other owner ever won more than once.

Outsiders only upset the favorites on five occasions, the nags to thus do the ring a turn being Toryboy, Pearl, Darriwell, Zulu and The Assyrian, the latter time being the slowest of any except Toryboy.

But one mare has ever been returned victrix, this being Mr. Wilson's beautiful Briseis, bred by himself. Musidora and Rose of Denmark, however, ran second and third to Banker, Queen of Hearts second to Tim Whiffler, Romula second to Pearl, and Sybil followed Briseis home.

Coming again to biped records we find that only two jockeys have had the winning mounts twice, Johnny Cutts having steered Archer on each occasion, whilst Pigott had the double honor of Haricot and Chester. Among the erst-while light weights who have figured in the pigskin for Melbourne, but have now attained the position of able and respectable trainers, may be named Morrison, Chifney, T. Brown, Pigott and Batty.

Finally, it is deserving of note, as proving how utterly all calculations in favor of our Victorian representatives for the cup were upset by the terrible weather last Tuesday, that the first horse was an Adelaidean, the second a Tasmanian, and the third, fourth and fifth New South Wales. In a future article on the recent V. R. C. Meeting we may relate other "incidents and coincidences" of similar import.—*The Sportsman, Melbourne, Australia.*

A Vermont farmer says: "Cows giving milk and growing stock require some variation in the quality of the food. Contrary to the belief of some, roots should not be fed with straw or poor hay, as they are too much alike in composition. Feed the roots with clover or good hay, and give the more concentrated food with the straw. It requires more skill to be successful in feeding poor than rich kinds of food. Corn fodder may be made more palatable for stock by being preserved in a silo, but nothing is added to the nutritive qualities. Sheep require a greater proportion of food according to weight than cattle, as also will the smaller animals, as there is the greatest loss of heat in the last. Corn meal and wheat bran mixed for the production of milk will be better than either alone. Horses weighing 1,000 pounds require twenty-two pounds of good hay per day. Too much of hay and too little of concentrated food is given to horses. Would advise feeding clover hay to sheep, good hay to cows and hay and grain to horses. Good corn stalks, well cured, are about equal to hay for milk cows. If grain is needed would feed cotton-seed meal or bran, or both mixed. Would not advise feeding much grain to cows when dry. Properly fed, apples make a good food for cows, say about one-half bushel each day at first."

In some parts of Spain, where butter is a rare article of merchandise, it is sold not by the pound but by the yard. It is brought from the mountain district in sheep's intestines, like sausages that are "tied off" with strings in lengths as required by the buyer. To travelers butter by the inch seems rather curious hargaining; the produce is usually neither palatable nor particularly clean.

A cross of the Jersey with the Ayrshire should make a desirable cow for ordinary farm purposes. The Ayrshire has more size than the Jersey, gives a larger flow of milk and the addition of Jersey blood will create a disposition to rich cream and gilt-edged butter.—*Cultivator.*

The competition in beef has forced Eastern butchers to build large cold-storage houses at various points in New England and New York, so that they can furnish to their customers a superior article and at a price not higher than the Chicago-dressed beef.

The Minneapolis *Tribune* says that goats are the best land cleaners known. It mentions that a herd of 1,000 entirely cleared a piece of brush land consisting of 500 acres in three years. So complete was the work that not a vestige of undergrowth was left.

THE GUN.

Gunning Along the Sacramento.

A correspondent of *Forest and Stream*, in a letter to that journal from Sacramento, says:

On my way I had to pass around the outskirts of a strip of young timber, principally sycamores, willows and cottonwoods, and in so doing surprised myself by blundering right into a covey of quails, which immediately took a bee line into the air and settled themselves among the topmost branches of the tallest sycamores. (I stopped one of the towerers, however, before he got there.) Failing to get the birds out I went on, and after emerging from the brush (this was only a mile and a half from a city of 25,000 inhabitants) found another covey out in the short grass. Being between them and their favorite hiding place, and knowing their habits quite well, I fired a shot at once to make them scatter and hide in the grass, which they did. This was very near the edge of a slough along the edge of which was a thin fringe of high tule, or flags, which hid the water from my view, and I did not know that there were ducks there. But there were, and of course they took wing, but did not get out of range before I brought down a couple of fine, plump bluebills with my left barrel, which was loaded with only No. 9 shot. Then I went after the quail, and before they got back to the brush I had bagged six of them. The afternoon was bright and the ducks scarce, so I went to another slough which is lined with springy, boggy banks, where I had often found English snipe, and they were there then. Having a fair supply of No. 9 cartridges with me, I went for the long-billed fellows, and by the time the sun had begun to gild with its gorgeous crimson and golden hues the neighboring snow-clad summits of the Sierras, I found I had thirteen big, fat snipe, seven quail, two ducks and a cottontail.

This was pretty good for a short afternoon's hunt, but I was not quite satisfied. I believed there would be a fair flight of ducks in the evening from the marshes that lay a few miles to the west, so I waited by one of the sloughs until the great oak trees cast broad and forbidding shadows over the plains; and then, just as I began to grow chilly and disappointed, the dusky fowls put in an appearance. First came the teals, skimming low above the ground in their swift, erratic flight, and I had to empty a great many shells at the little fellows to get half a dozen of them. Soon the widgeon came along in big flocks, but too high, and occasionally a pair of mallards for a choice place to feed, while above them all I could occasionally hear the rushing noise made by a big body of canvas backs, but could not get a chance at them, as they knew where they were going, and it was to some place other than shallow sloughs. It soon became too dark to see the teal, which I knew must have come within ten or fifteen yards of me, and I set out for town, which I reached in half an hour. My bag counted, when I reached home, four mallards and seven teal, besides the two other ducks, seven quails, thirteen snipes and a rabbit before mentioned. I thought that a pretty successful four hours' shoot, within almost gunshot of a city that turns out every week about as many gunners as any place of its size in the Union. This illustrates the variety of sport that is to be had in many parts of this State.

From the Hunting Grounds.

Up the river the hunting is very poor; in fact it has nearly come to a stand still. Though a few fair bags have recently been made at the Teal Station preserve the general report is that the best sport is over. The ducks have nearly all deserted the ponds and they now spend the most of their time out on the bay and rivers, or else in following flocks of geese around over the bald marshes. These geese it is said dig and tear up the soft ground like so many hogs and the ducks following close get the benefit of the others' labor. As these bald marshes are open the hunters have great difficulty in getting near enough to the game to warrant shooting. The best hunting around the marshes is by sculling around in the sloughs and shooting stray birds as they rise. There has been considerable hunting done by moonlight by the hunters from the towns in the vicinity of the preserves and this too has driven away a great deal of the game, as nothing will frighten water fowls from a locality quicker than the flash of guns on dark or moonlight nights. The sprig, mallard and teal that come in from up the river, are in rather poor condition, though the cans are said to be fat and palatable.

From the other direction the case is altogether different, sportsmen going to Alviso and Alvarado return generally well laden with game and all in good condition. If the hunters could be counted one would wonder how long the game would last, but every Sunday the numbers do not decrease, nor does the size of the game bags of the hunters as they return in the evening.

From along the line of the narrow gauge railroad the hunting has given out.

SIDE HUNTS.—The valuation of game adopted by the Gulf City Gun Club, Mobile, Ala., for their annual hunt, held Nov. 19 and 20, was as follows: Bear 300, wildcat 150, deer—buck 125, doe 100, fox 100, rabbit 12, squirrel 7, goose 75, turkey—gobbler 60, hen 50, chicken hawk 25, owl 20, sparrow hawk 10, woodcock 20, quail 7, wild pigeon 10, Wilson's snipe 5, plover 5, papabot 10, dove 4, robin 1, lark 1, rail 1, poule d'eau 1, king rail 2, gallinule 2, ducks—canvas back 25, black mallard 20, mallard 10, chick cock 8, pintail 8, widgeon 8, redhead 8, teal 5, all other ducks 5.

A gentleman who has been traveling in the valley to the west of Oroville says that there is an abundance of wild ducks—mostly mallards—all along the line of the Spring Valley debris canal. East of the canal there were a great many Canada geese—honkers; while on the west side there were millions of white and gray brandt.

Messrs. C. D. Ladd, E. H. Ladd, Mr. Brown and Mr. Gould were at the Alvarado marshes and got the best bag that has been made lately. Though they worked hard they were rewarded by obtaining eighty ducks, fifteen marsh rail and fifteen plover. There were but few hunters on the marshes.

Last Sunday Messrs. Stack, Spencer and Hoefling killed 145 ducks on the Alviso marshes. Thirty of these birds were canvasbacks. It is a rare occurrence for so many cans to be flying down in that vicinity.

Gun-making is one of the foremost industries in Syracuse, N. Y. The sales of guns manufactured there during the past year are said to have been \$200,000, based on a capital of only \$95,000.—*Bee.*

We are sorry to hear that Mr. R. N. Brooks, a member of the Cosmopolitan Club and an enthusiastic hunter, is very sick just now, but we hope he will speedily recover.

Wild Fowl Shooting.

It must be said that the shooting for water fowl has not been this year what it formerly was. The absence of birds is not noticeable in one locality alone but in many. No doubt the gradual increase of population and the settling up of localities near the former feeding grounds of the birds has much to do with it. Then again the mud hens and the white geese are in a sense "preserved" as no one cares to shoot them much, and they thrive and increase, while a war of extermination is carried on against the ducks. And the mud hens get away with a good deal of feed.

At none of the usual sporting grounds has there been as good shooting as there used to be. In the Suisun marshes, where there are several preserves of shooting clubs, the sport has been so poor that the shooters are discouraged. They attribute the scarcity of game to the presence of the railroad. Of course ducks do not take kindly to the railway cars but this is not alone the cause. It is more probably because the tule islands, many of them, remain overflowed and the birds go to the ponds upon them in preference to remaining on the salt marshes. At all events the shooting is not good nor has it been this season.

Several of the tule islands have been in a measure preserved; that is portions of them that were accessible have been looked after by shooting clubs.

A feature of the wild fowl shooting of late in this State has been the formation of clubs and the preservation of grounds for the exclusive use of the members. A few years ago no such thing was heard of in California. Now, however, if men fond of wild fowl shooting want to be insured good sport they must not only preserve the grounds but sow seed and bait the ponds. This is all very well for the shooter with money but it is rather rough on the one who has not. Still if the grounds were not here and there preserved we should be in a little while without any place at all to shoot ducks.

All the available parts of the Suisun marshes are preserved and several of the tule islands like Sherman island are preserved in such parts as are readily accessible. There are several places kept by preserves along the shore of the bay and the Alviso and Petaluma Creek grounds will soon be kept apart in the same way.

It strikes us that the heavy bags which used to be taken by shooters will never be so frequent as of yore, and people will have to be satisfied that they have had a good day's shoot if they kill half what they used to. Still if more and more ground is set apart as preserves, it may be that in a season or so the birds will become more numerous.

A Christmas Ghost.

Last Monday morning two hunters came in from the Alvarado marshes on the early train. From their general appearance one would judge that something was wrong. Their faces wore a deadly milk-and-water look and their hair had not the usual smooth lay. On a promise of the closest secrecy the writer found out the cause of their disturbance. "We saw a ghost on the marshes last night," said hunter No. 1, with a shudder. "Yes, a real ghost," echoed No. 2 and the blonde of the first and the black hair of the second speaker assumed a perpendicular position as the thought called to mind their night's experience. Said No. 1: "We were hunting by moonlight on the marshes and had had pretty fine luck till half past eleven when the ducks began flying very high and seemed very much disturbed. As we were sitting behind our blind at about twelve o'clock we saw out on the marshes a white object that every now and then threw up its white arms in a threatening manner. Slowly and with a gliding even motion it circled around us two or three times. We were both much scared and did not think of either calling out or shooting at the apparition; my hat sat on the end of my hair which stood out straight, while my companion went on his knees in the mud and started in something like 'Now I lay me down to sleep,' when he suddenly broke off with: 'D— it, 'tis nothing but a white crane; what a pair of fools we are!' The explanation was sufficient but we alternately pulled at a suspicious, ugly looking black bottle to steady our nerves. "Some how or other," said No. 1, stroking his blonde head, "my hair doesn't stay down smooth this morning." "Yes," said hunter No. 2 as he pulled at his raven mustache, "some how or other though the ducks did fly well after that we couldn't seem to hit any. It doesn't take much to upset a man. What will you have? For gracious sake don't give this away." We promised we would not, but the ashy-hued lips and the mud on the one's knees convinced us that they both had been scared.

The is good sport "sailing for mallards" in the sloughs now-a-days, but it is hard work on the wrists to keep a duck-boat moving all day with one oar. The mallards are "jumpers up" at the bends and turns of the sloughs in twos and threes, and a quick shot will have very good sport. It is much warmer work than getting in a blind before daylight waiting for birds to fly in.

The Lolita, the yacht the Cordelia Shooting Club have had at their preserves in Suisun marsh all winter, will be brought down on January 15, the contract being up then. The shooting is now so poor that it is not probable the club will do any more shooting there after the date mentioned this season.

There was but little hunting done on Christmas, as most of the boys preferred to stay at home and shoot champagne corks with their friends rather than to wade around in a cold marsh after ducks.

Mr. Jas. Payne and W. W. T aylor recently bagged fifty-eight ducks at the Teal Station preserve. Mr. Crittenden Robinson killed thirty ducks at the same place.

Mr. Whipple and his brother from Dakota shot thirty-five ducks and quite a number of snipe on the Alvarado marshes last Sunday.

Hunters who have been up along the line of the narrow gauge railroad of late have come home "skunked."

There are a great many hunters going to the Alviso and Alvarado marshes for a New Year's shooting.

The other day Mr. W. W. T aylor killed 65 ducks at the Teal Station preserve.

Charlie Dalle recently brought home 25 ducks from his hunt at Sherman Island.

Mr. Ault was down at the Bridges last Sunday, and killed 24 ducks.

James Payne is going to start a preserve at the Petaluma marshes for next season. This is a place easy of access and where there might be good sport. Petaluma in the Indian dialect means "duck kill." There used to be more ducks about there than anywhere else on the

Up at Suisun the other day Ben Stickney killed 16 geese with two barrels, No. 6 shot. He crawled up on the birds and let them have both barrels. This is a goose yarn we have the papers for since Ben brought in the geese.

Two good shots tried the marsh lands last Sunday down near Sau Mateo. One shot a mallard and the other got two "mud-larks." They haven't said much about their "string."

More "cans" have been shot on Grand Island than anywhere else this season. But there have been lots of hunters up there.

There are lots of geese and small ducks in the Suisun marshes just now, but very few "cans" or mallards.

James Payne is no longer connected with the Teal Shooting Club, his contract with them expiring this month.

There are quantities of coots and other poor ducks in the lower bays just now.

A good many hunters find sport on the Alvarado marshes every Sunday.

Mr. Tristram Burges of San Francisco has lost by death his Champion Llewellyn setter bitch, Queen Mah, from blood-poisoning, the result of whelping.

Champion Queen Mab was bred and trained by R. Ll. P. Llewellyn, Ashby de la Zouch, England; imported by Arnold Burges, Hillsdale, Michigan. Whelped August 24, 1874; by the celebrated Dan out of Nelly. Registered No. 8223, English Kennel Club Stud Book. Registered No. 495, National American Kennel Club Stud Book.

Winner of the following prizes:

First and champion, Chicago, 1876.

First and champion, and special for Best Brace, with Druid, St. Louis, 1878.

First and champion, and special for Best Brace, with Druid, Detroit, 1879.

First and champion, and special for Best Brace, with Druid, St. Louis, 1879.

First and champion, New York, 1880.

First in class, and special for "most perfect specimen of dog or bitch in show," San Francisco, 1881.

Answers to Correspondents.

EDITOR BREEDER AND SPORTSMAN: Which horse was the sire of Lodi, owned by the late Nathan Coombs of Napa, and what horse was the sire of Monday?

ARIZONA.

Answer—The sire of Lodi was imported Yorkshire. The sire of Monday was Colton. Lodi and Colton were from the same mare, Topaz by imported Glencoe, Colton being by Lexington.

CORRESPONDENCE.

New South Wales Sporting News.

SYDNEY, Nov. 27, 1882.

TO THE EDITOR OF THE BREEDER AND SPORTSMAN: In my last letter to you I left off in the midst of the spring carnival held on Flemington racecourse, Victoria, and therein was contained an account of the cup contest. The third day, Nov. 2, commenced enjoyably, indeed it is rarely that Oaks Day, for such is the third day termed, meets with other than "Queen's weather," while the attendance numbered about 4,000. The ball was set rolling with a hurdle race for which eleven saddled up. The value of the prize was \$1,110; distance about three miles. Betting, 2 to 1 against Lord of Clyde, who never gained a situation, 7 to 1 against Lothair, 8 to 1 against Basilists and Sportsman. Mr. Huvie's b h Lothair by Epigram from Legend won easily by four lengths, carrying 166lbs, completing the journey in 5:44. The same horse as a three-year-old ran fourth in the Melbourne Cup, won by Grand Flaneur, and has won several good hurdle races of late. In the weight-for-age races, considerable discussion had taken place relative to the merits of Darebin and Commotion; I have always maintained that the latter, a son of Panic, was the better over a mile and a half, and this belief has been fully indorsed by the meetings in the Canterbury Plate, in the fourth plate. In the Royal Park Stakes of two miles, weight-for-age, Darebin won by a dozen lengths from Lord Burghley. The disappointed, Maribyrnong Plate. Kingsdale recouped his owner by winning the Flying Handicap from St. Lawrence. The Spring Handicap of one mile and a quarter fell to the North Australian colt, Standard Bearer, by Greyeagle, beating Lesbia and The Czar. The race was a magnificent one, and fought out from the distance, eventuating in a head win, half a length between second and third. The principal event of the day, "the Oaks." The prize is a sweep of \$125 each, \$25 forfeit, with \$1,500; for three-year-old fillies, 8 st. 10lbs., one mile and a half (61 subs). The winner turned out in Mr. F. Wentworth's b f Vanclusa, by Rapid Boy—Chrysolite, while Mr. E. De Mestre's filly Solitude, who had remained the winter favorite, was easily defeated. This is to be accounted for by Eva, who ran third, taking up the running at such a cracking pace and the favorite taking up the following; Vanclusa, a long lead was never able to get on anything like terms. The day was concluded by the Veteran Stakes, of one mile and a half. Here Commotion, with the heavy impost of 131lbs, beat the cup winner, Assyrian, 126 lbs, by three lengths, the time occupying 2:38½. In this race very good proof was given of Assyrian's merits and his second to Commotion goes a long way to prove that winning the Melbourne Cup was no fluke.

Fourth day, Saturday, Nov. 4—The last day proved perhaps the most enjoyable of the four, while the ladies turned out en masse with very choice and handsome spring toilets as if it were to make amends for the "Cup day," which with the moistness of the elements gave their handsome costumes a hue and tinge never dreamt of by the fair wearers. The scene on the

lawn surpassed anything seen during the previous three days. The racing opened with the Flemington Stakes, for which 25 horses sported silk. The race was for two-year-olds and fell to the Hon. Jas. White's br colt, Middlemarch, by Maribyrnong—Housemaid, followed home by D. S. Wallace's gr f Duenna, by Lecturer. In the race it shows how disappointing private trials are as Middlemarch in the Maribyrnong Plate of five furlongs, the similar distance, was unable to obtain a place in 1:04½ while he won the race easily in three lengths in 1:03½. Segenhoe, the great winter favorite for the V. R. C. Derby, again disappointed his stable. In the Mares' Produce Stakes, one mile and a quarter, Mr. D. S. Wallace's colt Calma, three years, by Yattendon from London Pride, defeated Boolka and Segenhoe by a length, the latter pair running a dead heat for second honors, time, 2:11½. The V. R. C. Handicap of one mile and a quarter produced one of the best and most exciting finishes of the reunion between Mr. E. De Mestre's br h Gudarz, by Yattendon, carrying 110 lbs., Wm. Forrester's hlk h Gipsy Cooper, 109lbs, T. Ivory's br h Lord Burghley, 116lbs. A considerable amount of speculation ensued over this race from the fact that a number of disappointed Cup horses took part in the race which resulted in a short half length won for Gudarz from Gipsy Cooper; the time occupied in running the journey was fast, 3:06. Quite a surprise was in store for backers in the steeplechase; Corrigan had the mount on Left Bower, who was weighted at 186lbs and was supposed to possess one of his usual "good things," but the heavy impost told its tale at the finish, and the outsider Kanaka, 136lbs, won by a length from Sailor, 140 lbs; time 6:51½. Considerable interest was manifested by the different admirers of Commotion, Darebin, and The Assyrian meeting at weight-for-age in the Canterbury Plate, distance two and one-quarter miles. Betting, 6 to 4 on Darebin, 7 to 4 against Commotion, 6 to 1 against the other. The favorites made the pace very merry and before a mile and a half had been covered Commotion took up the running and appeared from the pace he was going to make "every post a winning post." He led into the homestretch by three lengths and maintained the advantage to the end; Darebin second and Sweet William third. Time 4:00½. Each horse carried 126 lbs. The Free Handicap, one mile and a half, brought to a close one of the best meetings held on Flemington, and one which has fully illustrated the glorious uncertainty attached to racing. An outsider was "served up" for the "Free" in Plunger, starting at 3 to 1 against him, with large sums invested on him the night before the race and during the day, must have won for his party, about \$30,000. The New South Wales horses secured the largest amount of prize money, for of the total £12,534 paid away, Messrs. De Mestre, Cox, Wentworth, Stewart and White received no less than £6,237. The largest winner was Mr. E. De Mestre, who received £1,205 as first money in the Derby, his total being £1,879. The Hon. E. K. Cox comes next with £1,785 for the win of Narina in the Maribyrnong Plate. Mr. J. E. Saville took £1,715, comprising £1,710 for the Melbourne Cup, and £5 as second in the Veteran Stakes. Amongst the other winners were Mr. R. Howie as first in the Steeple and Hurdle events, £810; Mr. E. Wentworth, £760; Mr. W. Pearson, £711; Mr. D. S. Wallace, £605; Mr. J. H. Hill, £495; Mr. J. Stewart, £478; Mr. F. F. Dakin, £445; Mr. W. Branch, £424; the Hon. E. Reiby, £420; the Hon. J. White, £385; Mr. F. Jordan, £346; Mr. J. Paterson, £333, and Mr. J. Redfern, £350.

The Queensland Turf Club held a two days' gathering commencing on Nov. 8. Goldfinder won the Derby and Mares' Produce Stakes, while Czar won the principal handicaps.

On the same date the Parramatta Jockey Club held a two days' meeting, Willow and Eva winning the principal races.

Since the above the only meeting of any importance has been the Murrumbidge Turf Club spring meeting, held on the banks of the Murrumbidge river. The spot is better known as Wagga Wagga, famous for the Tiebourne claimant. The meeting was rather protracted, extending over four days, and coming so quickly after the V. R. C. Spring carnivals proves too much for horse-owners and v's'ors, consequently they obtain but a few second-class animals to compete, mixed up with the usual country platers. The Wagga Cup fell to Mr. W. R. Hall's br h Cunnamulla, by Maribyrnong, carrying 126 lbs. Willow, 114 lbs., second, but had not Gipsy Cooper, 114 lbs., run off at the home turn, a much better race would have resulted. Guinea and Gipsy Cooper were each at 4 to 1 in the betting but both failed to gain a situation. Jessie won the Maiden Plate, and Eva, whose chance was greatly fancied for the Cup, won the Grand Stand Handicap in good style. St. Lawrence, by imported Glorious, won with consummate ease both the Sires' and Mares' Produce Stakes.

The events set down for decision during our summer months are the Summer Cup, run for under the auspices of the A. J. C., and the Tattersalls Club Cup, with \$1,000 added money.

Trotting does not make any strides in New South Wales; the horse owners appear to possess a decided antipathy to it; not so in Victoria, but even there it has been found advisable to keep up the track, and likewise defray expenses, to introduce running races.

Yachting is in full swing and the harbor presents quite a picture with its numerous craft scudding along before the breeze. Poor Ned Trickett appears to have lost all rowing powers, and last week suffered an easy defeat over the Parramatta river, from Clifford, a sculler from the southern district.

There has been a great deal of talk about a match between M. Rush and Laycock for \$1,000. The former wishes to pull on the Clarence river where he resides, while Elias wants it on the Parramatta river, but I fancy Laycock will accede to his request and should beat him.

The cricketing world is all astir just now, through the arrival of the Hon. Jno. Bligh's team of cricketers. They have met with an excellent acceptance; so have the Australians, banquets and torchlight processions being the order of the day. So far the Englishmen have won and had drawn in their favor the three matches played by them. Our team is a strong batting one, but weak in the bowling element.

To-day being our general election day (the Government having dissolved), I am exceedingly busy and must close my letter sooner than otherwise.

ECHO.

SYDNEY, Nov. 24, 1882.

MR. SIMPSON, Dear Sir: We arrived in Sydney on the 19th. We had a very pleasant trip and Honesty came through in the best possible shape.

The people here think he is a very fine horse. Dr Weir came over from Melbourne yesterday. He seemed very much pleased to see us, and to find Honesty looking so well. We will go on to Melbourne with him to-morrow night. We were going to-night but the Doctor said if we would wait till to-morrow night he would go with us.

Hoping to be back to California in two or three months we remain yours respectfully,

W. H. PARKER,

J. H. WHITING.

New York Letter.

New York, Dec. 20, 1882.

EDITOR BREEDER AND SPORTSMAN: Last week's defeat of Albion's champion amateur runner was somewhat of a surprise to athletic circles hereabouts, for since George's successive victories over Myers, and his stamina and ability to go on, his late valedictory exhibition at Madison Square garden was regarded by the general public in the light of a comparative "walk over," especially when he is credited with the best on record at the distance, ten miles, in 52:56 2-5, made at Lillie Bridge, England. Then the large field that started against him on this occasion number but few runners known to fame, only three or four being thought of any special account, and the handicappers evidently considered that most of them would be coming back long before the end of the trip, judging by the start that George was required to give each opponent, varying from three to fifteen minutes. When it is considered that each minute represents about 300 yards actual distance, one readily sees what a herculean task was set the young Englishman should his opponents turn out to be anything above the grade of mediocrity. But the betting (what little there was) foreshadowed the presumed easy task of the scratch man, it being three to one on him against the field. George evidently must have taken this view of the case himself, for his form was not as good as shown in his races at the Polo grounds, and he had evidently been indulged a trifle, though his party made no excuse for him on the score of condition. Some runners, however, prefer competing in the open air to racing in a closed building where the atmosphere becomes of necessity more or less vitiated from tobacco smoke and natural causes, even on a winter night, such as this one was. What is "sauce for the goose, however, is sauce for the gander," and the writer does not wish to be understood as attempting to belittle the victory of young Delaney, who, though only about twenty years of age, went off like a hero and, never faltering from the word go, outstayed in the gamiest possible manner his doughty opponent, beating him nearly a sixth of a mile, exclusive of his time allowance. Delaney ran the last lap of the race like a scared deer, showing much better stamina than George, who must have been a trifle off on this occasion, his present performance being such a long ways behind his best record at the distance. But among the 3,000 or 4,000 spectators who witnessed Delaney's fine showing, few would have been found that evening to dissent from the popular verdict, that the victor can get away with his noted opponent again, and in much faster time than he showed, for Delaney ran within himself the whole journey, the last part at a sprinting pace. George sailed for home by the Servia the next morning. His intentions are, it is said, to become a member of the medical profession, although if Myers or Delaney go to England next year they will probably find him ready to accommodate them.

Last Friday evening a special train left the Pennsylvania Railroad depot at Jersey City, with the Brighton Beach contingent of men and horses en route for New Orleans. The first day's racing under the new regime is Saturday next, the 23d; and the results of the several contests on that day will have been wired to your coast before this letter reaches its destination. Likely enough the Crescent City will be exceedingly lively this winter, for besides Engeman's racing venture, the Louisianians, Creoles and representatives from every nation of the globe which compose its mixed population will have Hanlan and other oarsmen in a projected regatta, the great "chicken dispute" of the National Gamecock Breeders Association early in February and the usual Mardi Gras festivities, which of themselves always attract immense crowds of visitors from all parts of the country.

But in view of this new racing enterprise and the extended programmes already issued for the early spring meetings at Memphis, Nashville, Lexington, Louisville, Cincinnati, Covington, St. Louis, Chicago, etc., in addition to those at Washington, Baltimore, and the regular Eastern racing circuit, the question of the hour is "where are all the horses to come from?" At most of the later meetings of 1882, with perhaps the exception of that at Sheephead Bay, small fields were the rule rather than the exception, and when this gets to be the case the public interest quickly falls off, for the great mass of race-goers do not care to see races with only three or four contestants. It seems to be the prevalent opinion that in view of this probable scarcity of racing material for 1883, the racing asso-

ciations named above, who have, most of them, added rather extravagantly large sums to their several stakes and purses, will, some of them, get badly left, as far as any profit is concerned, and no one accuses them of racing for fun! Unless there are more young horses in training than was the case this year the sequel is almost sure to be as outlined, for the number of races run in 1882 was greatly in excess of 1881, and 1883, with the several new Rockaway, Latonia, and other associations also in the field, must certainly very largely increase these totals. Some persons, however, think that race-horses are made of iron instead of only bone and sinew, and such generally come to grief before they find out the truth. The new Latonia Jockey Club, or rather Agricultural Association of Porkopolis, has adopted the novel and pleasing feature of giving to their stakes now open the names of celebrated racers, and on their list of fixtures to be run for this spring, at their new track at Covington, Ky., directly opposite Cincinnati, we find the Hindoo, Sensation, Himyar, Ripple, Clipsetta, Harold, Glidelia Stakes, etc., following the clever precedent of the Saratoga Association last summer, when they opened two events for 1884, called the Foxhall and Iroquois Stakes respectively. This is a good idea, tending to perpetuate the memory of famous animals long after accident or death has removed them from the racing arena, and old Parole, Checkmate, Bend Or, Blackburn and Ferida, Girofle, Glenmore and other noted good ones at all distances should, and doubtless will, also have their turn. Racing stallions seem to be a drug in the market just now. Tom Bowling, Viator, Narragansett, and other sires of winners and first-class racers themselves go begging for want of purchasers. Only this week Catocotin, by Vauxhall—Weatherbelle, a fine three-year-old performer in 1881, running Hindoo to a length and a half for the Travers Stake in very fast time at high weights, was sold at auction for next to no price at all, when his breeding, size and speed is considered. But Rayon D'Or, Sensation, Hindoo, Falsetto and other untired sires, together with the three Kentuckians, Ten Broeck, Great Tom and King Ban, whose get first appeared this year, and with such great success, command, with Virgil, Glenelg, Billet, the Ill-Used, Catesby, Lever, Wanderer, Monarchist, Alarm, King Ernest, and others of the old guard, almost the exclusive attention of horsemen.

Capt. Conner's game mare Glidelia, the victress in so many great races, and as true a bit of horseflesh as ever was seen, will be bred to Rayon D'Or. The produce should race "by a large majority," as the Hon. Bardwell Slope, M. P., would say. The December meeting of the South Carolina Jockey Club was held last week at Charleston and four days' racing was had, little of interest being developed, however, and the meeting was hardly a success financially or from a racing point of view. From over the water comes news of the dispersion of a great English stud on New Years day, when the great Isomony and others will be sold to the highest bidder.

Then a cable dispatch of yesterday brought the information of the rumors afloat for some time regarding the future connection of Wm. Mr. Keene's Day, the famous trainer, with stable in England. The previous reports were generally discredited in this city, as few thought that one who had done as well as Day, with the material he has had at hand, and who has been instrumental in winning so many honors for his patron and this country, would be thrown overboard because he did not repeat in 1882 the great victories of the previous year. Why, there are owners of horses in England now who have grown gray in the pursuit of turf honors, and have yet to attain even in a single season a tithe of the successes of the white and blue spots, last year. The American stakes in England have surely won too much honor and profit on the English turf lately to bring on themselves ridicule at this late day.

R. Marsh is now the mentor of Foxhall and his stable companions, and we shall see the coming season what he can do with them.

Tom Cannon reports the Lorillard stables as doing well in the main and there are great hopes that the cherry and black will in 1883 duplicate some of the victories of 1881.

Iroquois is said to be still sound, all reports to the contrary notwithstanding, and he may win some more races yet the coming season.

Ex. Gov. Stanford is still culling some of the choicest blooded stock for his unequalled stud farm at Palo Alto. A lot recently purchased from C. S. Green's place at Babylon include Lula (2:15), May Queen (2:20), Mattie (2:20), and Gazelle (2:21), a very select coterie of stud matrons, indeed. And while on this subject we look for some entries in Eastern stakes this spring from the Stanford stable. The filly by Lever—Precious must be a good one and can doubtless more than pay her way East the coming year, and Palo Alto has others perhaps as good as she, so send on your horses, Messrs. Baldwin, Winters, Stanford, etc., and you shall have a fair field and no favor. Yours, PACIFIC.

Plymouth Rock fowls are probably the best general purpose fowls for farmers. They are not so rambling and destructive as lighter breeds, are good layers through the year, good mothers and the chicks are unusually hardy, and come early to maturity. They are the only variety with which a late hatched setting in the fall is not a misfortune. But with all their virtues they are not popular with fanciers, who prefer breeds with a few strong points rather than general excellence.

Market Report.

FLOUR—We quote: Best City Extra, \$5 60@55 75; Superfine, \$5 25@55 25; Interior Extra, \$4 75@55 25; Interior Superfine, \$3 75@54 75 hbl.

WHEAT—The demand for this grain is not very brisk. We hear of a few small transactions in No. 1 White at \$1 70. A choice lot of Milling recently changed hands at \$1 78, which is the highest figure paid for a long time.

BARLEY—The market is quite dull at present. Recent sales are: No. 1 Feed, \$1 20@51 20; do February, \$1 14; do March, \$1 25@51 25.

OATS—Feed, \$1 70@51 75; Good, \$1 75@51 80; Choice, \$1 85@51 90 75 cbl. Eastern, \$1 65 75 cbl.

RYE—Business dull. Quotable at \$1 75@51 90 for California 75 cbl, and \$1 75@51 80 75 cbl for Eastern.

FEED—Ground Barley, \$20@30 75 ton; Cracked Corn, \$27 75 ton. Shorts, \$20 75 ton. Oatmeal meal the oilworks sell to the trade at \$32 50 75 ton, less the usual discount. Middlings, \$27@28 75 ton for lots at the mill.

HAY—Alfalfa, \$13@514 50; Wheat, \$14@517 50 Wild Oat, \$13 50@516 50; Mixed, \$11@513 75 ton.

PROVISIONS—Eastern Hams, 193@21c; California Hams, 163@165c for plain, 163@17c for sugar-cured; Eastern Breakfast Bacon, 163@17c; California Smoked Bacon 15@15c for heavy and medium, and 163@165c for light and extra light; Clear Sides, 153@16c; Pork, \$20@521 for Extra Prime, \$23 50@24 for Prime Mess, \$25 50@26 for Mess, \$26 50 for clear and \$27@27 50 for extra Clear; Pigs Feet, \$16@518 75 bbl; Mess Beef, \$16 for hbls and \$8 50 for hf bbls; Extra Mess Beef, \$17 for hbls and \$8 75 for hf bbls; Family Beef, \$18@18 75 50 75 bbl; California Smoked Beef, 133@14c 75 bbl.

FRUIT—We quote: Apples, 30@50c for common and 75c@51 25 75 bx for good; Pears, \$1@525 75 bx Lemons, \$7@88 per box for Sicily and 55@56 for Malaga; California Lemons, \$2 50@283 per box; Limes, \$5@56 50 per box for Mexican; Bananas, \$2@53 50 bunch; Mexican Oranges \$25@30 75 thousand; California, \$3 50@55 for large, and \$2 50@53 50 for small boxes; Pineapples, \$8@89 75 doz. New crop Western Cranberries are offering at \$15@517 75 bbl.

THE STANFORD STAKES 1884.

A SWEEPSTAKES FOR TROTTING COLTS AND fillies of 1881, \$300 each, \$100 payable on the 1st of January, 1883, at which time the stake will close, \$100 on the 1st day of January, 1884, and \$100 thirty days before the day fixed for trotting, whatever amount up to be considered forfeit and the neglect to pay at the stipulated time incurring forfeiture of the previous payments. The race to be heats of a mile, best three in five, to harness. First to receive six-ninths of the stake in the second two months, the third one-ninth. In addition to the stakes and forfeits, the proportion of the gate money, profit on pool sales and all other sources of emolument will constitute the gross amount to be divided in the foregoing proportion. Five or more subscribers to fill. The race to be trotted in 1884, not sooner than the latter part of August. The exact date to be fixed and announced on the 1st of January, 1883, or sooner.

Race to be governed by the rules of the National Trotting Association. Nominations to be made to N. T. SMITH, Treasurer, S. P. Railroad office, Fourth and Townsend streets, or J. C. CALIN, S. M. P. Secretary, BREEDER AND SPORTSMAN office, on or before the 1st day of January, 1883. The colts must be named, the name and pedigree, so far as known, given.

Under the new trotting rules letters legibly post-marked January 1st will be eligible.

Stanford Stake, 1883.

The second payment in Stanford Stake, 1883, is due on the 1st of January next. The race to be trotted on the third Saturday in October, 1883, on the Bay District Course, day and track good, or the first Saturday thereafter, good day and track, excepting the first Saturday in November. Should the Bay District Course not be obtainable, the managers will select some other track, of which due notice will be given.

N. T. SMITH, Treasurer.

J. C. CALIN, Secretary.

THE SEMI-WEEKLY EAST OREGONIAN with pictures of Pendleton, Centerville, Weston, Umatilla City, Echo City, Pilot Rock and Heppner, to any address three months, \$1; six months, \$1 75; twelve months, \$3. EQUINE DENTISTRY.

HORSEMEN, ATTENTION.

PROF. H. W. WOODRUFF, LATE FROM Boston, is located in this city and will make the practice of veterinary dentistry a specialty. He treats no diseases but those of the teeth and mouth. Bit-bugging, driving on one rein, balking, holding, tossing the head while driving, fretting on the bit, drooling and foaming at the mouth, and many other faults are in nine out of ten cases due to bad teeth. Bad teeth not only cause bad habits, but they are the cause of such diseases as paralysis of the stomach, stomach staggers, flatulent and spasmodic colic, indigestion, dyspepsia and other kindred stomach troubles too numerous to mention, through painful and imperfect mastication of food, the sure consequence of disordered teeth. The Professor can be consulted at his office at the Fashionables, 221 Ellis street. Office hours from 8 to 9:30 a. m., 1 to 2:30 and 6:30 to 7:30 p. m., Tuesdays excepted, when he will be at Thirtieth street stables in Oakland. Orders left at the Club stables, Taylor street, and the St. George, Bush street, or by mail, will receive prompt attention. Consultation and examination gratis.

N. B.—Particular attention paid to gents' drivers.

J. O'KANE,
MANUFACTURER AND IMPORTER OF
HARNESS, SADDLES, BLANKETS,
HARNESS, SADDLES, BLANKETS,
WHIPS, BOOTS, ETC.

267 Market Street, San Francisco.

SPECIAL ATTENTION given to the manufacture of "boots" of all kinds for horses. Careful attention to all the principal trainers and horsemen on the Pacific Coast.

N. B.—My acknowledged superiority in this branch of business is largely due to careful observation and the valuable suggestions of the most skillful turfmen of the United States, the benefits of which revert to the public in the shape of a **GENUINE WELL-FITTING ARTICLE**. Sole agent for Dr. A. H. Dixon's Condition Powder and for Makinney's patent "Eureka" and "Eclipse" Toe Weights. Repairing done with neatness and dispatch. Has always on hand the finest assortment of English ladies' and gentlemen's saddles, bridles, whips, spurs, bits and 2 1/2-lb race saddles.

FITS A Leading London Physician establishes an Office in New York for the Cure of **EPILEPTIC FITS.** From Am. Journal of Medicine.

Dr. Ab. Meserole (late of London), who makes a specialty of Epilepsy, has without doubt treated and cured more cases than any other living physician. His success has simply been astonishing; we have heard of cases of over 20 years' standing successfully cured by him. He has published a work on this disease, which he sends with a large bottle of his wonderful cure free to any sufferer who may send their express and P. O. Address. We advise any one wishing a cure to address Dr. AB. MESEROLE, No. 95 John St., New York.
